

NCP-DB-6.10 Download | NCP-DB-6.10 Real Brain Dumps

The pass rate is 98.75% for NCP-DB-6.10 study materials, and if you choose us, we can ensure you that you can pass the exam just one time. NCP-DB-6.10 exam dumps are high-quality and high accuracy, since we have a professional team to compile and examine the questions and answers. What's more, NCP-DB-6.10 exam materials have both questions and answers, and you can check your answers very conveniently after practicing. We offer you free update for one year for NCP-DB-6.10 Study Materials, and our system will send the latest version to your email address automatically, and you need to receive and change your learning ways according to the latest version.

Our NCP-DB-6.10 certification material is closely linked with the test and the popular trend among the industries and provides all the information about the NCP-DB-6.10 test. The answers and questions seize the vital points and are verified by the industry experts. Diversified functions can help you get an all-around preparation for the test. Our online customer service replies the clients' questions about our NCP-DB-6.10 Certification material at any time. So our NCP-DB-6.10 learning file can be called perfect in all aspects.

NCP-DB-6.10 Real Brain Dumps | NCP-DB-6.10 Test Quiz

Due to the shortage of useful practice materials or being scanty for them, many candidates may choose the bad quality exam materials, but more and more candidates can choose our NCP-DB-6.10 study materials. Actually, some practice materials are shooting the breeze about their effectiveness, but our NCP-DB-6.10 training quiz are real high quality practice materials with passing rate up to 98 to 100 percent. And you will be amazed to find that our NCP-DB-6.10 exam questions are exactly the same ones in the real exam.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q113-Q118):

NEW QUESTION # 113

An administrator needs to restore a source database from a snapshot. The database shares the source volume with multiple other databases.

How does NDB handle this database restore operation?

- A. Replaces the source volume with the snapshot volume
- B. Replaces source volume with specific db disks
- C. Copies all database files to the source volume
- D. Copies the specific database files to the source volume

Answer: D

Explanation:

The correct answer is A because NDB handles the database restore operation by copying the specific database files from the

snapshot volume to the source volume, without affecting the other databases that share the same source volume. NDB uses a copy-on-write mechanism to create snapshots and clones, which means that only the changes made to the database files are stored in the snapshot or clone volume, while the original files are kept in the source volume. Therefore, when restoring a source database from a snapshot, NDB only needs to copy the specific database files that have been modified since the snapshot was taken, and overwrite them on the source volume.

NEW QUESTION # 114

An administrator is tasked with auditing NDB SLAs. What data will the administrator be reviewing?

- A. Snapshot schedules
- B. Clone Management
- C. Recovery Time Objective
- D. Data retention policies

Answer: D

Explanation:

NDB SLAs are service level agreements that define the data protection and recovery objectives for NDB-managed databases. NDB SLAs consist of data retention policies that specify how long the snapshots and log backups of a database are kept in the Time Machine. Data retention policies can be customized to meet different business and compliance requirements, such as daily, weekly, monthly, or yearly retention periods. NDB SLAs also determine the frequency and schedule of the snapshots and log backups, as well as the storage location and replication options. An administrator who is tasked with auditing NDB SLAs will be reviewing the data retention policies of each database and Time Machine, as well as the snapshot and log backup history and status. The administrator will also be able to monitor the storage usage and performance of the NDB SLAs, and modify or delete the SLAs as needed. The other options are not part of the NDB SLAs, but rather separate features or concepts of NDB. Snapshot schedules are the intervals at which NDB takes snapshots of the databases, which are determined by the SLAs. Clone management is the process of creating, refreshing, or deleting database clones from the Time Machine. Recovery time objective (RTO) is the maximum acceptable time for restoring a database after a failure, which is influenced by the SLAs, but not defined by them.

NEW QUESTION # 115

An administrator is experiencing issues with NDB and some of its operations. A case has been logged with Nutanix Support and a request has been made to gather a diagnostics bundle. Where are two valid places to generate and download a diagnostics bundle? (Choose two.)

- A. NDB CLI
- B. NDB GUI
- C. Prism Central GUI
- D. Prism Element GUI

Answer: A,B

Explanation:

When an administrator experiences issues with NDB and Nutanix Support requests a diagnostics bundle, it can be generated from two valid locations. The NDB GUI provides an option under the administration or support section to create and download the bundle, offering a user-friendly interface. Alternatively, the NDB CLI allows generation via specific commands (e.g., `era diagnostics collect`), providing a scriptable approach. Both methods are supported for troubleshooting and support purposes.

NEW QUESTION # 116

An administrator needs to roll back an Oracle patch on a database server VM using NDB. What is required for this action to be successful?

- A. The patch must have been applied using NDB.
- B. The database must be shut down.
- C. The patch must have been applied on Grid home only using NDB.
- D. The database must be in read-only mode.

Answer: A

Explanation:

To roll back an Oracle patch on a database server VM using NDB, the patch must have been applied using NDB in the first place. This is because NDB maintains a patch inventory and history for each database server VM and database that it manages. NDB uses this information to determine which patches can be rolled back and how to revert the changes made by the patch. If the patch was applied outside of NDB, NDB would not have the patch information and would not be able to roll back the patch. Therefore, the patch must have been applied using NDB for the rollback action to be successful. The other options are not required for the rollback action. The database does not need to be shut down or in read-only mode, as NDB can perform the rollback operation online. The patch does not need to be applied on Grid home only, as NDB can roll back patches applied on both Grid home and Database home.

NEW QUESTION # 117

Which default roles are available within Era for Role-Based Access Control?

- A. Super Admin
Database Admin
Database Infrastructure Admin
prism Infrastructure Admin
- B. Era Oracle Admin
Era SQLServer Admin
Era PostgreSQL Admin
Era Mariadb Admin
- C. Super Admin
Database Admin
Database Infrastructure Admin
Infrastructure Admin
- D. prism Admin
Era Super Admin
Era Database Admin
Era Infrastructure Admin

Answer: D

Explanation:

Nutanix Era offers Role-Based Access Control capabilities by organically embedding them in the product. It provides the ability to add and remove users from Era, create and assign roles to users, and associate various privileges with a role. The default roles available within Era for Role- Based Access Control are:

prism Admin
Era Super Admin
Era Database Admin
Era Infrastructure Admin

These roles allow for the management of both physical resources like IP addresses and VLANs along with database entities like databases, time-machines, clones, and so on.

NEW QUESTION # 118

.....

With the best quality of NCP-DB-6.10 braindumps pdf from our website, getting certified will be easier and fast. For the preparation of the certification exam, all you have to do is choose the most reliable NCP-DB-6.10 real questions and follow our latest study guide. You can completely rest assured that our NCP-DB-6.10 Dumps Collection will ensure you get high mark in the formal test. You will get lots of knowledge from our website.
