So our XK0-006 certification files are approximate to be perfect and will be a big pleasant surprise after the clients use them.

CompTIA Linux+ Certification Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

A Linux administrator wants to use AI to deploy infrastructure as code. Which of the following is a best practice regarding the use of AI for this task?

- A. Linting generated code
- B. Merging CI/CD pipelines
- C. Generating monolithic code
- D. Using copy and paste when possible

Answer: A

Explanation:

Linting ensures that AI-generated infrastructure-as-code (IaC) follows proper syntax, formatting, and best practices. This helps prevent errors, enforces consistency, and improves security before deployment.

NEW QUESTION # 24

Which of the following actions is required to establish passwordless SSH authentication?

- A. Copy the public and private keys to the remote server.
- B. Copy the private SSH key to the remote server.
- C. Generate public and private keys on the remote server.
- **D. Copy the public SSH key to the remote server.**

Answer: D

Explanation:

Copying the public SSH key to the remote server's `authorized_keys` file is all that's needed to enable passwordless SSH authentication.

NEW QUESTION # 25

A Linux systems administrator is resolving a privileged access issue for users who are members of an admin group. Which of the following configuration files should the administrator update so the users in the admin group will have root privileged access to the Linux system?

- A. `/etc/group`
- B. `/etc/login.defs`
- C. `/etc/shadow`
- **D. `/etc/sudoers`**

Answer: D

Explanation:

The `/etc/sudoers` file controls which users and groups can elevate privileges via `sudo`. By adding a line such as `%admin ALL=(ALL) ALL` to `/etc/sudoers`, members of the admin group gain root-level access.

NEW QUESTION # 26

A systems administrator wants to review the logs from an Apache 2 `error.log` in real time and save the information to another file for later review. Which of the following commands should the administrator use?

- A. `tail -f /var/log/apache2/error.log > logfile.txt`
- B. `tail -f /var/log/apache2/error.log | logfile.txt`
- **C. `tail -f /var/log/apache2/error.log | tee logfile.txt`**
- D. `tail -f /var/log/apache2/error.log >> logfile.txt`

Answer: C

Explanation:

Using `tee` allows output to be viewed in real time on the terminal while simultaneously writing it to `logfile.txt`. This meets both requirements: monitoring live updates and saving them for later review.

NEW QUESTION # 27

A systems administrator is creating a backup copy of the `/home` directory. Which of the following commands allows the administrator to archive and compress the directory at the same time?

- A. `cpio -o /backups/home.tar.xz /home/`
- B. `dd of=/backups/home.tar.xz if=/home/`
- C. `rsync -z /backups/home.tar.xz /home/`
- **D. `tar -cJf /backups/home.tar.xz /home/`**

Answer: D

Explanation:

The `tar -cJf` command creates (`-c`) an archive, compresses it with XZ (`-J`), and writes it to a file (`-f`). This allows archiving and

compression of the /home/ directory in one step.

NEW QUESTION # 28
