

EAEP2201 Valid Study Notes | Latest EAEP2201 Exam Objectives

NC BLET STATE EXAM OBJECTIVES 2023/2024 LATEST REVIEW GRADED A+

List four ways to submit criminal fingerprint cards and final disposition reports to the Identification Section of the State Bureau of Investigation (SBI) - ANSWER-First Class Mail
Courier Service
In Person
Electronic Transmission (live-scan)

The most reliable form of identification - ANSWER-fingerprints

Fingerprints are the primary source for... - ANSWER-Criminal History

A report of disposition and fingerprint cards should be sent to the AOC and then to the SBI by who? - ANSWER-Clerk of Court or Magistrate

The amount of time a report of disposition and fingerprint cards should be sent to AOC and then to the SBI - ANSWER-60 days

When to fingerprint and photograph - ANSWER-arrested or committed to detention facility
committed to imprisonment upon conviction of a crime
convicted of a felony
person arrested for impaired driving or revoked license based on impaired driving and cannot be identified from a valid form of ID

You can only photograph a person when... - ANSWER-they are cited for motor vehicle violation who cannot produce a valid ID (must be waist up and destroyed after final disposition)

To search for any fugitive warrants all applicant fingerprints are ran through... - ANSWER-NCIC

When can you fingerprint a juvenile? - ANSWER-10+ years old
committed a non-divertible offense
complaint has been prepared for filing as a petition
juvenile is in custody of LEO or DJJ
OR
10+ years old
juvenile is adjudicated delinquent for a felony

What are the two types of fingerprints taken - ANSWER-rolled prints (from nail to nail)
plain for fixed impression (all 4 fingers printed at one time)

Free Esri EAEP2201 exam questions demo download facility, affordable price, 100 percent Esri EAEP2201 exam passing money back guarantee. All these three Esri EAEP2201 exam questions features are designed to help you in Esri EAEP2201 Exam Preparation and enable you to pass the final Esri EAEP2201 certification exam easily.

Esri EAEP2201 Certification Exam is a comprehensive exam that covers a wide range of topics related to the administration of enterprise GIS systems. EAEP2201 exam covers topics such as enterprise geodatabase design, administration and maintenance, web GIS deployment and management, server and portal administration, and security management. EAEP2201 exam also includes questions related to best practices for managing enterprise GIS systems, as well as troubleshooting and performance tuning.

Esri EAEP2201 Exam is an important certification for ArcGIS Enterprise administrators who want to demonstrate their expertise in managing complex geospatial infrastructure. Achieving this certification requires a deep understanding of ArcGIS technology, as well as practical experience in configuring and maintaining ArcGIS-based solutions. Esri EAEP2201 certification holders are recognized as experts in their field and are well-positioned to advance in their careers.

Latest EAEP2201 Exam Objectives - New EAEP2201 Real Test

In a knowledge-based job market, learning is your quickest pathway, your best investment. Knowledge is wealth. Modern society needs solid foundation, broad knowledge, and comprehensive quality of compound talents. It is our goal that you study for a short time but can study efficiently. At present, thousands of candidates have successfully passed the EAEP2201 Exam with less time input. In fact, there is no point in wasting much time on invalid input. As old saying goes, all work and no play makes jack a dull boy. Our EAEP2201 certification materials really deserve your choice. Contact us quickly. We are waiting for you.

Esri Enterprise Administration Professional 2201 Sample Questions (Q47-Q52):

NEW QUESTION # 47

In a multi-machine ArcGIS Server site, the following is observed:

- * Random services missing on one server but reappear later
- * Intermittent service failures
- * Warnings and severe errors like:
 - * Failed to write heartbeat
 - * Error synchronizing with config store
 - * Failed to return all folder configurations
 - * Failed to return all services configurations in folder

What should the administrator review?

- A. Network DNS cache
- B. ArcGIS Server virtual machine resources
- C. ArcGIS Server patches applied
- D. Specification for the file share location

Answer: D

Explanation:

These errors point to problems accessing the configuration store, which is commonly stored on a shared file location across ArcGIS Server machines. Intermittent access, latency, or I/O issues with the shared drive can cause synchronization failures and service visibility problems.

From Esri documentation:

"If ArcGIS Server cannot reliably access the configuration store, errors such as heartbeat failure, sync issues, and missing service configurations may occur. Always ensure the shared file location is on a reliable, supported file system with proper permissions and stability."

* Option A (VM resources) might impact general performance but not sync reliability.

* Option C (patches) is important but doesn't fix shared drive instability.

* Option D is not relevant in this context.

NEW QUESTION # 48

A client has an internet-accessible ArcGIS Enterprise deployment with the Web Adaptors in the DMZ, and the remaining components are on an internal network behind a firewall. A user on the internet must access a web map in that environment. Which ports must be open in the firewall between the DMZ and the internal network?

- A. 80 and 443
- B. 443 and 6443
- C. 6443 and 7443
- D. 2443 and 6443

Answer: C

Explanation:

Web Adaptors in the DMZ must forward requests to internal components (Portal and Server). These internal services operate over HTTPS via ports:

- * 7443 for Portal for ArcGIS
- * 6443 for ArcGIS Server

Therefore, the firewall must allow traffic over ports 6443 and 7443 from the Web Adaptors (DMZ) to the respective internal services.

From ArcGIS Enterprise security documentation:

"When using Web Adaptors in the DMZ, make sure ports 6443 and 7443 are open between the Web Adaptors and the internal ArcGIS Server and Portal components respectively."

* Option B is partially correct but leaves out Portal (7443).

* Option C is for HTTP/HTTPS access from the public, not internal communications.

* Option D includes the Data Store admin port (2443), which isn't required here.

Reference: ArcGIS Enterprise - Firewalls, Ports, and DMZ Configuration

NEW QUESTION # 49

A GIS administrator is publishing a feature service. All 2,400 features in the dataset must be able to be returned from a single request to the service.

Which action should the administrator perform?

- A. Adjust pooling to handle the request
- B. Enable cached drawing mode
- C. Use service defaults for publishing
- D. Increase the max record count

Answer: D

Explanation:

By default, feature services limit the number of records returned in a single request (usually set to 1,000).

To allow all 2,400 features to be returned in one call, the administrator needs to increase the "Maximum number of records returned by the server" (maxRecordCount) setting during or after publishing.

From the ArcGIS Server documentation:

"The maxRecordCount property defines the number of records returned by the server in a single request. To return all features, this value must be increased accordingly."

* Option A (adjust pooling) relates to concurrency and scalability, not data retrieval limits.

* Option C would keep the default setting of 1,000, which would not meet the requirement.

* Option D relates to visual performance, not record retrieval.

Reference: ArcGIS Server - Feature Service Settings and Tuning for Performance

NEW QUESTION # 50

An organization configures an ArcGIS Enterprise portal to allow single sign-on using Integrated Windows Authentication (IWA).

Configuration includes:

* All accounts in the Active Directory group gisusers are added to the portal

* Existing users can sign in without entering credentials. However, new employees assigned to the same gisusers group cannot log in, create content, or join groups. What is causing this issue for the new employees?

- A. Their Active Directory accounts have been assigned an incompatible default user type
- B. The Web Adaptor cache must be cleared
- C. Their Active Directory accounts have not had sufficient time to sync to the portal
- D. Their Active Directory accounts have not been added to the portal

Answer: D

Explanation:

For IWA authentication, Active Directory users are not automatically added to the ArcGIS Enterprise portal.

They must either be:

* Manually added as members, or

* Automatically created at first login if auto-creation is enabled.

Since the new users are assigned to the gisusers group but cannot sign in or create content, it's clear that their accounts have not yet been added to the portal.

From ArcGIS Enterprise documentation:

"Integrated Windows Authentication (IWA) allows users to sign in with their Windows credentials. However, users must still be members of the portal. You can manually add users or enable automatic account creation during login."

* Option B is invalid since default user type settings do not prevent login.

* OptionC is incorrect because synchronization is not time-based-it's account-creation dependent.
Reference: ArcGIS Enterprise - Managing Portal Members and Identity Store Integration

NEW QUESTION # 51

A GIS administrator team must perform system maintenance over the weekend. The team must ensure that members do not add, publish, or edit any items in ArcGIS Enterprise. Members still need the ability to access and view items as necessary. Which action should the team perform?

- A. Clone the organization's content to a standby deployment
- B. Disable ArcGIS Web Adaptor
- C. Place ArcGIS Enterprise in read-only mode
- D. Change members' user role to Viewer

Answer: C

Explanation:

The correct solution is to place ArcGIS Enterprise in read-only mode. This is an administrative function designed specifically to prevent changes to content or configuration while still allowing users to view and access existing items.

From the official ArcGIS Enterprise documentation:

"Read-only mode allows an administrator to restrict changes to the portal. When enabled, no users (including administrators) can create, update, or delete items, groups, or users. However, users can still search for and view items, access content, and use apps and services." This feature is typically used during maintenance windows or before performing disaster recovery tasks to preserve system state.

* Option B is incorrect because changing user roles to Viewer would not prevent content changes by administrators or other roles with publishing privileges.

* Option C refers to cloning, which is not a preventive or temporary access control measure, but rather a method for standby deployments or replication.

* Option D (disabling the Web Adaptor) would disrupt access entirely, which does not match the requirement to allow viewing.

NEW QUESTION # 52

.....

We all know that it is of great importance to pass the EAEP2201 exam and get the certification for someone who wants to find a good job in internet area. I will recommend our study materials to you. The EAEP2201 test materials are mainly through three learning modes, Pdf, Online and software respectively. Among them, the software model is designed for computer users, can let users through the use of Windows interface to open the EAEP2201 Test Prep of learning.
