## AZ-104 – 100% Free Latest Test Report | Reliable Microsoft Azure Administrator Exam Bootcamp

To improve the Microsoft Azure Administrator (AZ-104) exam questions, Test4Sure always upgrades and updates its AZ-104 dumps PDF format and it also makes changes according to the syllabus of the Microsoft Azure Administrator (AZ-104) exam. In the Web-Based Microsoft AZ-104 Practice Exam, the Microsoft Azure Administrator (AZ-104) exam dumps given are actual and according to the syllabus of the test. This Microsoft Azure Administrator (AZ-104) practice exam is compatible with all operating

systems. Likewise, this Microsoft Azure Administrator (AZ-104) practice test is browser-based so it needs no special installation to function properly. Firefox, Chrome, IE, Opera, Safari, and all the major browsers support this Microsoft Azure Administrator (AZ-104) practice exam.

## Microsoft Azure Administrator Sample Questions (Q375-Q380):

### NEW QUESTION # 375

You have an Azure subscription that contains the resource groups shown in the following table.

Name	Lock name	Lock type
RG1	None	None
RG2	Lock Microsoft	Delete

RG1 contains the resources shown in the following table.

Name	Type	Lock name	Lock type
storage1	Storage account	Lock1	Delete
VNET1	Virtual network	Lock2	Read-only
IP1	Public IP address	None	Microsoft

RG2 contains the resources shown in the following table.

Name	Type	Lock name	Lock type
storage2	Storage account	Lock1	Delete
VNET2	Virtual network	Lock2	Read-only
IP2	Public IP address	None	None

You need to identify which resources you can move from RG1 to RG2, and which resources you can move from RG2 to RG1. Which resources should you identify? To answer, select the appropriate options in the answer area.

Resources that you can move from RG1 to RG2:

- None
- IP1 only
- IP1 and storage1 only
- IP1 and VNET1 only
- IP1, VNET1, and storage1

Resources that you can move from RG2 to RG1:

- None
- IP2 only
- IP2 and storage2 only
- IP2 and VNET2 only
- IP2, VNET2, and storage2

**Answer:**

Explanation:

Resources that you can move from RG1 to RG2:

None
IP1 only
IP1 and storage1 only
IP1 and VNET1 only
IP1, VNET1, and storage1

Resources that you can move from RG2 to RG1:

None
IP2 only
IP2 and storage2 only
IP2 and VNET2 only
IP2, VNET2, and storage2

#### NEW QUESTION # 376

You have an Azure subscription.

You plan to use an Azure Resource Manager template to deploy a virtual network named VNET1 that will use Azure Bastion. How should you complete the template? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

```
{  
  "type": "Microsoft.Network/virtualNetworks",  
  "name": "VNET1",  
  "apiVersion": "2019-02-01",  
  "location": "[resourceGroup().location]",  
  "properties": {  
    "addressSpace": {  
      "addressPrefixes": ["10.10.10.0/24"]  
    },  
    "subnets": [  
      {  
        "name": "AzureBastionSubnet",  
        "properties": {  
          "addressPrefix": "10.10.10.0/27"  
        }  
      },  
      {  
        "name": "AzureFirewallSubnet",  
        "properties": {  
          "addressPrefix": "10.10.10.0/29"  
        }  
      },  
      {  
        "name": "LAN01",  
        "properties": {  
          "addressPrefix": "10.10.10.0/30"  
        }  
      },  
      {  
        "name": "RemoteAccessSubnet",  
        "properties": {  
          "addressPrefix": "10.10.10.0/30"  
        }  
      }  
    ]  
  }  
}
```

**Answer:**

## NEW QUESTION # 377

You have an Azure subscription that contains the resources shown in the following table.

Name	Type
LB1	Load Balancer
VM1	Virtual machine
VM2	Virtual machine

LB1 is configured as shown in the following table.

Name	Type	Value
bepool1	Backend pool	VM1, VM2
LoadBalancerFrontEnd	Frontend IP configuration	Public IP address
hprobe1	Health probe	Protocol: TCP Port: 80 Interval: 5 seconds Unhealthy threshold: 2
rule1	Load balancing rule	IP version: IPv4 Frontend IP address: LoadBalancerFrontEnd Port: 80 Backend Port: 80 Backend pool: bepool1 Health probe: hprobe1

You plan to create new inbound NAT rules that meet the following requirements:

Provide Remote Desktop access to VM2 from the internet by using port 3389.

- A. A health probe
- B. A backend pool
- C. A load balancing rule
- D. A frontend IP address

**Answer: D**

Explanation:

Explanation

To create an inbound NAT rule, you need to specify a frontend IP address and a frontend port for the load balancer to receive the traffic, and a backend IP address and a backend port for the load balancer to forward the traffic to. According to the first table, LB1 has only one frontend IP address, which is

40.121.183.105. However, this frontend IP address is already used by the existing inbound NAT rule named rule1, which forwards port 80 to VM1 on port 802. Therefore, you cannot use the same frontend IP address and port for another inbound NAT rule.

To solve this problem, you need to create a new frontend IP address for LB1 before you can create the new inbound NAT rules. You can do this by using the Azure portal, PowerShell, or CLI3. After you create a new frontend IP address, you can use it to create the new inbound NAT rules that meet your requirements.

**NEW QUESTION # 378**

You have an Azure subscription that contains 10 network security groups (NSGs), 10 virtual machines, and a Log Analytics workspace named Workspace1. Each NSG is connected to a virtual machine.

You need to configure an Azure Monitor Network Insights alert that will be triggered when suspicious network traffic is detected. What should you do first?

- A. Configure a private link.
- B. Configure data collection endpoints.
- C. Deploy Connection Monitor.
- D. **Configure NSG flow logs.**

**Answer: D**

Explanation:

The Traffic tab provides access to all NSGs configured for NSG flow logs and Traffic Analytics for the selected set of subscriptions, grouped by location.

<https://learn.microsoft.com/en-us/azure/network-watcher/network-insights-overview#traffic>

**NEW QUESTION # 379**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You manage a virtual network named VNet1 that is hosted in the West US Azure region.

VNet1 hosts two virtual machines named VM1 and VM2 that run Windows Server.

You need to inspect all the network traffic from VM1 to VM2 for a period of three hours.

Solution: From Azure Network Watcher, you create a connection monitor.

Does this meet the goal?

- A. Yes
- B. **No**

**Answer: B**

Explanation:

Explanation
