

Prepare Well With The Best VMware 6V0-21.25 Questions

BTW, DOWNLOAD part of PassTorrent 6V0-21.25 dumps from Cloud Storage: <https://drive.google.com/open?id=1bB3IekSbBdRAH3sOAktfTYpYgmr2Moqa>

The VMware 6V0-21.25 dumps pdf formats are specially created for candidates having less time and a vast syllabus to cover. It has various crucial features that you will find necessary for your VMware vDefend Security for VCF 5.x Administrator (6V0-21.25) exam preparation. Each 6V0-21.25 practice test questions format supports a different kind of study tempo and you will find each VMware 6V0-21.25 Exam Dumps format useful in various ways. For customer satisfaction, PassTorrent has also designed a VMware vDefend Security for VCF 5.x Administrator (6V0-21.25) demo version so the candidate can assure the reliability of the VMware PDF Dumps.

VMware 6V0-21.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Shared Services Platform (SSP): Covers the back-end security data and analytics platform that underpins vDefend security services.
Topic 2	<ul style="list-style-type: none"> Context Aware Firewall and Identity Firewall: Covers advanced firewall controls that use user identity and application context rather than just IP addresses and ports.
Topic 3	<ul style="list-style-type: none"> Security Operations: Covers the ongoing management and operational practices for maintaining security in a private cloud environment.
Topic 4	<ul style="list-style-type: none"> IDPS (Intrusion Detection and Prevention System): Covers inspecting network traffic at every hypervisor and workload level to detect and prevent advanced cyber threats.
Topic 5	<ul style="list-style-type: none"> Security Automation: Covers integrating tools and scripting to automate firewall policy creation, security group management, and network configuration.
Topic 6	<ul style="list-style-type: none"> Private Cloud Data Center Security: Covers foundational concepts for securing workloads and infrastructure within a private cloud data center environment.
Topic 7	<ul style="list-style-type: none"> NTA (Network Traffic Analysis) & NDR (Network Detection and Response): Covers proactive threat detection and response using NTA and NDR capabilities to secure virtualized workloads and environments.
Topic 8	<ul style="list-style-type: none"> VMware vDefend Firewall Architecture: Covers the design and components of VMware's software-defined, distributed security architecture.

- Advanced Threat Prevention: Covers a suite of analysis tools designed to defend against both known and unknown advanced attack vectors.

Pass Guaranteed High Hit-Rate VMware - Test 6V0-21.25 Questions Fee

The PassTorrent wants to help students ace the certification exam preparation. To achieve this goal the PassTorrent is offering real, valid, and updated exam questions in three different formats. These VMware 6V0-21.25 exam questions formats are PDF file, desktop practice test software, and web-based practice test software. All these three 6V0-21.25 Exam Practice question formats are easy to use. The 6V0-21.25 desktop practice test software and web-based practice test software both are the easy-to-use mock VMware vDefend Security for VCF 5.x Administrator (6V0-21.25) exam. These 6V0-21.25 mock exams are designed to simulate the conditions of a real exam.

VMware vDefend Security for VCF 5.x Administrator Sample Questions (Q12-Q17):

NEW QUESTION # 12

In vDefend Malware Detection and Prevention, when does local file analysis occur?

- A. Before Cloud file analysis and after hash comparison
- B. After Cloud file analysis and after hash comparison
- C. Before Cloud file analysis and before hash comparison
- D. After Cloud file analysis and before hash comparison

Answer: A

Explanation:

The vDefend malware detection pipeline operates in a highly optimized sequence to minimize performance overhead and network bandwidth. When a file is extracted, the first step is to check its hash against a cache of known good/bad files (Hash Comparison). If the hash is unknown, the system proceeds to Local File Analysis (static analysis leveraging AI/ML models on the appliance). If the local analysis determines the file requires deeper inspection, it is only then sent off for Cloud File Analysis (dynamic sandboxing). Therefore, local analysis occurs strictly after hash comparison but before cloud analysis.

NEW QUESTION # 13

Which three best practices enhance malware detection accuracy in an NSX-powered private cloud?

(Choose three)

Response:

Regularly update threat intelligence subscriptions

- A. Enable logging for all DNS traffic only
- B. Apply malware prevention profiles based on workload sensitivity
- C. Integrate NSX alerts with SIEM tools
- D. Disable behavioral analysis to improve performance

Answer: A,C,D

NEW QUESTION # 14

Which of the following regular expressions can be used to define a custom FQDN or URL in the vDefend Firewall Context Profiles?

- A. eng*.vmware.com
- B. *eng.vmware.com
- C. *eng*.vmware.com
- D. eng.*vmware.com

Answer: B

Explanation:

In VMware vDefend (NSX) Context Profiles, FQDN filtering supports the use of wildcards to cover multiple subdomains. However, the wildcard character (*) must be placed exactly at the beginning of the FQDN string (e.g., *.vmware.com or *eng.vmware.com). Using partial regular expressions or placing wildcards in the middle or at the end of a hostname string (like options A, B, and C) is not supported for standard FQDN attribute matching.

NEW QUESTION # 15

Which of the following are vDefend Advanced Threat Prevention capabilities? (Select all that apply)

- A. Gateway Firewall
- B. Malware Analysis/Sandboxing
- C. Network Traffic Analysis (NTA)
- D. Intrusion Detection/Protection Systems (IDS/IPS)
- E. Network Detection and Response (NDR)

Answer: B,C,D,E

Explanation:

VMware vDefend Advanced Threat Prevention (ATP) is a suite of security features designed to move beyond traditional L4-L7 stateful firewalling. It specifically encompasses advanced inspection and anomaly detection tools. These include Distributed and Gateway IDS/IPS (signature-based threat detection), Network Traffic Analysis (NTA - behavioral anomaly detection), Network Detection and Response (NDR - correlating events into actionable campaigns/incidents), and Malware Prevention (which includes file extraction, static analysis, and dynamic sandboxing). The Gateway Firewall (Option C) is considered a foundational firewalling capability rather than an "Advanced Threat Prevention" specific feature.

NEW QUESTION # 16

Which capability of vDefend helps simplify the creation of firewall rules based on VM context?

Response:

- A. Manual host affinity mapping
- B. Automatic policy tagging using VM metadata
- C. Importing rules from the vSphere Events log
- D. Use of Logical Switch MACs

Answer: B

NEW QUESTION # 17
