

# Dumps Nutanix NCP-US-6.5 Torrent - Updated NCP-US-6.5 Test Cram

2026 Latest TorrentVCE NCP-US-6.5 PDF Dumps and NCP-US-6.5 Exam Engine Free Share: <https://drive.google.com/open?id=1f7u095OKWcdJqtV1-XfLWpC8YcI2sNTk>

The product we provide with you is compiled by professionals elaborately and boosts varied versions which aimed to help you learn the NCP-US-6.5 study materials by the method which is convenient for you. They check the update every day, and we can guarantee that you can get a free update service from the date of purchase. Once you have any questions and doubts about the NCP-US-6.5 Exam Questions we will provide you with our customer service before or after the sale, you can contact us if you have question or doubt about our exam materials and the professional personnel can help you solve your issue about using NCP-US-6.5 study materials.

We are a team of the exam questions providers of Nutanix braindumps in the IT industry that ensure you to pass actual test 100%. We have experienced and professional IT experts to create the latest NCP-US-6.5 Exam Questions And Answers which are approach to the real NCP-US-6.5 practice test. Try download the free dumps demo.

## 2026 100% Free NCP-US-6.5 –Reliable 100% Free Dumps Torrent | Updated NCP-US-6.5 Test Cram

The aim of Nutanix NCP-US-6.5 test torrent is to help you optimize your IT technology and get the NCP-US-6.5 certification by offerring the high quality and best accuracy NCP-US-6.5 study material. If you want to pass your NCP-US-6.5 Actual Exam with high score, TorrentVCE NCP-US-6.5 latest exam cram is the best choice for you. The high hit rate of NCP-US-6.5 test practice will help you pass and give you surprise.

### Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Troubleshoot issues related to Nutanix Files</li><li>• Explain Data Management processes for Files and Objects</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Configure and Utilize Nutanix Unified Storage</li><li>• Identify the steps to deploy Nutanix Objects</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• Troubleshoot issues related to Nutanix Objects</li> <li>• Troubleshoot issues related to Nutanix Volumes</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Configure Nutanix Objects</li> <li>• Describe how to monitor performance and usage</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Deploy and Upgrade Nutanix Unified Storage</li> <li>• Perform upgrades</li> <li>• maintenance for Files</li> <li>• Objects implementations</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• Given a scenario, configure shares, buckets, and or Volume Groups</li> <li>• Troubleshoot a failed upgrade for Files</li> <li>• Objects</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>• Configure Nutanix Files with advanced features</li> <li>• Determine the appropriate method to ensure data availability</li> <li>• recoverability</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>• Identify the steps to deploy Nutanix Files</li> <li>• Given a scenario, determine product and sizing parameters</li> </ul>

## Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q75-Q80):

### NEW QUESTION # 75

An organization currently has two Objects instances deployed between two sites. Both instances are managed via manage the same Prism Central to simplify management.

The organization has a critical application with all data in a bucket that needs to be replicated to the secondary site for DR purposes. The replication needs to be asynchronous, including al delete the marker versions.

- A. With Object Browser, upload the data at the destination site.
- B. Leverage the Objects Baseline Replication Tool from a Linux VM
- C. Use a protection Domain to replicate the objects Volume Group.
- **D. Create a Bucket replication rule, set the destination Objects instances.**

**Answer: D**

Explanation:

The administrator can achieve this requirement by creating a bucket replication rule and setting the destination Objects instance.

Bucket replication is a feature that allows administrators to replicate data from one bucket to another bucket on a different Objects instance for disaster recovery or data migration purposes.

Bucket replication can be configured with various parameters, such as replication mode, replication frequency, replication status, etc. Bucket replication can also replicate all versions of objects, including delete markers, which are special versions that indicate that an object has been deleted. By creating a bucket replication rule and setting the destination Objects instance, the administrator can replicate data from one Objects instance to another asynchronously, including all delete markers and versions. References: Nutanix Objects User Guide, page 19; Nutanix Objects Solution Guide, page 9 Nutanix Objects, part of Nutanix Unified Storage (NUS), supports replication of buckets between Object Store instances for disaster recovery (DR). The organization has two Objects instances across two sites, managed by the same Prism Central, and needs to replicate a bucket's data asynchronously, including delete marker versions, to the secondary site.

Analysis of Options:

\* Option A (With Object Browser, upload the data at the destination site): Incorrect. The Object Browser is a UI tool in Nutanix Objects for managing buckets and objects, but it is not designed for replication. Manually uploading data to the destination site does not satisfy the requirement for asynchronous replication, nor does it handle delete marker versions automatically.

\* Option B (Leverage the Objects Baseline Replication Tool from a Linux VM): Incorrect. The Objects Baseline Replication Tool is not a standard feature in Nutanix Objects documentation. While third-party tools or scripts might be used for manual replication, Nutanix provides a native solution for bucket replication, making this option unnecessary and incorrect for satisfying the requirement.

\* Option C (Use a Protection Domain to replicate the Objects Volume Group): Incorrect. Protection Domains are used in Nutanix for protecting VMs and Volume Groups (block storage) via replication, but they do not apply to Nutanix Objects. Objects uses bucket replication rules for DR, not Protection Domains.

\* Option D (Create a Bucket replication rule, set the destination Objects instance): Correct. Nutanix Objects supports bucket replication rules to replicate data between Object Store instances asynchronously. This feature allows the organization to replicate the bucket to the secondary site, including all versions (such as delete marker versions), as required. The replication rule can be configured in Prism Central, specifying the destination Object Store instance, and it supports asynchronous replication for DR purposes.

Why Option D?

Bucket replication in Nutanix Objects is the native mechanism for asynchronous replication between Object Store instances. It supports replicating all versions of objects, including delete marker versions (which indicate deleted objects in a versioned bucket), ensuring that the secondary site has a complete replica of the bucket for DR. Since both Object Store instances are managed by the same Prism Central, the administrator can easily create a replication rule to meet the requirement.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Administration Guide (available on the Nutanix Portal):

"Nutanix Objects supports asynchronous bucket replication for disaster recovery. To replicate a bucket to a secondary site, create a bucket replication rule in Prism Central, specifying the destination Object Store instance. The replication rule can be configured to include all versions, including delete marker versions, ensuring that the secondary site maintains a complete replica of the bucket for DR purposes."

:

Nutanix Objects Administration Guide, Version 4.0, Section: "Bucket Replication for Disaster Recovery" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Objects Replication Features".

## NEW QUESTION # 76

An administrator has planned to copy any large files to a Files share through the RoboCopy tool. While moving the data, the copy operation was interrupted due to a network bandwidth issue. Which command option resumes any interrupted copy operation?

- A. robocopy with the /z option
- B. robocopy with the /c option
- C. robocopy with the /r option
- D. robocopy with the /s option

**Answer: A**

Explanation:

Nutanix Files, part of Nutanix Unified Storage (NUS), provides CIFS (SMB) shares that can be accessed by Windows clients. RoboCopy (Robust File Copy) is a Windows command-line tool commonly used to copy files to SMB shares, such as those provided by Nutanix Files. The administrator is copying large files to a Files share using RoboCopy, but the operation was interrupted due to a network bandwidth issue. The goal is to resume the interrupted copy operation without restarting from scratch.

Analysis of Options:

\* Option A (robocopy with the /c option): Incorrect. The /c option is not a valid RoboCopy option.

RoboCopy options typically start with a forward slash (e.g., /z, /s), and there is no /c option for resuming interrupted copies.

\* Option B (robocopy with the /s option): Incorrect. The /s option in RoboCopy copies subdirectories (excluding empty ones) but does not provide functionality to resume interrupted copy operations. It is used to define the scope of the copy, not to handle interruptions.

\* Option C (robocopy with the /z option): Correct. The /z option in RoboCopy enables "restartable mode," which allows the tool to resume a copy operation from where it left off if it is interrupted (e.g., due to a network issue). This mode is specifically designed for copying large files over unreliable networks, as it checkpoints the progress and can pick up where it stopped, ensuring the copy operation completes without restarting from the beginning.

\* Option D (robocopy with the /r option): Incorrect. The /r option in RoboCopy specifies the number of retries for failed copies (e.g., /r:3 retries 3 times). While this can help with transient errors, it does not resume an interrupted copy operation from the point of interruption-it retries the entire file copy, which is inefficient for large files.

Why Option C?

The /z option in RoboCopy enables restartable mode, which is ideal for copying large files to a Nutanix Files share over a network that may experience interruptions. This option ensures that if the copy operation is interrupted (e.g., due to a network bandwidth issue), RoboCopy can resume from the point of interruption, minimizing data retransmission and ensuring efficient completion of the copy.

Exact Extract from Microsoft Documentation (RoboCopy):

From the Microsoft RoboCopy Documentation (available on Microsoft Docs):

"/z: Copies files in restartable mode. In restartable mode, if a file copy is interrupted, RoboCopy can resume the copy operation

from where it left off, which is particularly useful for large files or unreliable networks." Additional Notes:

\* Since RoboCopy is a Microsoft tool interacting with Nutanix Files SMB shares, the behavior of RoboCopy options is standard and not specific to Nutanix. However, Nutanix documentation recommends using tools like RoboCopy with appropriate options (e.g., /z) for reliable data migration to Files shares.

\* Nutanix Files supports SMB features like Durable File Handles (as noted in Question 19), which complement tools like RoboCopy by maintaining session state during brief network interruptions, but the /z option directly addresses resuming the copy operation itself.

:

Microsoft RoboCopy Documentation, Section: "RoboCopy Command-Line Options" (Microsoft Docs).

Nutanix Files Administration Guide, Version 4.0, Section: "Data Migration to Nutanix Files" (Nutanix Portal).

### NEW QUESTION # 77

The Administrator needs to review the following graphs, as displayed in the exhibit.

- \* Storage Used
- \* Open Connections
- \* Number of Files
- \* Top Shares by Current Capacity
- \* Top Shares by current Connections

Where should the administrator complete this action?

- A. Files Console Data Management View
- **B. Files Console Dashboard View**
- C. Files Console Monitoring View
- D. Files Console Share View

**Answer: B**

Explanation:

The Files Console Dashboard View provides an overview of the Files cluster performance and usage, including the following graphs:

Storage Used: Shows the total storage used by the Files cluster, including data, metadata, and snapshots.

Open Connections: Shows the number of active SMB and NFS connections to the Files cluster.

Number of Files: Shows the number of files stored in the Files cluster, excluding snapshots.

Top Shares by Current Capacity: Shows the top five shares by current capacity usage in the Files cluster.

Top Shares by Current Connections: Shows the top five shares by current connection count in the Files cluster<sup>2</sup>. Reference: Nutanix Files Administration Guide<sup>2</sup>

### NEW QUESTION # 78

ionization deployed Files in multiple sites, including different geographical locations across the globe. The organization has the following requirements to improve their data management lifecycle:

- \* Provide a centralized management solution.
- \* Automate archiving tier policies for compliance purposes.
- \* Protect the data against ransomware.

Which solution will satisfy the organization's requirements?

- A. Prims Central
- **B. Data Lens**
- C. Files Analytics

**Answer: B**

Explanation:

Data Lens can provide a centralized management solution for Files deployments in multiple sites, including different geographical locations. Data Lens can also automate archiving tier policies for compliance purposes, by allowing administrators to create policies based on file attributes, such as age, size, type, or owner, and move files to a lower-cost tier or delete them after a specified period. Data Lens can also protect the data against ransomware, by allowing administrators to block malicious file signatures from being written to the file system. Reference: Nutanix Data Lens Administration Guide

## NEW QUESTION # 79

Which prerequisite is required to deploy Objects on AHV or ESXi?

- A. Prism Central version is 5.17.1 or later
- **B. Port 9440 is accessible on both PE and PC**
- C. Valid SSL Certificate
- D. Nutanix STARTER License

**Answer: B**

Explanation:

Nutanix Objects, part of Nutanix Unified Storage (NUS), is an S3-compatible object storage solution that can be deployed on AHV or ESXi hypervisors. Deploying Objects has specific prerequisites to ensure successful installation and operation.

Analysis of Options:

\* Option A (Prism Central version is 5.17.1 or later): Incorrect. While Nutanix Objects requires Prism Central for deployment and management, the minimum version for Objects deployment is typically lower (e.g., Prism Central 5.15 or later, depending on the Objects version). Version 5.17.1 is not a specific requirement for Objects deployment on AHV or ESXi.

\* Option B (Port 9440 is accessible on both PE and PC): Correct. Port 9440 is used for communication between Prism Element (PE) and Prism Central (PC), as well as for internal Nutanix services. When deploying Objects, Prism Central communicates with the cluster (via Prism Element) to deploy Object Store Service VMs. This communication requires port 9440 to be open between PE and PC, making it a key prerequisite.

\* Option C (Valid SSL Certificate): Incorrect. While a valid SSL certificate is recommended for secure communication (e.g., for S3 API access), it is not a strict prerequisite for deploying Objects. Objects can be deployed with self-signed certificates, though Nutanix recommends replacing them with valid certificates for production use.

\* Option D (Nutanix STARTER License): Incorrect. The Nutanix STARTER license is an entry-level license for basic cluster functionality (e.g., VMs, storage). However, Nutanix Objects requires a separate license (e.g., Objects license or a higher-tier AOS license like Pro or Ultimate). The STARTER license alone does not support Objects deployment.

Why Option B?

Port 9440 is critical for communication between Prism Element and Prism Central during the deployment of Objects. If this port is blocked, the deployment will fail, as Prism Central cannot communicate with the cluster to deploy the Object Store Service VMs.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Deployment Guide (available on the Nutanix Portal):

"Before deploying Nutanix Objects on AHV or ESXi, ensure that port 9440 is accessible between Prism Element (PE) and Prism Central (PC). This port is required for communication during the deployment process, as Prism Central manages the deployment of Object Store Service VMs on the cluster."

:

Nutanix Objects Deployment Guide, Version 4.0, Section: "Prerequisites for Deploying Objects" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Objects Deployment Requirements".

## NEW QUESTION # 80

.....

If you want to be the talent the society actually needs you must apply your knowledge into the practical working and passing the test NCP-US-6.5 certification can make you become the talent the society needs. If you buy our NCP-US-6.5 study materials you will pass the exam successfully and realize your goal to be the talent. We have been in this career for over ten years and we have been the leader in the market. Our NCP-US-6.5 Exam Question are always the latest and valid for you to pass the exam.
