So we try our best to extend our dumps, and our Actual4dump elite comprehensively analyze the dumps so that you are easy to use it. Besides, we provide one-year free update service to guarantee that the D-ISM-FN-01 Exam Materials you are using are the latest.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

Question:

A company is planning to implement an FC-NVMe SAN. Other than servers with NVMe HBAs, which two other components are required to build this type of SAN?

- A. A dedicated 100 Gb/s Ethernet network
- B. Specialized NVMe-oF drivers on all servers
- **C. NVMe storage systems**
- D. Only NVMe SSDs in servers
- **E. FC-NVMe switches**

Answer: C,E

Explanation:

To implement anFC-NVMe SAN(NVMe over Fibre Channel), you need:

NVMe storage systemsthat expose NVMe namespaces.

FC-NVMe capable switchesthat support the new NVMe protocol over Fibre Channel.

Servers with NVMe HBAs(already mentioned in the question).

* Option B:Ethernet networks are for NVMe-oF over TCP/RoCE, not FC-NVMe.

* Option E:These drivers are for TCP/RoCE, not FC transports.

NEW QUESTION # 16

Question:

When troubleshooting a virtual machine, which file is most likely to provide a detailed history of the VM's behavior?

- A. Memory state file
- **B. Log file**
- C. Virtual disk file
- D. Configuration file

Answer: B

Explanation:

Log files record events and messages related to the operations of a virtual machine. They provide detailed information about the VM's behavior, errors, and system messages, which are crucial for troubleshooting.

NEW QUESTION # 17

Question:

An organization wants to consume compute, network, and storage resources through a self-service portal.

Which cloud service model provides this capability?

- **A. Infrastructure as a Service**
- B. Platform as a Service
- C. Software as a Service
- D. Data as a Service

Answer: A

Explanation:

Infrastructure as a Service (IaaS) is a cloud computing model that provides virtualized computing resources over the internet. It offers fundamental infrastructure services such as compute, storage, and networking, which users can provision and manage through a self-service portal. This model allows organizations to scale resources as needed and pay only for what they use.

NEW QUESTION # 18

Match each OSD (Object Storage Device) feature with its description:

OSD Features	Description	DELL EMC
Flexible data access method	Drives data placement and protection based on the service requirements	
Metadata-driven policy	Abstracts storage from the application and provides a common view independent of location	
Data protection	Supports REST/SOAP APIs and the file sharing protocols, CIFS and NFS, for file services	
Global namespace	Global distribution of objects using either replication or erasure coding

Metadata-driven policy	Drives data placement and protection based on the service requirements
Data protection	Global distribution of objects using either replication or erasure coding
Global namespace	Abstracts storage from the application and provides a common view independent of location

#Flexible data access method: Object storage can offer multiple ways to access and interact with stored data, such as REST/SOAP APIs (for object-based access) and file-sharing protocols (CIFS, NFS) for file-level access.

#Metadata-driven policy: Object storage uses rich metadata to define how objects are placed, protected, and managed, driven by policies that respond to service-level requirements.

#Data protection: Object storage systems implement data protection at a global scale through replication or erasure coding to ensure data durability and availability.

#Global namespace: Object storage abstracts physical locations, providing a single namespace (a unified view) so that applications can seamlessly access data regardless of where it physically resides.

NEW QUESTION # 19

Question:

What is a read miss in cache operations?

- A. Writing data to the cache
- B. Fetching data that is not in cache
- C. Fetching requested data that is already in cache
- D. Deleting data from the cache

Answer: B

Explanation:

A read miss occurs when the data requested by the host is not available in the cache. As a result, the storage system must fetch the data from the slower disk storage (back-end), leading to higher latency.

* Cache hit: Data is already in cache # faster response.

* Cache miss (read miss): Data not in cache # fetched from the disk.
