

Earn the Credential of NICET ITFAS-Level-1 Exam

NICET - Fire Alarm Systems: Level I
Issued by National Institute For Certification in Engineering Technologies (NICET)

Under direct supervision, earners perform limited job tasks. They are learning, (much like an apprentice) about fire alarm system components, installation methods, basic tools, worksite safety, and testing and inspecting. Level I technicians have at least 6 months of experience in fire alarm systems.

Skills

Fire Alarm Systems Job Site Safety

Earning Criteria

- Demonstrate knowledge by passing a proctored exam (183 questions) covering: Installation (44-54% of the exam), Maintenance (37-47% of the exam) and Submittal Preparation and System Layout (4-14% of the exam).
- A minimum of 6 months of technical experience with fire detection and signaling systems.
- Successfully demonstrate the ability to competently and repeatedly perform the Level Performance Measure activities.

ITFAS-Level-1 Exam Discount | Test ITFAS-Level-1 Voucher

Owing to the industrious dedication of our experts and other working staff, our ITFAS-Level-1 study materials grow to be more mature and are able to fight against any difficulties. Our ITFAS-Level-1 preparation exam have achieved high pass rate in the industry, and we always maintain a 99% pass rate with our endless efforts. We have to admit that behind such a startling figure, there embrace mass investments on our ITFAS-Level-1 Exam Questions from our company.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

What is the testing frequency of an engine driven generator?

- A. Monthly
- B. Semiannually
- C. Annually
- D. Weekly

Answer: D

Explanation:

Testing of engine-driven generators is governed by NFPA 110, not NFPA 72. NFPA 72 references this standard for standby power systems.

NFPA 110 (2022), Section 8.4.1:

"Diesel generator sets shall be exercised at least once weekly."

This includes running the generator under load and verifying automatic start capability.

NFPA 72 (2022), Section 10.6.3.2:

Refers to NFPA 110 for testing of standby/emergency power systems.

Correct answer: A. Weekly

NEW QUESTION # 29

What is the maximum travel distance between two fire alarm boxes measured horizontally on the same floor?

- A. 30 feet (9.1 meters)
- **B. 200 feet (61 meters)**
- C. 60 feet (18.3 meters)
- D. 90 feet (27 meters)

Answer: B

Explanation:

NFPA 72 sets a maximum horizontal travel distance between manual pull stations (manual fire alarm boxes) to ensure accessibility in large spaces.

NFPA 72 (2022), Section 17.14.6.4:

"The maximum travel distance to a manual fire alarm box shall not exceed 200 ft (61 m)." This is for accessibility so occupants can reach a pull station quickly in an emergency.

Correct answer: D. 200 feet (61 meters)

NEW QUESTION # 30

Which three of the following are how a McCulloh transmitter should be inspected? (Choose three.)

- **A. Physical condition**
- B. Distinct waterflow condition
- **C. System normal condition**
- **D. Verify location**

Answer: A,C,D

Explanation:

McCulloh transmitters are part of older fire alarm systems but are still maintained in some jurisdictions.

Inspection focuses on general condition, correct system status, and location verification.

NFPA 72 (2022), Table 14.3.1 - Inspection Frequencies:

Under McCulloh Transmitter:

* "Inspect physical condition"

* "Verify location"

* "Confirm system normal condition"

"Distinct waterflow condition" refers to alarm testing and is not part of the inspection phase.

Correct answers:

* Physical condition

* System normal condition

* Verify location

NEW QUESTION # 31

Prior to any testing, all persons and facilities receiving signals and all occupants need to be notified of the testing to prevent which of the following issues?

- A. Critical system shutdown

- B. Elevator usage
- C. Facility evacuation
- **D. Unnecessary response**

Answer: D

Explanation:

Before performing any inspection or testing activities, it's critical to notify all affected parties, including occupants, central stations, and local authorities (as applicable), to prevent accidental dispatch of emergency services. The reason for this is clearly stated in NFPA 72 (2022 Edition), Section 14.2.3.1, which requires notification of all stakeholders before any test.

NFPA 72:2022 - 14.2.3.1

"Prior to any testing, all persons and facilities receiving alarm, supervisory, or trouble signals, and all building occupants shall be notified to prevent unnecessary response." This is critical for avoiding disruptions like fire department rollouts or building evacuations that could be triggered by system activations during a test. That makes the correct answer:

D: Unnecessary response

NEW QUESTION # 32

Lights used for fire alarm signaling shall be which of the following colors?

- A. Clear or amber
- B. Clear or nominal white
- **C. Clear or red**
- D. Clear or blue

Answer: C

Explanation:

Visible notification appliances used in fire alarm systems (like strobes) must be either clear or red to distinguish them from other building systems.

NFPA 72 (2022), Section 18.5.1.4:

"Visible signals used in fire alarm systems shall be clear or nominal red in color." This ensures standardized visual recognition during fire emergencies.

Correct answer: D. Clear or red

NEW QUESTION # 33

.....

One such trustworthy point about exam preparation material is that it first gains your trust, and then asks you to purchase it. Everyone can get help from Exam4Labs's free demo of NICET ITFAS-Level-1 exam questions. Our Inspection and Testing of Fire Alarm Systems Level I Exam exam questions never remain outdated! Take a look at our Free NICET ITFAS-Level-1 Exam Questions And Answers to check how perfect they are for your exam preparation. Once you buy it, you will be able to get free updates for Inspection and Testing of Fire Alarm Systems Level I Exam exam questions for up to 1 year.
