## C\_ABAPD\_2507考題寶典 - C\_ABAPD\_2507 PDF

VCESoft是領先于世界的學習資料提供商之一，您可以下載我們最新的PDF版本免費試用作為體驗。我們還提供可靠和有效的軟件版本C\_ABAPD\_2507題庫資料，幫助您模擬真實的考試環境，以方便考生掌握最新的SAP C\_ABAPD\_2507考試資訊。在我們的指導和幫助下，可以首次通過您的考試，C\_ABAPD\_2507考古題是IT專家經過實踐測試得到的，C\_ABAPD\_2507考古題也能幫您在IT行業的未來達到更高的水平。

### SAP C\_ABAPD\_2507 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none"><li>Core ABAP Programming: This section of the exam measures skills of SAP Application Programmers and covers foundational ABAP programming knowledge. Topics include modularization techniques, internal tables, control structures, and classical report programming. Mastery of these concepts is essential for building efficient ABAP applications.</li></ul>
主題 2	<ul style="list-style-type: none"><li>SAP Clean Core Extensibility and ABAP Cloud: This section of the exam measures skills of SAP Application Programmers and covers the clean core principles and extensibility options within SAP BTP. It also includes cloud-native ABAP development practices, emphasizing the creation of upgrade-stable and maintainable extensions aligned with SAP's cloud strategy.</li></ul>
主題 3	<ul style="list-style-type: none"><li>Object-Oriented Design: This section of the exam measures skills of SAP ABAP Developers and covers the basics of object-oriented programming in ABAP. It includes concepts such as classes, interfaces, inheritance, polymorphism, and encapsulation, all of which are necessary for building robust and scalable ABAP applications.</li></ul>

主題 4	<ul style="list-style-type: none"> <li>ABAP Core Data Services and Data Modeling: This section of the exam measures skills of SAP ABAP Developers and covers the creation, definition, and use of Core Data Services (CDS) views for data modeling within SAP environments. Candidates are expected to understand annotations, data definitions, and the role of CDS in enabling advanced data processing and integration across SAP systems.</li> </ul>
主題 5	<ul style="list-style-type: none"> <li>ABAP SQL and Code Pushdown: This section of the exam measures skills of SAP ABAP Developers and covers the use of advanced SQL techniques within ABAP. It includes code pushdown strategies that leverage database-level processing to enhance application performance. Key areas include Open SQL enhancements and integrating logic closer to the database.</li> </ul>

## 最新的 SAP Certified Associate C\_ABAPD\_2507 免費考試真題 (Q74-Q79):

### 問題 #74

Given the following code which defines an SAP HANA database table in SAP S/4HANA Cloud, public edition:

```
@EndUserText.label : 'Draft table for entity /DMO/R_AGENCY'
```

```
@AbapCatalog.tableCategory : #TRANSPARENT
```

```
@AbapCatalog.deliveryClass : #A
```

```
@AbapCatalog.dataMaintenance : #RESTRICTED
```

```
define table /dmo/agency_d {
  key mandt : mandt not null;
  key agencyid : /dmo/agency_id not null;
  key draftuuid : sdraft_uuid not null;
  name : /dmo/agency_name;
  street : /dmo/street;
  postalcode : /dmo/postal_code;
  city : /dmo/city;
}
```

You are a consultant and the client wants you to extend this SAP database table with a new field called `zz_countrycode` on line #14. Which of the following is the correct response?

- A. The database table cannot be extended since it has not been extensibility enabled by SAP.
- B. The database table can be extended whether extensibility enabled or not if it is assigned to a software component of type "ABAP Cloud".
- C. The database table can be extended once it has extensibility been enabled by the customer.
- D. The database table can be extended whether extensibility enabled or not if it is assigned to a software component of type "Standard ABAP".

答案: A

### 解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

In SAP S/4HANA Cloud, public edition, database tables are only extendable if SAP has explicitly enabled extensibility for them via metadata. This is a strict limitation in the ABAP Cloud model to ensure upgrade- stability and isolation of extensions from SAP-owned objects.

Key facts:

\* The annotation `@AbapCatalog.dataMaintenance : #RESTRICTED` implies that this table is not editable or extensible by default.

\* The table resides in a delivered component and unless SAP marks it as extensible, customers cannot add fields like `zz_countrycode`.

\* Even if the table is in an ABAP Cloud-compliant software component, extensibility must be explicitly enabled by SAP.

\* Therefore, Option B is the only correct and valid answer.

Incorrect options:

\* Option A and D are wrong because extensibility is not determined by the software component type alone.

\* Option C is wrong because customers cannot enable extensibility for SAP-delivered tables; it must be pre-approved by SAP.

Reference: ABAP Extension Guidelines for SAP S/4HANA Cloud (ABAP Extension.pdf, section 2.3 - Extensibility Enablement and Restrictions in Tier 1)

### 問題 #75

Which statement can you use to change the contents of a row of data in an internal table?

- A. UPDATE
- B. INSERT
- C. APPEND
- **D. MODIFY**

答案： D

#### 問題 #76

Given the following code excerpt that defines an SAP HANA database table:

```
1 DEFINE TABLE demo_table
2 {
3 KEY field1 : REFERENCE TO abap.clnt(3);
4 KEY field2 : abap.char(1332);
5 @Semantics.quantity.unitOfMeasure : 'demo_table.field4'
6 field3 : abap.quan(2);
7 field4 : abap.unit(2);
8 }
...
```

Which field is defined incorrectly?

- A. field4
- **B. field1**
- C. field3
- D. field2

答案： B

#### 問題 #77

Given the following code:

```
DATA gv_text1 TYPE string "#EC_NEEDED
```

```
DATA gv_text2 TYPE string ##NEEDED.
```

What are valid statements? (Select 2 correct answers)

- **A. #EC\_NEEDED is not checked by the syntax checker.**
- B. The pseudo-comment is checked by the syntax checker.
- C. The pragma is not checked by the syntax checker.
- **D. ##NEEDED is checked by the syntax checker.**

答案： A,D

解題說明：

Comprehensive and Detailed Explanation from Exact Extract:

\* Pragmas (##) are evaluated by the syntax check and runtime check tools (e.g., ATC, Code Inspector). ##NEEDED is recognized and processed (C).

\* Pseudo-comments (#EC) are not checked; they are legacy directives to suppress specific findings, hence (D) is correct.

\* Therefore, A and B are invalid.

Study Guide Reference: ABAP Cloud Guidelines - Pseudo-comments vs Pragmas.

#### 問題 #78

You have two internal tables itab1 and itab2. What is true for using the expression itab1 = corresponding #( itab2 )? Note: There are 2 correct answers to this question.

- A. Fields with the same name but with different types may be copied from itab2 to itab1.
- **B. Fields with the same name and the same type will be copied from itab2 to itab1.**
- **C. itab1 and itab2 must have at least one field name in common.**

- D. itab1 and itab2 must have the same data type.

答案: B,C

解題說明:

The expression `itab1 = corresponding #( itab2 )` is a constructor expression with the component operator CORRESPONDING that assigns the contents of the internal table itab2 to the internal table itab1. The following statements are true for using this expression:  
 B: itab1 and itab2 must have at least one field name in common. This is because the component operator CORRESPONDING assigns the identically named columns of itab2 to the identically named columns of itab1 by default, according to the rules of MOVE-CORRESPONDING for internal tables. If itab1 and itab2 do not have any field name in common, the expression will not assign any value to itab1 and it will remain initial or unchanged.  
 C: Fields with the same name and the same type will be copied from itab2 to itab1. This is because the component operator CORRESPONDING assigns the identically named columns of itab2 to the identically named columns of itab1 by default, according to the rules of MOVE-CORRESPONDING for internal tables. If the columns have the same name but different types, the assignment will try to perform a conversion between the types, which may result in a loss of precision, a truncation, or a runtime error, depending on the types involved.  
 The following statements are false for using this expression:

A: Fields with the same name but with different types may be copied from itab2 to itab1. This is not true, as explained in statement C. The assignment will try to perform a conversion between the types, which may result in a loss of precision, a truncation, or a runtime error, depending on the types involved.  
 D: itab1 and itab2 must have the same data type. This is not true, as the component operator CORRESPONDING can assign the contents of an internal table of one type to another internal table of a different type, as long as they have at least one field name in common. The target type of the expression is determined by the left-hand side of the assignment, which is itab1 in this case. The expression will create an internal table of the same type as itab1 and assign it to itab1.

## 問題 #79
