NEW QUESTION # 140

You have a Microsoft 365 E5 subscription.

You need to enable support for sensitivity labels in Microsoft SharePoint Online.

What should you use?

- A. the SharePoint admin center
- B. the Microsoft Purview portal
- C. the Microsoft 365 admin center
- D. the Microsoft Entra admin center

Answer: A

Explanation:

To enable support for sensitivity labels in Microsoft SharePoint Online, you must configure the setting in the SharePoint admin center.

Sensitivity labels in SharePoint Online allow labeling and protection of files stored in SharePoint and OneDrive. This feature must be enabled in the SharePoint admin center → Settings → Information protection to allow sensitivity labels to apply encryption and

protection to stored documents.

EDM does not store raw data; instead, it requires hashed versions of sensitive data for privacy and security. To upload the hashed data, Microsoft provides the EDM upload agent. This ensures that the data is securely processed and recognized by the EDM service in Microsoft 365.

NEW QUESTION # 142

You have a Microsoft 365 E5 subscription that uses Microsoft Purview.

You are creating an exact data match (EDM) classifier named EDM1.

For EDM1, you upload a schema file that contains the fields shown in the following table.

Column name	Match mode
PP	EU Passport Number
Name	All Full Names
DateOfBirth	Single-token
AccountNumber	Multi-token

What is the maximum number of primary elements that EDM1 can have?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

In Microsoft Purview Exact Data Match (EDM) classifiers, a primary element is a unique, identifying field used for data matching. EDM allows up to two primary elements per schema.

From the provided table, the Match mode indicates how data is analyzed:

PP (EU Passport Number) # Likely a primary element because it's unique.

Name (All Full Names) # Typically not a primary element as names are common.

DateOfBirth (Single-token) # Usually a secondary element, not unique.

AccountNumber (Multi-token) # Can be a primary element, as it's a unique identifier.

Since EDM supports a maximum of two primary elements, the correct answer is 2.
