ISQI ISTQB Certified Tester Foundation Level - Automotive Software Tester Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which statement regarding the MiL design and use is true?

- A. Typically, the test for the coned behavior of a control unit's functions is performed on a component Hi.
- B. In contrast to the MiL and Si test environments, pausing or stopping is possible in a HiL test environment thanks to a real the capable computer
- C. The HiL test environment is as complex as a MiL or SiL test environment with regards to the complexity of its parts
- D. The objective of using a Hi test environment is mainly to find non-functional errors in the model

Answer: B

Explanation:
Explanation

This is due to the fact that HiL test environments are based on simulated models and the hardware can be paused or stopped when necessary. This allows for more precise and efficient testing of the control unit's functions.

NEW QUESTION # 34

Which statement regarding the influence of the ASIL on test techniques, test types and test depths is true?

- A. Depending on the determined ASIL, ISO 26262 recommends the execution of different test design techniques and test types. Given this, the standard for higher ASILs usually

Latest ISQI CTFL-AcT Most Reliable Questions

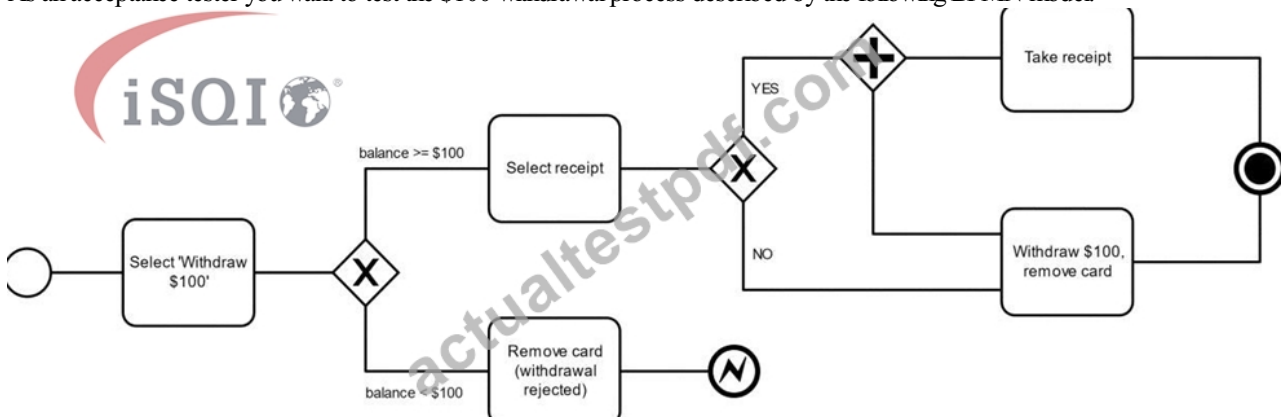

The secret that ActualtestPDF helps many candidates pass CTFL-AcT exam is ISQI exam questions attentively studied by our professional IT team for years, and the detailed answer analysis. We constantly updated the CTFL-AcT Exam Materials at the same time with the exam update. We try our best to ensure 100% pass rate for you.

To prepare for the ISQI CTFL-AcT Exam, candidates can take advantage of various training programs and resources provided by ISTQB accredited training providers. These resources include training courses, study materials, sample exams, and practice tests. By investing time and effort in preparing for the exam, candidates can enhance their knowledge and skills in acceptance testing and increase their chances of passing the exam on their first attempt.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q25-Q30):

NEW QUESTION # 25

As an acceptance tester you want to test the \$100 withdrawal process described by the following BPMN model.

You would like to achieve decision coverage. Consider the following test cases: Test 1: balance = \$100, receipt = YES Test 2: balance = \$99 Test 3: balance = \$120, receipt = NO Test 4: balance = \$2500, receipt = YES Which of the following is the minimal set of test cases allowing to achieve full decision coverage?

- A. Test 1, Test 2, Test 4
- B. Test 1, Test 2
- C. Test 2, Test 3
- **D. Test 1, Test 2, Test 3**

Answer: D

NEW QUESTION # 26

Which one of the following statements defines beta testing BEST?

- A. Beta testing is performed by developers at the customer's location.
- B. During beta testing, genuine users define the acceptance criteria for various realistic configurations.
- **C. Beta testers discover defects in the product that escaped during the development process.**
- D. Beta testing takes place early in the development process to acquire feedback from the market.

Answer: C

NEW QUESTION # 27

Which of the following sentences explains BEST how business process and business rule modeling can be used for ATDD?

- **A. In an ATDD approach, testers use business process and business rule models to generate acceptance tests.**
- B. In an ATDD approach, process models are created for initial test design but are not maintained afterwards.
- C. In an ATDD approach, business process models replace acceptance criteria.
- D. In an ATDD approach, business process/rule models must be created before the project starts.

Answer: A

NEW QUESTION # 28

As a tester you are part of a development team for health monitoring system to record and synchronize various health parameters, calculate health score and provide practical advice on how to maintain and improve health. You are asked to review the acceptance criteria for the following user story:

US23; As a user of the system. I can monitor my blood pressure and obtain alerts in case of excessive pressure, in order to prevent the risk associated with hypertension.

Which of the following is NOT a good example of an acceptance criterion for this requirement?

- A. The monitoring system displays the heart rate together with the blood pressure
- **B. The system should be developed using Java script framework to allow fast response times**
- C. People with hypertension are advised to get their blood pressure checked at least thrice a week
- D. The alert thresholds depend on the following user's personal settings: age, weight and gender

Answer: B

Explanation:

Acceptance criteria describe what the system must do to fulfill a requirement from the user or business perspective. They must be observable, testable, and relevant to the business outcome or expected behavior.

In this scenario, the user story is about monitoring blood pressure and receiving alerts for excessive pressure.

The acceptance criteria should focus on system behavior, thresholds, and how alerts are triggered based on user settings.

Option D is not a good acceptance criterion because:

It specifies a technical implementation detail (JavaScript framework), which is not the concern of acceptance testing.

Acceptance criteria should not prescribe how the system is built, but what it must do from a business or user point of view.

Other options (A, B, and C) all reflect testable and behavior-focused outcomes linked to the user story's goal.

D). The system should be developed using JavaScript framework to allow fast response times

NEW QUESTION # 29

Which tool fits the mentioned acceptance test activities BEST?

- A. Requirements management tools for managing acceptance test execution campaigns.
- B. Test management and automation tools for business process model-based acceptance test generation.
- **C. Business process management tools for modeling business processes and rules.**
- D. Model-based testing tools for managing incidents.

Answer: C
