It is a browser-based IAPP CIPT Practice Exam that works on all major browsers. This means that you won't have to worry about installing any complicated software or plug-ins.

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q222-Q227):

NEW QUESTION # 222
An organization must terminate their cloud vendor agreement immediately. What is the most secure way to delete the encrypted data stored in the cloud?

- A. Obtain a destruction certificate from the cloud vendor.
- B. Invoke the appropriate deletion clause in the cloud terms and conditions.
- C. Destroy all encryption keys associated with the data.
- D. Transfer the data to another location.

Answer: C

Explanation:
Destroying all encryption keys associated with encrypted data stored on a cloud server would make that encrypted data inaccessible even if it still exists on that server 4.

NEW QUESTION # 223

SCENARIO

Clean-Q is a company that offers house-hold and office cleaning services. The company receives requests from consumers via their website and telephone, to book cleaning services. Based on the type and size of service, Clean-Q then contracts individuals that are registered on its resource database - currently managed in-house by Clean-Q IT Support. Because of Clean-Q's business model, resources are contracted as needed instead of permanently employed.

The table below indicates some of the personal information Clean-Q requires as part of its business operations:

Clean-Q has an internal employee base of about 30 people. A recent privacy compliance exercise has been conducted to align employee data management and human resource functions with applicable data protection regulation. Therefore, the Clean-Q permanent employee base is not included as part of this scenario.

With an increase in construction work and housing developments, Clean-Q has had an influx of requests for cleaning services. The demand has overwhelmed Clean-Q's traditional supply and demand system that has caused some overlapping bookings.

Ina business strategy session held by senior management recently, Clear-Q invited vendors to present potential solutions to their current operational issues. These vendors included Application developers and Cloud-Q's solution providers, presenting their proposed solutions and platforms.

The Managing Director opted to initiate the process to integrate Clean-Q's operations with a cloud solution (LeadOps) that will provide the following solution one single online platform: A web interface that Clean-Q accesses for the purposes of resource and customer management. This would entail uploading resource and customer information.

* A customer facing web interface that enables customers to register, manage and submit cleaning service requests online.
* A resource facing web interface that enables resources to apply and manage their assigned jobs.
* An online payment facility for customers to pay for services.

What is a key consideration for assessing external service providers like LeadOps, which will conduct personal information processing operations on Clean-Q's behalf?

- A. Recognizing the value of LeadOps' website holding a verified security certificate.
- B. Establishing a relationship with the Managing Director of LeadOps.
- C. Understanding LeadOps' costing model.
- D. Obtaining knowledge of LeadOps' information handling practices and information security environment.

Answer: D

Explanation:

A key consideration for assessing external service providers like LeadOps, which will conduct personal information processing operations on Clean-Q's behalf, is obtaining knowledge of LeadOps' information handling practices and information security environment.

* Explanation:
* Due Diligence: Evaluating LeadOps' data handling practices ensures that they follow robust data protection principles, including data minimization, purpose limitation, and data retention policies.
* Security Measures: Understanding their information security environment involves assessing technical and organizational measures in place to protect personal data. This includes encryption, access controls, incident response plans, and regular security audits.
* Compliance and Certification: Verifying compliance with recognized standards such as ISO/IEC 27001 can provide assurance that LeadOps follows best practices in information security management.
* Privacy Impact Assessments (PIAs): Conducting a PIA can help identify and mitigate privacy risks associated with outsourcing to LeadOps. It involves evaluating the potential impact on data subjects and implementing appropriate controls to protect their data.
* Contractual Safeguards: Ensuring that contracts with LeadOps include specific data protection clauses, such as data processing agreements (DPAs), to delineate responsibilities and ensure compliance with data protection laws.

NEW QUESTION # 224
What is a main benefit of data aggregation?

- A. It is a good way to achieve de-identification and unlinkabilty.
- B. It allows one to draw valid conclusions from small data samples.
- C. It applies two or more layers of protection to a single data record.
- D. It is a good way to perform analysis without needing a statistician.

Answer: B

Explanation:

NEW QUESTION # 225

When writing security policies, the most important consideration is to?

- **A. Ensure they are based on the organization's risk profile.**
- B. Ensure they cover enough details for common situations.
- C. Require all employees to read and acknowledge their understanding.
- D. Follow industry best practices.

Answer: A

Explanation:
When writing security policies, the most important consideration is to ensure they are based on the organization's risk profile. Security policies need to address the specific risks and threats that the organization faces, taking into account its unique operational environment, assets, and regulatory requirements. Tailoring policies to the risk profile ensures that they are relevant, effective, and comprehensive. According to IAPP, aligning security policies with the organization's risk profile is fundamental to creating a robust and responsive security framework that adequately protects sensitive information and supports compliance efforts.

NEW QUESTION # 226

Which of these actions is NOT generally part of the responsibility of an IT or software engineer?

- A. Providing feedback on privacy policies.
- **B. Certifying compliance with security and privacy law.**
- C. Building privacy controls into the organization's IT systems or software.
- D. Implementing multi-factor authentication.

Answer: B

Explanation:
Providing feedback on privacy policies (A): While not the primary role, IT or software engineers often provide technical insights and feedback on privacy policies to ensure they are implementable within the organization's systems. Reference: IAPP CIPT Body of Knowledge.
Implementing multi-factor authentication (B): IT or software engineers are typically responsible for the implementation of security measures such as multi-factor authentication to protect systems and data.
Reference: IAPP CIPT Body of Knowledge.
Certifying compliance with security and privacy law (C): Certifying compliance is usually the responsibility of compliance officers or legal teams, not IT or software engineers. IT staff may support compliance activities, but certification is not their direct responsibility.
Reference: IAPP CIPT Body of Knowledge.
Building privacy controls into the organization's IT systems or software (D): IT or software engineers are directly involved in embedding privacy controls into systems and applications as part of privacy by design and default. Reference: IAPP CIPT Body of Knowledge.

NEW QUESTION # 227

......

If you have VerifiedDumps CIPT Exam Questions, you don't need a person to help you with reading and explaining the facts. This IAPP CIPT exam questions material is available in pdf so that anyone can study it without any difficulty.
