### **SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q36-Q41):**

#### **NEW QUESTION # 36**

Which of the following master data types requires manual migration from Test to Production in a Greenfield migration?

- A. Relations and relation entries
- B. Translations
- **C. Enumerations**
- D. Clause Library

**Answer: C**

Explanation:

In SAP Ariba Greenfield deployments, Enumerations (picklist value lists) require manual migration because they are not included in Intelligent Configuration Manager (ICM) bundles. Enumerations must be manually exported from Test and imported into Production to ensure correct picklist values for fields that depend on them.

Other master data types like Clause Library and Relations can be migrated using standard migration tools or processes. Translations are handled via AML & Translations Upload.

Ensuring enumerations are migrated correctly is critical because missing or inconsistent enumerations can cause field validation errors and disrupt system usage.

#### **NEW QUESTION # 37**

Which of the following can be used to define relation types and establish a custom relationship? (Select 2 correct answers)

- A. A custom Enumeration such as Contracts\_Contract\_Type
- **B. A custom Flex Master Data Template such as vrealm\_1936.fmd\_58984.Hospital**
- **C. A standard class such as ariba.basic.core.CommodityCode**
- D. A custom Form Template such as vrealm\_1936.formDoc\_18697.LessonsLearned

**Answer: B,C**

Explanation:

In SAP Ariba, relation types can be defined using custom Flex Master Data (FMD) templates and standard classes such as ariba.basic.core.CommodityCode. These define valid relationships between fields, allowing dependent picklists or filtering logic in forms. Custom enumerations are static lists and are not used to establish dynamic relations, and custom form templates are for form layouts and do not define data relationships.
