

Formats of PDFVCE Updated 1z0-134 Exam Practice Questions

Do you want to pass 1z0-134 exam in one time? PDFVCE exists for the purpose of fulfilling your will, and it will be your best choice because it can meet your needs. After you buy our 1z0-134 Dumps, we promise you that we will offer free update service in one year. If you fail the exam, we also promise full refund.

Oracle 1z1-134 exam is intended for individuals who have already obtained the Oracle Certified Professional (OCP) certification in WebLogic Server 12c. 1z0-134 exam is a part of the Oracle Certified Master (OCM) certification, which is the highest level of certification offered by Oracle. Passing 1z0-134 exam demonstrates that the candidate has a deep understanding of advanced WebLogic Server concepts and can handle complex administration tasks.

Oracle 1z0-134 exam is a two-hour proctored test that examines an individual's understanding of advanced concepts in administering WebLogic Server 12c. 1z0-134 Exam is a combination of multiple-choice questions and performance-based ones. To pass 1z0-134 exam, an individual must achieve a minimum score of 63%. The Oracle 1z0-134 certification serves as evidence that an individual has acquired extensive knowledge and expertise needed to manage the massive and distributed weblogic instances effectively. Additionally, this certification serves as an advantage for job seekers who work as weblogic administrators.

Test 1z0-134 Voucher, Test 1z0-134 Passing Score

Once you learn all 1z0-134 questions and answers in the study guide, try PDFVCE's innovative testing engine for exam like 1z0-134 practice tests. These tests are made on the pattern of the Oracle real exam and thus remain helpful not only for the purpose of revision but also to know the real exam scenario. To ensure excellent score in the exam, PDFVCE's braindumps are the real feast for all exam candidates. They contain questions and answers on all the core points of your exam syllabus. Most of these questions are likely to appear in the 1z0-134 Real Exam.

Oracle WebLogic Server 12c: Advanced Administrator II Sample Questions (Q75-Q80):

NEW QUESTION # 75

Examine the domain diagram:

Assume all servers are up and running and you have just started an offline WLST interactive session. Assume further that the username/password "weblogic/Welcome1" maps to a valid administrator.

You type two lines of WLST code:

```
connect('weblogic','Welcome1','host02.acme.com:7101')
print cmo.getType() + '!' + cmo.getName()
```

What will be printed? (Choose the best answer.)

- A. Machine:machine02
- B. DomainRuntime:server03
- C. Domain:TestDomain
- D. Session:weblogic
- E. Servers:server03

Answer: C

Explanation:
Explanation

Example: The following example displays information about the current MBean, cmo.

```
wls:/mydomain/serverConfig> cmo.getType()
'Domain'
```

NEW QUESTION # 76

You want to create a WebLogic Server (WLS) Work Manager with a Response Time Request Class of one second. You start to create the following WLST script:

Which two can replace the missing sequence to finish this script? (Choose two.)

- A. `managedServer=getMBean('/Servers/ManagedServer')cmo.addTarget(managedServer)cmo.setWorkManager(getMBean('/SelfTuning/wls_domain/WorkManagers/MyWorkManager'))`
- B. `cd('edit:/Servers/ManagedServer')cmo.addTarget(getMBean('/SelfTuning/wls_domain/ResponseTimeRequestClasses/MyResponseTime'))cmo.addTarget(getMBean('/SelfTuning/wls_domain/WorkManagers/MyWorkManager'))`
- C. `managedServer=getMBean('/Servers/ManagedServer')cmo.addTarget(managedServer)cd('edit:/SelfTuning/wls_domain/WorkManagers/MyWorkManager')cmo.setResponseTimeRequestClass(getMBean('/SelfTuning/wls_domain/ResponseTimeRequestClasses/MyResponseTime'))`
- D. `cmo.addTarget('/Servers/ManagedServer')cd('/SelfTuning/wls_domain/WorkManagers/MyWorkManager')cmo.setResponseTimeRequestClass('/SelfTuning/wls_domain/ResponseTimeRequestClasses/MyResponseTime')`
- E. `cmo.addTarget(getMBean('/Servers/ManagedServer'))cd('edit:/SelfTuning/wls_domain/WorkManagers/MyWorkManager')cmo.setResponseTimeRequestClass(getMBean('/SelfTuning/wls_domain/ResponseTimeRequestClasses/MyResponseTime'))`

Answer: C,E

NEW QUESTION # 77

Your domain is experiencing some intermittent problems that you are not able to figure out on your own. You have opened a case with Oracle Support to help you figure out the problem. The support engineer would like to use the WebLogic Diagnostic Framework (WLDF) to obtain an overall view of your WebLogic Server environment to try to narrow the problem to a particular subsystem.

What WLDF data does the support engineer request from you? (Choose the best answer.)

- A. Diagnostic image snapshot
- B. Instrumentation log
- C. Specific harvested metrics
- D. Java Flight Recording of the JVM

Answer: A

Explanation:

Diagnostic Image Capture gathers the most common sources of the key server state used in diagnosing problems. It packages that state into a single artifact, the Diagnostic Image.

NEW QUESTION # 78

Your clients are connected to distributed destinations to consume messages sent to various JMS topics.

Recently, JMS connections got interrupted due to a network failure and your clients dropped their connections as well.

How would you ensure seamless failover for your clients when a distributed destination fails? (Choose the best answer.)

- A. Set AutomaticClientReconnect to Enabled in the Administration Console under the destination configuration general page.
- B. No action should be needed at the client's level if the failover is being handled properly at the cluster level.
- C. Set the ClientReconnectOptions parameter to Automatic in the Administration Console under the destination configuration general page.
- D. Implement an automatic reconnect mechanism in the client exception handler.

Answer: D

Explanation:

A simple way to failover a client connected to a failed distributed destination is to write reconnect logic in the client code to connect to the distributed destination after catching onException.

NEW QUESTION # 79

You are implementing leasing functionality within your environment to ensure exclusive ownership of a cluster-wide entity.

Which type of leasing requires that Node Manager is configured and running? (Choose the best answer.)

- A. high-availability in-memory leasing
- B. high-consensus leasing
- C. high-availability database leasing
- D. non-database consensus leasing

Answer: D

Explanation:

Setting Migration Basis to Consensus leasing means that the member servers maintain leasing information in-memory, which removes the requirement of having a high-availability database to use leasing. This version of leasing requires that you use Node Manager to control servers within the cluster.
