

Exam VMware 2V0-15.25 Voucher, Valid Exam 2V0-15.25 Vce Free

P.S. Free 2026 VMware 2V0-15.25 dumps are available on Google Drive shared by Pass4sureCert: https://drive.google.com/open?id=1x6kN2v-dUbYfXnZXIq3VQ2_BinVtnulD

Customers can start using the VMware 2V0-15.25 Exam Questions instantly just after purchasing it from our website for the preparation of the 2V0-15.25 certification exam. They can also evaluate the VMware Cloud Foundation 9.0 Support (2V0-15.25) practice test material before buying with a free demo. The users will receive updates 365 days after purchasing. And they will also get a 24/7 support system to help them anytime if they got stuck somewhere or face any issues while preparing for the 2V0-15.25 Exam.

VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.
Topic 2	<ul style="list-style-type: none">• IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.
Topic 3	<ul style="list-style-type: none">• Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.
Topic 4	<ul style="list-style-type: none">• VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.

- Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.

2V0-15.25 Exam Guide and 2V0-15.25 Exam Prep - 2V0-15.25 Exam Torrent

If you use the Pass4sureCert VMware 2V0-15.25 Study Materials, you can reduce the time and economic costs of the exam. It can help you to pass the exam successfully. Before you decide to buy our VMware 2V0-15.25 exam materials, you can download our free test questions, including the PDF version and the software version. If you need software versions please do not hesitate to obtain a copy from our customer service staff.

VMware Cloud Foundation 9.0 Support Sample Questions (Q48-Q53):**NEW QUESTION # 48**

A user wishes to publish a VMware Cloud Foundation (VCF) Operations Orchestrator workflow to their VCF Automation project catalog, but is blocked from publishing any workflows.

The following information has been provided:

* In the VCF Automation Organization portal, the user cannot see the Workflows option under Content Hub.

* The organization is not a Provider Consumption Organization.

Which are the two likely causes of this issue? (Choose two.)

- A. The user is logged in the Project Advanced User rights
- B. The user is logged in with Project Administrator rights.
- C. An external VCF Operations Orchestrator is not integrated with their Organization.
- D. The user is logged in with Project User rights.
- E. An embedded VCF Operations Orchestrator is not integrated with their Organization.

Answer: C,E

Explanation:

In VMware Cloud Foundation 9.0, publishing a VCF Operations Orchestrator workflow to a VCF Automation project catalog requires that the Organization has a valid integration with VCF Operations Orchestrator. The question states that the user cannot see the Workflows option under Content Hub, and the organization is not a Provider Consumption Organization (PCO). According to the VCF 9.0 documentation, only organizations with VCF Operations Orchestrator integration are allowed to publish workflows into the catalog. Both embedded and external orchestrator integrations must be configured depending on the environment. If no orchestrator (embedded or external) is integrated with the organization, workflows cannot be listed or published. This aligns with the documented VCF Automation and VCF Operations Orchestrator design requirements, which specify that workflow publishing is only available when the orchestrator instance is properly registered.

Additionally, user role permission issues could prevent workflow visibility, but the key blockers described in the scenario are the missing workflow section and the organization type. Because the organization is not a PCO, advanced provider features-including workflow publishing-are disabled unless a proper orchestrator integration exists. Therefore, the two most likely causes are:

* A: An external VCF Operations Orchestrator is not integrated with their Organization.

* D: An embedded VCF Operations Orchestrator is not integrated with their Organization.

These two conditions directly match the documented behavior in VMware Cloud Foundation 9.0.

NEW QUESTION # 49

An administrator is creating a new workload domain from VMware Cloud Foundation (VCF) Operations.

They are blocked at the Hosts selection screen as no ESX hosts are available. They see the following message:

"No suitable hosts available to create a VI workload domain. Hosts must be unassigned, commissioned with at least one physical NIC and the same storage type as the VI workload domain, and the ESX version must be compatible with the lowest ESX version present in the management domain." How can the administrator commission new hosts to enable the creation of the VI workload domain?

- A. Using the VCF Installer.
- B. Using the vSphere client.

- C. Using the Cloud Builder.
- **D. Using VCF Operations.**

Answer: D

Explanation:

In VMware Cloud Foundation 9.0, all host commissioning operations are performed through VCF Operations, not through vSphere Client, Cloud Builder, or the VCF Installer. Once VCF is deployed, Cloud Builder is no longer used, and the VCF Installer is for lifecycle and bundle management—not for host workflows. The vSphere Client also cannot commission hosts because host commissioning is a foundational VCF workflow requiring hardware validation, storage type checks, NIC checks, HCL conformance, and version compatibility.

The error message provided:

"Hosts must be unassigned, commissioned with at least one physical NIC and the same storage type... and the ESX version must be compatible..." is a standard VCF 9.0 validation message shown when no commissioned hosts matching the workload domain requirements exist. VMware documentation states that hosts must be commissioned under:

VCF Operations # Fleet Management # Hosts # Commission Host

Here, VCF validates:

- * Storage type (vSAN ESA, vSAN OSA, NFS, FC, etc.)
- * Network pool membership (matching the WLD plan)
- * ESXi version compatibility with the Management Domain baseline
- * NIC mapping and certifications

Until hosts are commissioned, they cannot appear in the workload domain creation wizard.

Thus, the correct method to commission hosts is D. Using VCF Operations.

NEW QUESTION # 50

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

- * The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.
- * VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.

The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- A. Deploy a new VCF workload domain.
- **B. Add the SDDC Manager integration for the VCF instance.**
- C. Deploy an additional VCF workload domain cluster.
- D. Trigger an inventory synch in VCF Operations fleet management.

Answer: B

NEW QUESTION # 51

An administrator is responsible for managing a VMware Cloud Foundation (VCF) Fleet that is configured as follows:

- * Single VCF instance with a single workload domain.
- * The Workload Domain has a single 5-node VMware vSAN Express Storage Architecture (ESA) cluster.
- * The vSAN Default Storage Policy is configured as RAID1.

The administrator is alerted to the fact that storage capacity is running low and, to improve space efficiency, attempts to change the vSAN storage policy on a number of large virtual machines to a 2 Failures - RAID-6 policy.

The policy change is immediately rejected.

What should the administrator do to reduce overall capacity usage while waiting for new storage devices to arrive?

- A. Enable encryption on the vSAN Default Storage Policy.
- **B. Convert the Virtual Machines from thick provisioning to thin provisioning.**
- C. Reconfigure the Virtual Machines to use a 1 Failure-RAID-5 Storage Policy.
- D. Enable compression on the vSAN Default Storage Policy.

Answer: B

Explanation:

In VMware Cloud Foundation 9.0 with vSAN ESA, storage policies must match the capabilities of the existing cluster. The scenario describes a 5-node vSAN ESA cluster where the vSAN Default Storage Policy is RAID-1 (FTT=1). The administrator attempts to apply a RAID-6 policy, which ESA supports only on clusters with at least 7 nodes. Because the cluster has only five nodes, the policy fails immediately- this is expected and documented in the vSAN ESA design specifications.

Since RAID-6 is not an option and capacity is low, the administrator must look for a method to reclaim storage usage without requiring additional nodes or unsupported policy changes. Converting VMs from thick provisioning to thin provisioning is a safe and effective mitigation approach. Thin provisioning reduces consumed space by allowing disks to grow only as needed, immediately recovering unused blocks. This is a standard vSAN-supported method to temporarily alleviate capacity pressure.

Enabling encryption (A) or compression (D) does not reduce capacity usage retroactively and may actually increase overhead. Using RAID-5 (B) is also not possible because RAID-5 requires at least 6 ESA-enabled hosts.

NEW QUESTION # 52

An administrator is attempting to activate a new vSphere Supervisor for use with VMware Cloud Foundation (VCF) Automation on a newly deployed cluster. In the VMware vSphere client, when going through the vSphere Supervisor activation having selected VCF Networking with VPC, the Virtual Private Cloud (VPC) Connectivity Profile dropdown is empty on the workload network page. The administrator verified that a Virtual Private Cloud (VPC) Connectivity Profile exists in NSX.

What is the cause of the issue?

- A. The TO gateway is in active/active mode.
- B. The default VPC has not been created.
- **C. The selected NSX Project is the Default Project.**
- D. The vSphere Supervisor control plane is set to high-availability.

Answer: C

Explanation:

When activating a vSphere Supervisor using VCF Networking with VPC, the Supervisor Workload Network must use a VPC Connectivity Profile. These profiles are scoped to an NSX Project, and cannot be consumed from the Default Project.

VCF Automation requires that:

* A custom NSX Project be used for VPC networking integrations.

* The Default Project cannot host Connectivity Profiles or VPC constructs intended for Supervisor activation.

Even though the administrator verified that a VPC Connectivity Profile exists in NSX, the Supervisor wizard will not display it if:

* The VPC Connectivity Profile belongs to a different project, or

* The current selection is the Default Project, which blocks visibility.

This exact behavior-empty VPC Connectivity Profile dropdown-is documented when attempting Supervisor activation under the Default NSX Project.

Option A (TO active/active) affects North-South routing but does not hide VPC profiles.

Option B (Supervisor HA mode) does not impact network profile selection.

Option D (missing default VPC) is incorrect because the wizard is complaining about availability of Connectivity Profiles, not VPC instances.

NEW QUESTION # 53

.....

Pass4sureCert is regarded as an acclaimed 2V0-15.25 dumps study material provider for certification exams that includes a range of helping materials, programs and pathways to ease your tensions of 2V0-15.25 exam preparation. The prime objective in developing 2V0-15.25 exam dumps is to provide you the unique opportunity of getting the best information in the possibly lesser content. It not only saves your time but also frees you from the hassle of going through tomes of books and other study material. Shorn of unnecessary burden, you better focus what is extremely important to pass exam; hence you increase your chances of success with 2V0-15.25 Exam Questions than other that of candidates.
