Splunk Enterprise Certified Admin Sample Questions (Q107-Q112):

NEW QUESTION # 107

Which forwarder type can parse data prior to forwarding?

- A. Heaviest forwarder
- B. **Heavy forwarder**
- C. Hyper forwarder

- D. Universal forwarder

Answer: B

Explanation:

Explanation

<https://docs.splunk.com/Documentation/Splunk/latest/Forwarding/Typesofforwarders>

"A heavy forwarder parses data before forwarding it and can route data based on criteria such as source or type of event."

NEW QUESTION # 108

Where are deployment server apps mapped to clients?

- A. Client Applications tab in forwarder management interface or clientapps.conf
- **B. Server Classes tab in forwarder management interface or serverclass.conf**
- C. Apps tab in forwarder management interface or clientapps.conf
- D. Clients tab in forwarder management interface or deploymentclient.conf

Answer: B

Explanation:

Explanation/Reference: https://docs.splunk.com/Documentation/Splunk/8.0.5/Updating/Updateconfigurations#2._Reload_the_deployment_server

NEW QUESTION # 109

Running this search in a distributed environment:

On what Splunk component does the eval command get executed?

- A. Universal Forwarders
- B. Search heads
- **C. Search peers**
- D. Heavy Forwarders

Answer: C

Explanation:

The eval command is a distributable streaming command, which means that it can run on the search peers in a distributed environment¹. The search peers are the indexers that store the data and perform the initial steps of the search processing². The eval command calculates an expression and puts the resulting value into a search results field¹. In your search, you are using the eval command to create a new field called "responsible_team" based on the values in the "account" field.

NEW QUESTION # 110

An admin updates the Role to Group mapping for external authentication. How does the change affect users that are currently logged into Splunk?

- **A. Users will continue to operate under their previous role until the next time they log into Splunk.**
- B. Search is disabled until users reauthenticate.
- C. Only newly created user accounts are affected by the role change.
- D. The role update terminates the user's current session, and they have to log back in.

Answer: A

Explanation:

Splunk checks role-to-group mapping only during user login for external authentication (e.g., LDAP, SAML).

Users already logged in will continue using their previously assigned roles until they log out and log back in.

The changes to role mapping do not disrupt ongoing sessions.

Incorrect Options:

B:Search is not disabled upon role updates.

C: This is incorrect since existing users are also updated upon the next login.

D:Role updates do not terminate ongoing sessions.

NEW QUESTION # 111

Which feature in Splunk allows Event Breaking, Timestamp extractions, and any advanced configurations found in props.conf to be validated all through the UI?

- A. Search
- B. Forwarder inputs
- C. Data preview
- D. Apps

Answer: C
