## **Snowflake SnowPro Core Certification Exam Sample Questions (Q128-Q133):**

### **NEW QUESTION # 128**

What is a characteristic of a tag associated with a masking policy?

- A. A tag can have multiple masking policies for each data type.
- **B. A tag can have only one masking policy for each data type.**
- C. A tag can be dropped after a masking policy is assigned
- D. A tag can have multiple masking policies with varying data types

**Answer: B**

Explanation:

In Snowflake, a tag can be associated with only one masking policy for each data type. This means that for a given data type, you can define a single masking policy to be applied when a tag is used. Tags and masking policies are part of Snowflake's data classification and governance features, allowing for data masking based on the context defined by the tags.

### **NEW QUESTION # 129**

What do the terms scale up and scale out refer to in Snowflake? (Choose two.)

- A. Scaling up adds additional database servers to an existing running cluster to handle larger workloads.
- B. Snowflake recommends using both scaling up and scaling out to handle more concurrent queries.
- C. Scaling out adds clusters of varying sizes to a virtual warehouse.
- **D. Scaling up resizes a virtual warehouse so it can handle more complex workloads.**
- E. Scaling out adds additional database servers to an existing running cluster to handle more concurrent queries.
- **F. Scaling out adds clusters of the same size to a virtual warehouse to handle more concurrent queries.**

**Answer: D,F**

### **NEW QUESTION # 130**

What features does Snowflake Time Travel enable?

- **A. Restoring data-related objects that have been deleted within the past 90 days**
- **B. Conducting point-in-time analysis for BI reporting**
- C. Analyzing data usage/manipulation over all periods of time
- D. Querying data-related objects that were created within the past 365 days

**Answer: A,B**

Explanation:

Snowflake Time Travel is a powerful feature that allows users to access historical data within a defined period. It enables two key capabilities:

\* B. Restoring data-related objects that have been deleted within the past 90 days: Time Travel can be used to restore tables, schemas, and databases that have been accidentally or intentionally deleted within the Time Travel retention period.

\* C. Conducting point-in-time analysis for BI reporting: It allows users to query historical data as it appeared at a specific point in time within the Time Travel retention period, which is crucial for business intelligence and reporting purposes.

While Time Travel does allow querying of past data, it is limited to the retention period set for the Snowflake account, which is

typically 1 day for standard accounts and can be extended up to 90 days for enterprise accounts. It does not enable querying or restoring objects created or deleted beyond the retention period, nor does it provide analysis over all periods of time.
