With the help of this tool, you may better prepare for the FCP - FortiManager 7.4 Administrator

(FCP_FMG_AD-7.4) test.

Fortinet FCP_FMG_AD-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Device Manager: In this domain, the focus is on how to register devices within ADOMs, implement configuration changes using scripts, and troubleshoot using the revision history.
Topic 2	<ul style="list-style-type: none">• Administration: This section covers how to understand FortiManager capabilities, perform initial configurations, and set up administrative domains (ADOMs).
Topic 3	<ul style="list-style-type: none">• Advanced Configuration: This domain explains FortiManager's high availability (HA), configures FortiGuard services and works with the global database ADOM.
Topic 4	<ul style="list-style-type: none">• Policy and Objects: This section deals with how to manage policies and objects, oversee ADOM revisions, configure workspace mode, and conduct policy imports and installations.
Topic 5	<ul style="list-style-type: none">• Troubleshooting: This section covers how to familiarize with FortiManager deployment scenarios and troubleshoot issues related to imports, installations, device-level, ADOM-level, and system-level concerns.

Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q35-Q40):

NEW QUESTION # 35

Which two statements about Security Fabric integration with FortiManager are true? (Choose two.)

- A. The Security Fabric license, group name, and password are required for the FortiManager Security Fabric integration.
- B. The Security Fabric settings are part of the device-level settings.
- C. The Fabric View module enables you to view the Security Fabric ratings for Security Fabric devices.
- D. The Fabric View module enables you to generate the Security Fabric ratings for Security Fabric devices.

Answer: B,C

NEW QUESTION # 36

An administrator created a new global policy package that includes header and footer policies and then assigned it to an ADOM. What are two outcomes of this action? (Choose two.)

- A. After you assign the global policy package to an ADOM, the impacted policy packages become hidden in that ADOM.
- B. You must manually move the header and footer policies after the policy assignment.
- C. To assign another global policy package later to the same ADOM, you must unassign this policy first.
- D. You can edit or delete all the global objects in the global ADOM.

Answer: C,D

NEW QUESTION # 37

You are moving managed FortiGate devices from one ADOM to a new ADOM. Which statement correctly describes the expected result?

- A. Policy packages will be imported into the new ADOM automatically.
- B. Any unused objects from a previous ADOM are moved to the new ADOM automatically.
- C. The shared policy package will not be moved to the new ADOM automatically.
- D. The shared device settings will be installed automatically.

Answer: C

NEW QUESTION # 38

Refer to the exhibit.

A junior administrator is troubleshooting a FortiManager connectivity issue that is occurring with a managed FortiGate device. Given the FortiManager device manager settings shown in the exhibit, what can you conclude from this scenario?

- A. The administrator must refresh the device to restore connectivity.
- **B. The administrator can reclaim the FortiGate to FortiManager protocol (FGFM) tunnel to get the device online.**
- C. The administrator recently restored a FortiManager configuration file.
- D. FortiManager lost internet connectivity, therefore, the device appears to be down.

Answer: B

Explanation:

* Option C: The administrator can reclaim the FortiGate to FortiManager protocol (FGFM) tunnel to get the device online. This is the correct answer. The exhibit shows a device in "Unknown" status, which indicates that the FortiManager cannot currently communicate with the device. Reclaiming the FGFM tunnel will help to restore connectivity by re-establishing the management tunnel between the FortiManager and the FortiGate.

Explanation of Incorrect Options:

* Option A: The administrator must refresh the device to restore connectivity is incorrect because refreshing the device is unlikely to solve the connection issue when the status is "Unknown."

* Option B: FortiManager lost internet connectivity, therefore, the device appears to be down is incorrect because FortiManager does not require internet connectivity to manage a FortiGate; it needs a direct connection to the device.

* Option D: The administrator recently restored a FortiManager configuration file is incorrect because the exhibit does not indicate a recent restoration of configuration.

FortiManager References:

* Refer to "FortiManager Administration Guide" and the section on "Device Management and Connectivity" for more information about reclaiming FGFM tunnels.

NEW QUESTION # 39

An administrator, Trainer, who is assigned the Super_User profile, is trying to approve a workflow session that was submitted by another administrator, Student. However, Trainer is unable to approve the workflow session.

What can prevent an admin account that has Super_User rights over the device from approving a workflow session?

- A. Trainer must close Student's workflow session before approving the request.
- B. Trainer must first create their own workflow session to approve student session.
- **C. Trainer is not a part of workflow approval group.**
- D. Trainer does not have full rights over this ADOM.

Answer: C

Explanation:

Even with Super_User rights, the ability to approve workflow sessions typically requires membership in a specific workflow approval group. If Trainer is not part of this group, they will not be able to approve the workflow session.

NEW QUESTION # 40
