

# DA0-001 Reliable Dumps Book - Unparalleled CompTIA Data+ Certification Exam

P.S. Free & New DA0-001 dumps are available on Google Drive shared by ValidBraindumps: <https://drive.google.com/open?id=1zDozKnSSGppEcePjdiMLrfdCP-ZyYvh>

You may think choosing DA0-001 practice materials at the first time is a little bit like taking gambles. However, you can be assured by our DA0-001 learning quiz with free demos to take reference, and professional elites as your backup. They are a bunch of censorious elites who do not compromise on any errors happened on our DA0-001 Training Materials. So their accuracy rate is unbelievably high and helped over 98 percent of exam candidates pass the DA0-001 exam.

CompTIA Data+ Certification exam is ideal for professionals who are interested in data analytics, including data analysts, data scientists, business analysts, and database administrators. CompTIA Data+ Certification Exam certification can help professionals gain a competitive edge in the job market as it validates their expertise in data analytics.

## DA0-001 Reliable Study Materials - DA0-001 Valid Exam Topics

Success does not come only from the future, but it continues to accumulate from the moment you decide to do it. At the moment you choose DA0-001 practice quiz, you have already taken the first step to success. The next thing you have to do is stick with it. DA0-001 Training Materials will definitely live up to your expectations. Not only our DA0-001 study materials contain the latest exam questions and answers, but also the pass rate is high as 98% to 100%.

## What is the salary of the CompTIA DA0-001 Exam

The Average salary of different countries for CompTIA DA0-001 professionals:

- United Kingdom: Pound 45489
- United States: USD 55,000 per year
- India: INR 4293726 per year

The benefits of obtaining the CompTIA Data+ Certification include increased job opportunities, higher earning potential, and the ability to work in a variety of industries, including healthcare, finance, and government. CompTIA Data+ Certification Exam certification is also a prerequisite for higher-level certifications, such as the CompTIA Cybersecurity Analyst (CySA+) and the CompTIA Advanced Security Practitioner (CASP+).

## CompTIA Data+ Certification Exam Sample Questions (Q358-Q363):

### NEW QUESTION # 358

Joseph is interpreting a left skewed distribution of test scores. Joe scored at the mean, Alfonso scored at the median, and Gaby scored at the end of the tail.

Who had the highest score?

- A. Joe
- B. Alfonso
- C. Gaby
- D. Joseph

**Answer: B**

Explanation:

Alfonso had the highest score. A left skewed distribution is a distribution where the tail is longer on the left side than on the right side, meaning that most of the values are clustered on the right side and there are some outliers on the left side. In a left skewed distribution, the mean is less than the median, which is less than the mode. Therefore, Joseph, who scored at the mean, had the lowest score, Gaby, who scored at the end of the tail, had the second lowest score, and Alfonso, who scored at the median, had the highest score.

### NEW QUESTION # 359

A recurring event is being stored in two databases that are housed in different geographical locations. A data analyst notices the event is being logged three hours earlier in one database than in the other database. Which of the following is the MOST likely cause of the issue?

- A. The second database is logging incorrectly.
- B. The databases are recording different events.
- C. The data analyst is not querying the databases correctly.
- D. The databases are recording the event in different time zones.

**Answer: D**

Explanation:

The most likely cause of the issue is that the databases are recording the event in different time zones. For example, if one database is in New York and the other database is in Los Angeles, there is a three-hour difference between them. Therefore, an event that occurs at 12:00 PM in New York would be recorded as 9:

00 AM in Los Angeles. To avoid this issue, the databases should either use a common time zone or convert the timestamps to a standard format. Therefore, option C is correct.

Option A is incorrect because the data analyst is not querying the databases incorrectly, but rather observing a discrepancy in the timestamps.

Option B is incorrect because the databases are recording the same event, but with different timestamps.

Option D is incorrect because the second database is not logging incorrectly, but rather using a different time zone.

### NEW QUESTION # 360

Given the following customer and order tables:

Which of the following describes the number of rows and columns of data that would be present after performing an INNER JOIN

of the tables?

- A. Eight rows, seven columns
- B. Seven rows, eight columns
- C. Nine rows, five columns
- D. Five rows, eight columns

**Answer: B**

Explanation:

Explanation

This is because an INNER JOIN is a type of join that combines two tables based on a matching condition and returns only the rows that satisfy the condition. An INNER JOIN can be used to merge data from different tables that have a common column or a key, such as customer ID or order ID. To perform an INNER JOIN of the customer and order tables, we can use the following SQL statement:

```
SELECT * FROM customer INNER JOIN order ON customer.customer_id = order.customer_id;
```

This statement will select all the columns (\*) from both tables and join them on the customer ID column, which is the common column between them. The result of this statement will be a new table that has seven rows and eight columns, as shown below:

customer_id	first_name	last_name	email	order_id	order_date	product	quantity
1	John	Smith	john.smith@email.com	1	2020-01-01	Book	2
2	Jane	Doe	jane.doe@email.com	2	2020-01-02	Pen	5
3	Bob	Lee	bob.lee@email.com	3	2020-01-03	Notebook	3
4	Mia	Chen	mia.chen@email.com	4	2020-01-04	Mug	4
5	Raj	Patel	raj.patel@email.com	null	null	null	null
null	null	null	null	null	null	null	null

The reason why there are seven rows and eight columns in the result table is because:

There are seven rows because there are six customers and six orders in the original tables, but only five customers have matching orders based on the customer ID column. Therefore, only five rows will have data from both tables, while one row will have data only from the customer table (customer 5), and one row will have no data at all (null values).

There are eight columns because there are four columns in each of the original tables, and all of them are selected and joined in the result table. Therefore, the result table will have four columns from the customer table (customer ID, first name, last name, and email) and four columns from the order table (order ID, order date, product, and quantity).

#### NEW QUESTION # 361

Given the following data:

Name	Gender	Age	Annual income
Ralph	M	27	\$75,000
Jessie	F	3	\$75,000
Monica	F	31	\$125,000
Carlos	M	53	\$75
Sara	F	43	\$0

Which of the following BEST describes the data set?

- A. The data is incomplete.
- B. The data is inconsistent.**
- C. There is data bias.
- D. The data is outliers.

**Answer: B**

Explanation:

This is because inconsistency is a type of data quality issue that occurs when the data does not follow a common format, structure, or rule across different sources or systems, which can affect the efficiency and performance of the analysis or process. Inconsistency can be caused by having different spellings, punctuations, capitalizations, or abbreviations for the same or similar values in a data set, such as "M", "m",

"Male", or "male" for gender in this case. Inconsistency can be eliminated or reduced by using data cleansing techniques, such as standardizing or normalizing the data values. The other options are not correct descriptions of the data set. Here is why:

\* Data bias is a type of data quality issue that occurs when the data is not representative or proportional of the population or the parameter, which can affect the validity and reliability of the analysis or process.

Data bias can be caused by having a sample that is too small, too large, or too skewed for the population or the parameter, such as having only male customers for a product that targets both genders in this case. Data bias can be eliminated or reduced by using sampling techniques, such as stratified or cluster sampling.

\* The data is incomplete is a type of data quality issue that occurs when the data is absent or missing in a data set, which can affect the accuracy and reliability of the analysis or process. The data is incomplete can be caused by various factors, such as human error, system error, or non-response. The data is incomplete can be addressed by using various methods, such as replacing or imputing the missing values with some reasonable estimates, such as mean, median, mode, or regression.

\* The data is outliers is a type of data quality issue that occurs when the data has values that are unusually high or low compared to the rest of the data set, which can affect the quality and validity of the analysis or process. The data is outliers can be caused by various factors, such as measurement error, natural variation, or extreme events. The data is outliers can be addressed by using various methods, such as removing or filtering out the outliers, or using robust statistics that are less sensitive to outliers, such as median, interquartile range, or box plot.

#### NEW QUESTION # 362

Given the data below:

First,Last,Company,Phone_number
John,Smith,Lee Shoes,(617) 310-5525
Charles,Wilson,Space Missiles Inc.,(203) 528-4466
Margaret,Lee,Lion Electronics,(515) 713-4817
Jennifer,Gonzalez,Private Financial Ltd.,(901) 207-1311

In which of the following file formats is the data presented?

- A. RIF
- B. XML
- C. CSV**

- D. Xs

#### Answer: C

Explanation:

The data is presented in a CSV (comma-separated values) file format, which is a plain text format that stores tabular data. Each line of the file is a data record, and each record consists of one or more fields separated by commas. The first line of the file usually contains the names of the fields, also known as the header. In this case, the data has four fields: Name, Age, Gender, and Occupation. Therefore, the correct answer is B.
