While most people would think passing EC-COUNCIL certification 212-89 exam is difficult. However, if you choose FreeCram, you will find gaining EC-COUNCIL certification 212-89 exam certificate is not so difficult. FreeCram training tool is very comprehensive and includes online services and after-sales service. Professional research data is our online service and it contains simulation training examination and practice questions and answers about EC-COUNCIL Certification 212-89 Exam. FreeCram's after-sales service is not only to provide the latest exam practice questions and answers and dynamic news about EC-COUNCIL 212-89 certification, but also constantly updated exam practice questions and answers and binding.

The EC-Council Certified Incident Handler (ECIH v2) certification is designed to equip professionals with the necessary skills to detect, respond, and manage computer security incidents effectively. The ECIH certification is globally recognized as a benchmark for incident handling and response training, and it validates the knowledge and skills required to manage and respond to various types of security incidents, including network security incidents, malware incidents, and insider threats. EC Council Certified Incident Handler (ECIH v3) certification is highly sought after by employers as it demonstrates that the certified professional has the knowledge and skills required to handle and respond to security incidents in a timely and effective manner.

To prepare for the ECIH v2 certification exam, candidates can attend an official EC-Council training course, which covers all the topics included in the exam. 212-89 course provides hands-on experience with incident handling tools and techniques and includes real-world scenarios to help candidates prepare for the exam. Additionally, candidates can use practice exams and study materials to reinforce their understanding of the subject matter.

## Three Formats of FreeCram EC-COUNCIL 212-89 Practice Questions

Most people are nervous and anxious to take part in the 212-89 exam for the first time. Then it is easy for them to make mistakes. So it is important to get familiar with the real test environment. Also, the real test environment of the 212-89 Study Materials can help you control time. After all, you must submit your practice in limited time in 212-89 practice materials. Trust in our 212-89 training guide, and you will get success for sure.

The EC-Council Certified Incident Handler (ECIH) certification exam is designed for individuals who work in the field of incident handling and response. The ECIH certification is a vendor-neutral certification that validates an individual's skills in managing and responding to various types of security incidents. The ECIH certification exam is intended for security professionals who want to validate their skills and knowledge in incident handling and response.

### EC-COUNCIL EC Council Certified Incident Handler (ECIH v3) Sample Questions (Q201-Q206):

#### NEW QUESTION # 201

You are talking to a colleague who is deciding what information they should include in their organization's logs to help with security auditing.

Which of the following items should you tell them to NOT log?

- A. userid
- B. Timestamp
- C. Session ID
- D. Source IP address

**Answer: C**

#### NEW QUESTION # 202

Multiple component incidents consist of a combination of two or more attacks in a system. Which of the following is not a multiple component incident?

- A. An attacker using email with malicious code to infect internal workstation
- B. An attacker redirecting user to a malicious website and infects his system with Trojan
- C. An insider intentionally deleting files from a workstation
- D. An attacker infecting a machine to launch a DDoS attack

**Answer: C**

#### NEW QUESTION # 203

Clark, a professional hacker, exploited the web application of a target organization by tampering the form and parameter values. He successfully exploited the web application and gained access to the information assets of the organization.

Identify the vulnerability in the web application exploited by the attacker.

- A. Broken access control
- B. Security misconfiguration
- C. Sensitive data exposure
- D. SQL injection

**Answer: A**

Explanation:

The vulnerability exploited by Clark through tampering with form and parameter values to gain unauthorized access to information assets is indicative of Broken Access Control. Broken Access Control vulnerabilities occur when a web application does not properly enforce restrictions on what authenticated users are allowed to do. Attackers can exploit these vulnerabilities to access unauthorized functionality or data, such as accessing other users' accounts, viewing sensitive files, and modifying other users' data.

#### NEW QUESTION # 204

An organization implemented an encoding technique to eradicate SQL injection attacks. In this technique, if a user submits a request using single-quote and some values, the encoding technique will convert it into numeric digits and letters ranging from "a" to "t". This prevents the user request from performing a SQL injection attempt on the web application. Identify the encoding technique used by the organization.

- A. URL encoding
- B. Base 64 encoding
- **C. Hex encoding**
- D. Unicode encoding

**Answer: C**

#### NEW QUESTION # 205

After experiencing a large-scale distributed denial-of-service (DDoS) attack that caused service outages, a national telecom provider recovered its web platform. The IH&R team must now implement post-recovery measures to enhance resilience against future DDoS attempts. Which action would be most effective?

- **A. Configure a CDN and implement blackhole routing**
- B. Increase FTP access for easier maintenance
- C. Remove antivirus to speed up application response
- D. Add guest user accounts for remote diagnostics

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation (ECIH-aligned):

This question focuses on post-incident recovery and resilience, a key ECIH concept. After restoring services, organizations must strengthen defenses to prevent recurrence.

Option B is correct because Content Delivery Networks (CDNs) distribute traffic and absorb volumetric attacks, while blackhole routing discards malicious traffic upstream. ECIH identifies these as industry- standard controls for DDoS resilience.

Options A, C, and D weaken security or increase attack surface and contradict ECIH guidance.

ECIH stresses that recovery is not complete until preventive measures are implemented. CDN deployment and upstream traffic control significantly improve availability during future attacks.

#### NEW QUESTION # 206
