How BraindumpQuiz will Help You in Passing the Microsoft SC-401 Certification Exam?

In order to meet the demand of all customers and protect your machines network security, our company can promise that our SC-401 test training guide have adopted technological and other necessary measures to ensure the security of personal information they

collect, and prevent information leaks, damage or loss. In addition, the SC-401 exam dumps system from our company can help all customers ward off network intrusion and attacks prevent information leakage, protect user machines network security. If you choose our SC-401 study questions as your study tool, we can promise that we will try our best to enhance the safety guarantees and keep your information from revealing, and your privacy will be protected well. You can rest assured to buy the SC-401 exam dumps from our company.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q59-Q64):

NEW QUESTION # 59
You have a Microsoft $65 subscription.
You plan to retain the following audit log record types and activities for the next three years.
* CopilotInteraction: All activities selected (1/1)
o Interacted with Copilot
* Compliance DLP endpoint: All activities selected {2/2}
o Matched DIP rule
o Removed Dl P rule from document
* AzureActiveDirectory 2 of 25 activities selected (2/25)
o Reset user password o Changed user password
What is the minimum number of audit retention policies you should create to retain only the selected record types and activities?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:
Step 1 - Understanding the requirement
You want to retain specific audit log record types and activities for 3 years:
CopilotInteraction # All activities (1/1)
Compliance DLP endpoint # All activities (2/2)
Azure Active Directory # Only 2 out of 25 activities selected (Reset user password, Changed user password) The goal is to minimize the number of audit retention policies while meeting the requirement to store only the selected record types and activities.
Step 2 - Audit retention policies in Microsoft Purview
Audit retention policies let you define which activities and record types are retained and for how long.
A single retention policy can include multiple record types and multiple activities.
Limitation: Each policy can only define one set of retention settings per included record types/activities.
If you want to retain different subsets of activities (e.g., only 2 out of 25 in Azure AD), you must create a separate policy for that.
Reference: Set up audit (Premium) retention policies in Microsoft Purview Step 3 - Applying to the scenario CopilotInteraction: Since you need all activities, you can include them in one policy.
Compliance DLP endpoint: Since you also need all activities, they can be added to the same policy as CopilotInteraction.
These two can be covered by 1 policy.
Azure Active Directory: You only need 2 out of 25 activities. Since this requires activity-level filtering, it must be placed in a separate policy.
Thus:
Policy 1 # CopilotInteraction (all) + Compliance DLP endpoint (all)
Policy 2 # Azure AD "Reset user password"
Policy 3 # Azure AD "Changed user password"
That equals 3 total policies.

NEW QUESTION # 60
You have a Microsoft 365 E5 subscription.
You plan to implement insider risk management for users that manage sensitive data associated with a project.
You need to create a protection policy for the users. The solution must meet the following requirements:
*Minimize the impact on users who are NOT part of the project.
*Minimize administrative effort.
What should you do first?

- A. From the Microsoft Purview portal, create an insider risk management policy.
- B. From the Microsoft Entra admin center, create a security group.

Answer: B

Explanation:
C From the Microsoft Entra admin center create a User risk policy
D From the Microsoft Purview portal create a priority user group
Explanation:
To implement insider risk management for users managing sensitive project data while minimizing the impact on other users and reducing administrative effort, you should first create a security group in Microsoft Entra ID (formerly Azure AD).
Security groups allow you to scope insider risk management policies to specific users instead of applying policies to all users, which helps in minimizing unnecessary alerts and reducing administrative overhead. After creating the security group, you can assign this group to a Microsoft Purview Insider Risk Management policy, ensuring that only project-related users are affected.

NEW QUESTION # 61
You have a Microsoft 365 E5 tenant that uses a domain named contoso.com.
A user named User 1 sends link based, branded emails that are encrypted by using Microsoft Purview Advanced Message Encryption to the recipients shown in the following table.
For which recipients Can User1 revoke the emails?

- A. Recipient4 only
- B. Reclpient3 and Recipients only
- C. Reciptent1 and Recipient
