P.S. Free & New 300-415 dumps are available on Google Drive shared by TestInsides: <https://drive.google.com/open?id=191JJlnOnBUg4JjaA0voY6zDV89U4A2Mn>

All kinds of exams are changing with dynamic society because the requirements are changing all the time. To keep up with the newest regulations of the 300-415 exam, our experts keep their eyes focusing on it. Our 300-415 exam torrent are updating according to the precise of the real exam. Our 300-415 Test Prep to help you to conquer all difficulties you may encounter. Once you choose our 300-415 quiz torrent, we will send the new updates for one year long, which is new enough to deal with the exam for you and guide you through difficulties in your exam preparation.

Cisco 300-415 certification exam is part of the Cisco Certified Specialist - Enterprise SD-WAN Implementation certification track. Implementing Cisco SD-WAN Solutions certification track is designed to provide IT professionals with the knowledge and skills required to implement and manage Cisco SD-WAN solutions. Implementing Cisco SD-WAN Solutions certification track includes three exams, including the Cisco 300-415 Exam, and is intended for IT professionals who are responsible for the implementation and management of SD-WAN solutions in their organizations.

300-415 Exam Tutorials | 300-415 Exam Objectives Pdf

Our TestInsides 300-415 exam certification training material is the collection of experience and innovation results of highly certified IT professionals in IT industry. We guarantee that after you buy TestInsides 300-415 certification exam training materials, we will provide free renewal service for one year. If 300-415 Exam Certification training materials have any quality problem or you fail 300-415 exam certification, we will give a full refund unconditionally.

Certification Paths

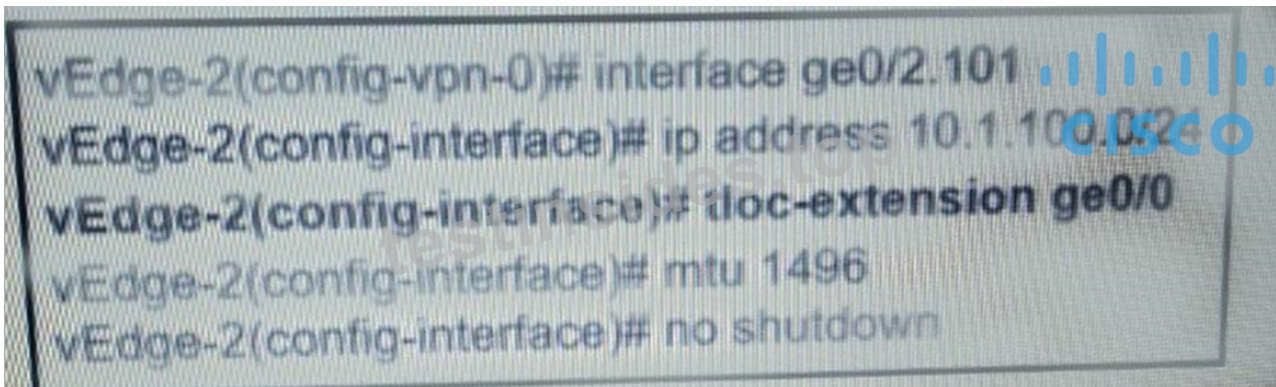

The Cisco ENSDWI 300-415 exam assesses one's knowledge in using REST API, multicast, WAN Edge, SD-WAN architecture, etc. It is one of the options the candidate can choose from when completing the CCNP Enterprise certification path. This step is required after passing the mandatory core exam, ENCOR 350-401. Apart from this, 300-415 is also associated with the Cisco Certified Specialist – Enterprise SD-WAN Implementation certificate.

If you are looking for an exam that will help you validate your knowledge and skills in designing, deploying, configuring, and managing Cisco SD-WAN solutions in an extensive live network, then the Cisco 300-415 is the option that you should go for. It will also help you learn how to accomplish migration from legacy WAN to SD-WAN. This test is created to confirm your ability to configure routing protocols effectively in the branch and data center. It also measures your ability to implement data, advanced control, and application-aware policies. This particular exam is designed for the systems installers, system administrators, solutions designers, network administrators, and system integrators.

Cisco Implementing Cisco SD-WAN Solutions Sample Questions (Q310-Q315):

NEW QUESTION # 310

Refer to the exhibit.

What binding is created using the tloc-extension command?

- A. between ge 0/2.101 of port-type service and ge 0/0 of port-type service
- B. between ge 0/2.101 of port-type transport and ge 0/0 of port-type service
- C. between ge 0/2.101 of port-type service and ge 0/0 of port-type transport
- D. between ge 0/2.101 of port-type transport and ge 0/0 of port-type transport

Answer: D

Explanation:

tloc-extension
Bind this interface, which connects to another vEdge router at the same physical site, to the local router's WAN transport interface (on vEdge routers only).

NEW QUESTION # 311

A network administrator is creating an OMP feature template from the vManage GUI to be applied to WAN edge routers. Which configuration attribute will avoid the redistribution of the routes back into the OMP from the LAN side?

- A. configure "Overlay AS Number"
- B. configure "ECMP limit"
- C. configure "Send Backup Paths"
- D. configure "Number of Paths Advertised per Prefix"

Answer: A

Explanation:

If you configure the same **overlay AS number** on multiple vEdge routers in the overlay network, all these routers are considered to be part of the same AS, and as a result, they do not forward any routes that contain the overlay AS number. This mechanism is an additional technique for **preventing BGP routing loops** in the network.

NEW QUESTION # 312

What is the minimum Red Hat Enterprise Linux operating system requirement for a Cisco SD- WAN controller deployment via KVM?

- A. RHEL 6.7
- B. RHEL 4.4
- **C. RHEL 7.5**
- D. RHEL 6.5

Answer: C

Explanation:

<https://www.cisco.com/c/en/us/td/docs/routers/sdwan/release/notes/compatibility-and-server-recommendations.pdf>

NEW QUESTION # 313

Refer to the exhibit.

Refer to the exhibit. An administrator is configuring a policy in addition to an existing hub-and-spoke policy for two sites that should directly communicate with each other. How is this policy configured?

- A. import existing topology
- B. hub-and-spoke
- **C. custom control (route and TLOC)**
- D. mesh

Answer: C

Explanation:

https://www.cisco.com/c/en/us/td/docs/routers/sdwan/configuration/policies/vedge/policies-book/controlpolicies.html#id_107219

NEW QUESTION # 314

What is a requirement for deployment of on-premises vBond controllers through the Cisco Plug and Play Connect process?

- A. Internet connectivity from vManage
- B. a defined controller profile
- **C. a DNS name that identifies vBond**
- D. a CSV The that contains ail controllers

Answer: C

Explanation:

Deploying on-premises vBond controllers through the Cisco Plug and Play Connect process requires specific configurations to ensure proper identification and communication between the controllers and the devices.

* **DNS Name:** A DNS name that identifies the vBond orchestrator is crucial. This DNS name allows devices to dynamically resolve the IP address of the vBond orchestrator. This is especially important in environments where IP addresses may change, ensuring that devices can always reach the vBond orchestrator through its DNS name.

* **Process:**

* When a device comes online, it contacts the Plug and Play server to get the necessary information for connecting to the SD-WAN fabric.

* The DNS name is used to resolve the vBond's IP address, enabling secure and reliable communication between the device and the
