

# Snowflake ARA-C01 Pdf Version & ARA-C01 Latest Exam Discount

**Snowflake SnowPro Advanced Architect (ARA-C01)**

**32 Real Exam Question and Answers**

P.S. Free & New ARA-C01 dumps are available on Google Drive shared by DumpExam: [https://drive.google.com/open?id=1PH\\_Qogcp3OVbAPHh2D5t7r6Sngrolw7k](https://drive.google.com/open?id=1PH_Qogcp3OVbAPHh2D5t7r6Sngrolw7k)

The passing rate of our ARA-C01 study materials is the issue the client mostly care about and we can promise to the client that the passing rate of our product is 99% and the hit rate is also high. Our ARA-C01 practice braindumps are selected strictly based on the Real ARA-C01 Exam and refer to the exam papers in the past years. Our expert team devotes a lot of efforts on them and guarantees that each answer and question is useful and valuable.

Snowflake ARA-C01 Certification is an excellent opportunity for architects and consultants to validate their expertise in Snowflake's data warehousing platform. It is a challenging exam that covers a wide range of advanced topics, and passing the exam demonstrates a deep understanding of Snowflake's architecture and best practices. SnowPro Advanced Architect Certification certification is also recognized globally and can help individuals stand out in a competitive job market.

## ARA-C01 Latest Exam Discount - Exam ARA-C01 Pass4sure

All the given practice questions in the desktop software are identical to the SnowPro Advanced Architect Certification (ARA-C01) actual test. Windows computers support the desktop practice test software. DumpExam has a complete support team to fix issues of Snowflake ARA-C01 PDF QUESTIONS software users. DumpExam practice tests (desktop and web-based) produce score report at the end of each attempt. So, that users get awareness of their SnowPro Advanced Architect Certification (ARA-C01) preparation status and remove their mistakes.

## Snowflake SnowPro Advanced Architect Certification Sample Questions (Q30-Q35):

### NEW QUESTION # 30

Which system functions does Snowflake provide to monitor clustering information within a table (Choose two.)

- A. **SYSTEM\$CLUSTERING\_DEPTH**
- B. SYSTEM\$CLUSTERING\_KEYS
- C. **SYSTEM\$CLUSTERING\_INFORMATION**
- D. SYSTEM\$CLUSTERING\_PERCENT
- E. SYSTEM\$CLUSTERING\_USAGE

**Answer: A,C**

Explanation:

According to the Snowflake documentation, these two system functions are provided by Snowflake to monitor clustering information within a table. A system function is a type of function that allows executing actions or returning information about the system. A

clustering key is a feature that allows organizing data across micro-partitions based on one or more columns in the table. Clustering can improve query performance by reducing the number of files to scan.

\* `SYSTEM$CLUSTERING_INFORMATION` is a system function that returns clustering information, including average clustering depth, for a table based on one or more columns in the table. The function takes a table name and an optional column name or expression as arguments, and returns a JSON string with the clustering information. The clustering information includes the cluster by keys, the total partition count, the total constant partition count, the average overlaps, and the average depth1.

\* `SYSTEM$CLUSTERING_DEPTH` is a system function that returns the clustering depth for a table based on one or more columns in the table. The function takes a table name and an optional column name or expression as arguments, and returns an integer value with the clustering depth. The clustering depth is the maximum number of overlapping micro-partitions for any micro-partition in the table. A lower clustering depth indicates a better clustering2.

### NEW QUESTION # 31

Which technique will efficiently ingest and consume semi-structured data for Snowflake data lake workloads?

- A. Information schema
- **B. Schema-on-read**
- C. Schema-on-write
- D. `IDEX`

**Answer: B**

### NEW QUESTION # 32

Select the true statements about `TASKS`

- **A. `TASKS` cannot be triggered manually**
- **B. `TASKS` can be used with `STREAMS`**
- C. `TASKS` can be used for change data capture
- **D. `TASKS` can be scheduled for SQL execution**

**Answer: A,B,D**

### NEW QUESTION # 33

An Architect is troubleshooting a query with poor performance using the `QUERY_HISTORY` function. The Architect observes that the `COMPILATIONTIME` is greater than the `EXECUTIONTIME`.

What is the reason for this?

- **A. The query is processing a very large dataset.**
- B. The query is queued for execution.
- C. The query has overly complex logic.
- D. The query is reading from remote storage.

**Answer: A**

### NEW QUESTION # 34

A large manufacturing company runs a dozen individual Snowflake accounts across its business divisions.

The company wants to increase the level of data sharing to support supply chain optimizations and increase its purchasing leverage with multiple vendors.

The company's Snowflake Architects need to design a solution that would allow the business divisions to decide what to share, while minimizing the level of effort spent on configuration and management. Most of the company divisions use Snowflake accounts in the same cloud deployments with a few exceptions for European-based divisions.

According to Snowflake recommended best practice, how should these requirements be met?

- A. Migrate the European accounts in the global region and manage shares in a connected graph architecture. Deploy a Data

Exchange.

- B. Deploy a Private Data Exchange in combination with data shares for the European accounts.
- **C. Deploy a Private Data Exchange and use replication to allow European data shares in the Exchange.**
- D. Deploy to the Snowflake Marketplace making sure that `invoker_share()` is used in all secure views.

**Answer: C**

Explanation:

According to Snowflake recommended best practice, the requirements of the large manufacturing company should be met by deploying a Private Data Exchange in combination with data shares for the European accounts. A Private Data Exchange is a feature of the Snowflake Data Cloud platform that enables secure and governed sharing of data between organizations. It allows Snowflake customers to create their own data hub and invite other parts of their organization or external partners to access and contribute data sets. A Private Data Exchange provides centralized management, granular access control, and data usage metrics for the data shared in the exchange<sup>1</sup>. A data share is a secure and direct way of sharing data between Snowflake accounts without having to copy or move the data. A data share allows the data provider to grant privileges on selected objects in their account to one or more data consumers in other accounts<sup>2</sup>. By using a Private Data Exchange in combination with data shares, the company can achieve the following benefits:

- \* The business divisions can decide what data to share and publish it to the Private Data Exchange, where it can be discovered and accessed by other members of the exchange. This reduces the effort and complexity of managing multiple data sharing relationships and configurations.
- \* The company can leverage the existing Snowflake accounts in the same cloud deployments to create the Private Data Exchange and invite the members to join. This minimizes the migration and setup costs and leverages the existing Snowflake features and security.
- \* The company can use data shares to share data with the European accounts that are in different regions or cloud platforms. This allows the company to comply with the regional and regulatory requirements for data sovereignty and privacy, while still enabling data collaboration across the organization.
- \* The company can use the Snowflake Data Cloud platform to perform data analysis and transformation on the shared data, as well as integrate with other data sources and applications. This enables the company to optimize its supply chain and increase its purchasing leverage with multiple vendors.

## NEW QUESTION # 35

.....

DumpExam exam material is best suited to busy specialized who can now learn in their seemly timings. The ARA-C01 Exam dumps have been gratified in the PDF format which can certainly be retrieved on all the digital devices, including; Smartphone, Laptop, and Tablets. There will be no additional installation required for ARA-C01 certification exam preparation material. Also, this PDF can also be got printed. And all the information you will seize from ARA-C01 Exam PDF can be verified on the Practice software, which has numerous self-learning and self-assessment features to test their learning. Our software exam offers you statistical reports which will upkeep the students to find their weak areas and work on them.
