## Trusting Reliable EAEP2201 Reliable Test Bootcamp Is The Quickest Way to Pass Enterprise Administration Professional 2201

The quality of Itcerttest product is very good and also have the fastest update rate. If you purchase the training materials we provide, you can pass Esri Certification EAEP2201 Exam successfully.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q55-Q60):

### NEW QUESTION # 55

An organization expects a large influx of users who use the standard analysis tools in the portal Map Viewer. The organization is concerned with the hosting server's available resources. Which system resource should be closely monitored?

- **A. CPU utilization**

- B. Network utilization
- C. Disk activity

**Answer: A**

Explanation:

When users perform standard analysis tasks in the portal Map Viewer, the hosting server executes geoprocessing operations that are computationally intensive. These operations require significant CPU resources. Monitoring CPU utilization helps ensure that the server can handle the increased load without performance degradation.

While disk activity and network utilization are important, they are less directly impacted by standard analysis tasks compared to CPU usage. Therefore, CPU utilization is the primary resource to monitor in this scenario.

Reference Source: ArcGIS Enterprise documentation on system performance monitoring.

#### NEW QUESTION # 56

A GIS analyst is running raster analysis in the ArcGIS Enterprise portal Map Viewer. The input data is an image layer, but the output of the raster analysis is a feature layer.

Which ArcGIS Server will host the output feature service?

- A. ArcGIS Image Hosting Server site
- B. ArcGIS Raster Analytics Server site
- C. ArcGIS Hosting Server site

**Answer: C**

Explanation:

In ArcGIS Enterprise, when performing raster analysis that results in feature data (e.g., vector outputs), the ArcGIS Hosting Server is responsible for hosting the resulting feature services. The Raster Analytics Server processes the raster data, and the output is then stored in the ArcGIS Data Store associated with the Hosting Server, which subsequently serves the feature layer.

The Image Hosting Server is primarily used for hosting large imagery datasets and does not handle feature services. The Raster Analytics Server conducts the analysis but does not host the output services.

Reference Source: ArcGIS Enterprise documentation on configuring and deploying raster analytics

#### NEW QUESTION # 57

A GIS administrator has a group of users who share maintenance responsibilities for a critical application.

The administrator needs to allow all users to edit the application without transferring ownership.

Which option should the administrator use?

- A. A shared update group
- B. An administrative group
- C. A collaboration group
- D. A public group

**Answer: A**

Explanation:

A shared update group allows group members to edit each other's items without needing to transfer ownership. This is ideal for collaborative editing and shared responsibility for applications, maps, or dashboards.

From Esri documentation:

"Shared update groups allow multiple members to update items shared with the group, even if they do not own the items."

\* Option B doesn't exist as a group type in ArcGIS Enterprise.

\* Option C allows viewing, but not editing others' content.

\* Option D applies to distributed collaboration, not shared editing.

Reference: ArcGIS Enterprise - Group Settings for Collaborative Management

#### NEW QUESTION # 58

An ArcGIS Enterprise deployment is completely internal and does not have access to the internet. How should the organization find patches and updates for the deployment components?

- A. Refer to the Patches and Service Pack page on the Esri Support website
- **B. Run the patch notification bat utility from the command line**
- C. Open the Check For Updates option on the machine where ArcGIS Server is installed

**Answer: B**

Explanation:

For environments without internet access, the organization can use the patchnotification.bat utility to check for available patches and updates. This utility can be run from the command line and provides information about the current patch status of the ArcGIS Enterprise components. Administrators can then manually download the necessary patches from another machine with internet access and transfer them to the internal environment for installation.

Reference Source: ArcGIS Enterprise documentation on checking for and installing software patches and updates

#### NEW QUESTION # 59

A GIS administrator needs to change the ownership of a shared update group to a different user. The administrator receives an error message: "Unable to reassign the group at this time." What is causing this error?

- **A. The user does not have the correct privileges**
- B. It is not possible to reassign ownership of shared update groups
- C. The sharing settings on the group are configured incorrectly

**Answer: A**

Explanation:

The error message "Unable to reassign the group at this time" typically occurs when attempting to transfer ownership of a shared update group to a user who lacks the necessary privileges. Specifically, the new owner must have the privilege to create and own groups. If the user's role does not include this privilege, the ownership transfer will fail. To resolve this, ensure that the user has a role (either default or custom) that includes the privilege to create groups.

#### NEW QUESTION # 60

.....

EAEP2201 exam certification is an international recognition, which is equivalent to a passport to enter a higher position. The EAEP2201 exam materials and test software provided by our Itcerttest are developed by experienced IT experts, which have been updated again and again. Now you just take dozens of Euro to have such Reliable EAEP2201 Test Materials. Once you get the certification you may have a higher position and salary.
