Topic 8	<ul style="list-style-type: none"> Demand Management in SAP S 4HANA: This section covers a comparison of production methods in various manufacturing environments.

SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing Sample Questions (Q27-Q32):

NEW QUESTION # 27

How can you limit the validity of a bill of material (BOM)? Note: There are 2 correct answers to this question.

- A. By material type
- B. By plant
- C. By period
- D. By material status

Answer: B,C

NEW QUESTION # 28

You want to use capacity availability checks for production orders. Which settings have to be made for this?

Note: There are 2 correct answers to this question.

- A. A checking rule must be assigned to the work centers.
- B. The scope of check must be defined in Customizing.
- C. The Relevant for Finite Scheduling indicator must be set.
- D. An overall profile must be assigned in the checking control.

Answer: C,D

NEW QUESTION # 29

During production order creation, several valid production versions are found. How does the system choose the production version?

- A. Validity period or sales order
- B. Planned order or material number
- C. Lot size or material cost
- D. Alphanumeric or quota arrangement

Answer: D

Explanation:

In SAP S/4HANA, when multiple valid production versions (maintained in the material master, MRP 4 view, or transaction MM02) exist during production order creation, the system follows a predefined selection logic:

* Alphanumeric or quota arrangement(A): By default, the system selects the production version with the lowest alphanumeric identifier (e.g., "0001" before "0002") if no other criteria are specified.

Alternatively, if aquota arrangement(transaction MEQ1) is maintained and marked as MRP-relevant, the system uses the quota percentages to distribute production across versions, overriding the alphanumeric logic. This is configured in Customizing (Production > Master Data > Production Versions).

* Option B (Planned order or material number) is incorrect-planned orders inherit versions from MRP, and material number is irrelevant to version selection.

* Option C (Validity period or sales order) is partially true-validity period ensures only active versions are considered-but sales orders do not directly influence version selection unless linked via a specific requirement (e.g., variant configuration), which is not standard.

* Option D (Lot size or material cost) influences version selection only if defined in the production version's lot size range, but it's not the primary method unless customized.

This behavior is documented in SAP's production order creation process.

NEW QUESTION # 30

How can you set up the supply source for the Kanban process in SAP S/4HANA Cloud Private Edition? Note: There are 3 correct answers to this question.

- A. Use run schedule quantities for inhouse production.
- B. Use stock transfer reservations for stock transfer.
- C. Use purchasing costs for automated source prioritization.
- D. Use quotations for internal external procurement.
- E. Use purchase orders for external procurement.

Answer: A,B,E

NEW QUESTION # 31

Which of the following processes lead to an entry in the MRP planning file? Note: There are 2 correct answers to this question.

- A. Changing the storage bin in warehouse management
- B. Changing the procurement type in the product master
- C. Changing the stock in inventory management
- D. Changing the delivery address in transportation management

Answer: B,C
