## CISSP Practice Questions: Certified Information Systems Security Professional (CISSP) & CISSP Exam Dumps Files

We can offer further help related with our CISSP study engine which win us high admiration. By devoting in this area so many years, we are omnipotent to solve the problems about the CISSP practice questions with stalwart confidence. Providing services 24/7 with patient and enthusiastic staff, they are willing to make your process more convenient. So, if I can be of any help to you in the future,

please feel free to contact us at any time on our CISSP Exam Braindumps.

## ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q169-Q174):

### NEW QUESTION # 169

Which of the following describes a technique in which a number of processor units are employed in a single computer system to increase the performance of the system in its application environment above the performance of a single processor of the same kind?

- A. Multiprogramming
- **B. Multiprocessing**
- C. Pipelining
- D. Multitasking

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

Multiprocessing is an organizational technique in which a number of processor units are employed in a single computer system to increase the performance of the system in its application environment above the performance of a single processor of the same kind. In order to cooperate on a single application or class of applications, the processors share a common resource. Usually this resource is primary memory, and the multiprocessor is called a primary memory multiprocessor. A system in which each processor has a private (local) main memory and shares secondary (global) memory with the others is a secondary memory multiprocessor, sometimes called a multicomputer system because of the looser coupling between processors. The more common multiprocessor systems incorporate only processors of the same type and performance and thus are called homogeneous multiprocessors; however, heterogeneous multiprocessors are also employed. A special case is the attached processor, in which a second processor module is attached to a first processor in a closely coupled fashion so that the first can perform input/ output and operating system functions, enabling the attached processor to concentrate on the application workload.

Incorrect Answers:

A: The concurrent operation by one central processing unit of two or more processes.

B: The interleaved execution of two or more programs by a computer, in which the central processing unit executes a few instructions from each program in succession.

C: A procedure for processing instructions in a computer program more rapidly, in which each instruction is divided into numerous small stages, and a population of instructions are in various stages at any given time. One instruction does not have to wait for the previous one to complete all of the stages before it gets into the pipeline. It would be similar to an assembly chain in the real world.

### NEW QUESTION # 170

Which choice below is NOT an element of BCP plan approval and implementation?

- A. Creating an awareness of the plan
- **B. Executing a disaster scenario and documenting the results**
- C. Updating the plan regularly and as needed
- D. Obtaining senior management approval of the results

**Answer: B**

Explanation:

Answer "Executing a disaster scenario and documenting the results" is a distracter, although it could be considered a loose description of disaster recovery plan testing.

The other three choices are primary elements of BCP approval, implementation, and maintenance.

### NEW QUESTION # 171

Within a large organization, what business unit is BEST positioned to initiate provisioning and deprovisioning of user accounts?

- A. Information technology (IT)
- B. Training department
- C. Human resources
- D. Internal audit

**Answer: C**

### NEW QUESTION # 172

A device that is used to monitor Internet Service Provider (ISP) data traffic is called:

- A. Carnivore
- B. Key manager
- C. Echelon
- D. Escrowed encryption

**Answer: A**

Explanation:

Carnivore is a device used by the US FBI to monitor ISP traffic. (S.P.

Smith, et. al., Independent Technical Review of the Carnivore System Draft report, US Department of Justice Contract # 00-C-328 IITRI, CR-022-

2 16, Nov 17, 2000). Answer b, Echelon, refers to a cooperative, worldwide signal intelligence system that is run by the NSA of the United

States, the Government Communications Head Quarters (GCHQ) of

England, the Communications Security Establishment (CSE) of

Canada, the Australian Defense Security Directorate (DSD), and the

General Communications Security Bureau (GCSB) of New Zealand.

These organizations are bound together under a secret 1948 agreement,

UKUSA, [European Parliament, Development of Surveillance Technology

and the Risk of Abuse of Economic Information, Luxembourg

(April 1999), PE 166.184/Part 3 /4]. Answer c is a distracter and is discussed in the questions and answers of Chapter 4, Cryptography.

Answer d is a distracter.

### NEW QUESTION # 173

Which of the following documents specifies services from the client's viewpoint?

- A. Service level report
- B. Service level agreement (SLA)
- C. Service Level Requirement (SLR)
- D. Business impact analysis (BIA)

**Answer: B**

### NEW QUESTION # 174

.....

They put all their efforts to maintain the top standard of ISC CISSP exam questions all the time.
