The SAP Certified Associate - SAP IBP for Supply Chain (C_IBP_2502) certification exam is a valuable credential that is designed to validate the candidates' skills and knowledge level. The C_IBP_2502 certification exam is one of the high in demand industrial recognized credentials to prove your skills and knowledge level. With the SAP C_IBP_2502 Certification Exam everyone can upgrade their skills and become competitive and updated in the market.

SAP C_IBP_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Analytics and Reporting: his section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.
Topic 2	<ul style="list-style-type: none">General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.
Topic 3	<ul style="list-style-type: none">Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.

Topic 4	<ul style="list-style-type: none"> • Planning Operators & Application: JobsThis section is designed for demand planners and focuses on the configuration and execution of planning operators and application jobs. It includes an understanding of how these tools automate planning processes and improve system performance. Candidates will be tested on their ability to configure and execute jobs that support various planning functions.
Topic 5	<ul style="list-style-type: none"> • Solution Architecture & Data Integration: his exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Topic 6	<ul style="list-style-type: none"> • Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.
Topic 7	<ul style="list-style-type: none"> • Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.
Topic 8	<ul style="list-style-type: none"> • User Interface: This section assesses the knowledge of business users in navigating and utilizing the SAP interface effectively. It covers how to interact with different features, customize views, and leverage UI functionalities for efficient planning and reporting. Candidates are expected to demonstrate proficiency in accessing and interpreting data within the system.

SAP Unparalleled Test C_IBP_2502 Vce Free Pass Guaranteed Quiz

Our C_IBP_2502 exam questions generally raised the standard of practice materials in the market with the spreading of higher standard of knowledge in this area. So your personal effort is brilliant but insufficient to pass the SAP Certified Associate - SAP IBP for Supply Chain exam and our C_IBP_2502 test guide can facilitate the process smoothly & successfully. Our SAP Certified Associate - SAP IBP for Supply Chain practice materials are successful by ensuring that what we delivered is valuable and in line with the syllabus of this exam. And our C_IBP_2502 Test Guide benefit exam candidates by improving their ability of coping the exam in two ways, first one is their basic knowledge of it.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q23-Q28):

NEW QUESTION # 23

You are reviewing the master data types that are often used for supply and inventory planning. Which master data types are compound master data types? Note: There are 2 correct answers to this question.

- A. SOURCECUSTGROUP
- B. SOURCECUSTOMER
- C. SOURCELOCATION
- D. SOURCEPRODUCTION

Answer: B,C

Explanation:

In SAP IBP, master data types are classified as simple (standalone) or compound (combining multiple simple types). Compound master data types link related entities (e.g., source and target) and are critical for supply and inventory planning to define relationships.

* Option A: SOURCEPRODUCTION This is incorrect. SOURCEPRODUCTION is not a standard compound master data type in SAP IBP. Production relationships are modeled via Production Source of Supply (e.g., Production Source Header/Item), not a compound type named SOURCEPRODUCTION.

* Option B: SOURCECUSTOMER This is correct. SOURCECUSTOMER is a compound master data type combining Source ID (e.g., Location or Product) and Customer ID. It defines sourcing relationships (e.g., which customers are served from which sources) and is used in supply and inventory planning to allocate demand.

* Option C: SOURCELOCATION This is correct. SOURCELOCATION is a compound master data type linking Source Location and Target Location (e.g., via Transportation Lane). It's essential for modeling supply chain networks in inventory and supply planning.

* Option D: SOURCECUSTGROUP This is incorrect. There's no standard compound master data type called SOURCECUSTGROUP in SAP IBP. Customer groups might be attributes, but they don't form a compound type. Thus, B and C (SOURCECUSTOMER, SOURCELOCATION) are compound master data types in SAP IBP, as per official master data configuration documentation.

NEW QUESTION # 24

Which apps can be enhanced with analytical charts? Note: There are 2 correct answers to this question.

- A. Intelligent Visibility
- B. Web-based Planning
- C. Dashboards - Advanced
- D. Planner Workspace

Answer: C,D

Explanation:

Analytical charts in SAP IBP enhance visualization and decision-making. The apps supporting this depend on SAP IBP's UI framework (Fiori-based).

* Option A: Web-based Planning This is incorrect. "Web-based Planning" is not a specific SAP IBP app; it's a general term. Planning is primarily via Excel or Planner Workspaces, not a standalone web app for charts.

* Option B: Intelligent Visibility This is incorrect. Intelligent Visibility is a feature in SAP Supply Chain Control Tower, not an app enhanced with analytical charts in the core IBP planning context.

* Option C: Planner Workspace This is correct. Planner Workspaces (Fiori app) can embed analytical charts (e.g., from Analytics Stories) alongside planning data, enhancing the UI, per SAP IBP's documentation.

* Option D: Dashboards - Advanced This is correct. The Advanced Dashboards app allows users to create and customize analytical charts for insights, a core visualization tool in SAP IBP, per official app descriptions.

Thus, C and D are apps enhanced with analytical charts, per SAP IBP's UI capabilities.

NEW QUESTION # 25

Which SAP IBP planning operator can be run to delete planning objects in a certain version?

- A. Purge Key Figure Data
- B. Purge Non-Conforming Data
- C. Purge Key Figure Data Outside Planning Area Planning Horizon
- D. Purge Master Data

Answer: A

Explanation:

Planning operators in SAP IBP (via the Application Jobs app) manage data, including deletions. The question likely intends "delete key figure data for planning objects" in a version, not the objects themselves, per SAP IBP's terminology.

* Option A: Purge Master Data This is incorrect. This deletes master data (e.g., Products), not key figure data tied to planning objects in a version.

* Option B: Purge Key Figure Data Outside Planning Area Planning Horizon This is incorrect. This deletes data outside the horizon across versions, not specific to a version's planning objects.

* Option C: Purge Key Figure Data This is correct. The Purge Key Figure Data operator deletes key figure values for specified planning objects (e.g., by filter) in a selected version, per SAP IBP's data management documentation.

* Option D: Purge Non-Conforming Data This is incorrect. This removes inconsistent data (e.g., orphaned records), not targeted deletion in a version.

Thus, C is the correct operator, per SAP IBP's official job capabilities.

NEW QUESTION # 26

Model configuration allows the attributes of a master data type to be assigned as key figures. Which feature is relevant for this type of object?

- A. This object contains user-defined criteria that monitor the running of business plans
- B. This type of key figure has better performance than a time-independent key figure
- **C. This object usually provides a single value for a unique planning combination**
- D. This type of key figure is not usually stored and it cannot be editable

Answer: C

Explanation:

In SAP IBP, the "Attribute as Key Figure" feature allows master data attributes (e.g., Product Category) to be used as key figures, configured in the Planning Areas app, per SAP IBP's documentation.

* Option A: This type of key figure is not usually stored and it cannot be editable This is incorrect.

Attribute key figures are stored (sourced from master data) and can be editable if configured as such, not inherently non-editable.

* Option B: This type of key figure has better performance than a time-independent key figure This is incorrect. Performance depends on usage, not a guaranteed advantage over other time-independent key figures.

* Option C: This object usually provides a single value for a unique planning combination This is correct. An attribute key figure (e.g., Product Price) provides one static value per planning combination (e.g., PERPROD), a defining feature, per SAP IBP's configuration guides.

* Option D: This object contains user-defined criteria that monitor the running of business plans This is incorrect. This describes alerts or KPIs, not attribute key figures.

Thus, C is the relevant feature, per SAP IBP's official definition.

NEW QUESTION # 27

What are some of the prerequisites for configuring a planning area that results in a successful consistency check? Note: There are 2 correct answers to this question.

- A. Configure at least one calculated key figure for the planning area
- **B. Specify a planning horizon in the planning area for each level of the assigned time profile**
- C. Configure at most two input key figures on the same planning level in a key figure calculation
- **D. Assign the compound master data type and its component master data types**

Answer: B,D

Explanation:

A successful consistency check in SAP IBP ensures the planning area's configuration is valid, per SAP IBP's documentation.

* Option A: Configure at least one calculated key figure for the planning area This is incorrect.

Calculated key figures are optional; a planning area can function with only stored key figures.

* Option B: Specify a planning horizon in the planning area for each level of the assigned time profile This is correct. The planning horizon (e.g., past/future periods) must align with the time profile levels (e.g., week, month) for data consistency, a prerequisite, per SAP IBP's setup.

* Option C: Configure at most two input key figures on the same planning level in a key figure calculation This is incorrect. There's no such limit; calculations can use multiple inputs, depending on complexity.

* Option D: Assign the compound master data type and its component master data types This is correct. Compound types (e.g., SOURCECUSTOMER) and their components (e.g., Customer, Location) must be assigned for network consistency, per SAP IBP's documentation.

Thus, B and D are prerequisites, per SAP IBP's official consistency check requirements.

NEW QUESTION # 28

.....

Lead1Pass is famous for high-quality certification exam C_IBP_2502 guide materials in this field recent years. All buyers enjoy the privilege of 100% pass guaranteed by our excellent C_IBP_2502 exam questions; our C_IBP_2502 actual questions and answers find the best meaning in those who have struggled hard to pass C_IBP_2502 Certification exams with more than one attempt. We have special information channel which can make sure that our exam C_IBP_2502 study materials are valid and the latest based on the newest information.
