350-701 Customized Lab Simulation, Latest 350-701 Test Online

The "Prep4sureExam" is one of the top-rated and reliable platforms that offer real, valid, and updated Implementing and Operating Cisco Security Core Technologies (350-701) exam questions in three different formats. The names of these formats are Prep4sureExam 350-701 PDF dumps file, desktop practice test software, and web-based practice test software. All these three Prep4sureExam 350-701 Exam Questions formats are easy to use and perfectly work with desktop computers, laptops, tabs, or even on your smartphone devices.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q422-Q427):

NEW QUESTION # 422

What is a difference between DMVPN and sVTI?

- A. DMVPN supports static tunnel establishment, whereas sVTI does not.
- **B. DMVPN supports dynamic tunnel establishment, whereas sVTI does not.**
- C. DMVPN supports tunnel encryption, whereas sVTI does not.
- D. DMVPN provides interoperability with other vendors, whereas sVTI does not.

Answer: B

NEW QUESTION # 423

Why is it important to implement MFA inside of an organization?

- A. To prevent phishing attacks from being successful.
- B. To prevent man-the-middle attacks from being successful.
- C. To prevent DoS attacks from being successful.
- D. To prevent brute force attacks from being successful.

Answer: D

NEW QUESTION # 424

Where are individual sites specified to be blacklisted in Cisco Umbrella?

- A. destination lists
- B. content categories
- C. security settings
- D. application settings

Answer: A

Explanation:

Explanation A destination list is a list of internet destinations that can be blocked or allowed based on the administrative preferences for the policies applied to the identities within your organization. A destination is an IP address (IPv4), URL, or fully qualified domain name. You can add a destination list to Umbrella at any time; however, a destination list does not come into use until it is added to a policy. Reference: <https://docs.umbrella.com/deployment-umbrella/docs/working-with-destination-lists> A destination list is a list of internet destinations that can be blocked or allowed based on the administrative preferences for the policies applied to the identities within your organization. NEW QUESTION # 425

Refer to the exhibit.

Which type of authentication is in use?

- A. LDAP authentication for Microsoft Outlook
- B. POP3 authentication
- C. SMTP relay server authentication
- D. external user and relay mail authentication

Answer: D

Explanation:

The TLS connections are recorded in the mail logs, along with other significant actions that are related to messages, such as filter actions, anti-virus and anti-spam verdicts, and delivery attempts. If there is a successful TLS connection, there will be a TLS success entry in the mail logs. Likewise, a failed TLS connection produces a TLS failed entry. If a message does not have an associated TLS entry in the log file, that message was not delivered over a TLS connection. Reference:

<https://www.cisco.com/c/en/us/support/docs/security/email-security-appliance/118844-technoteesa-00.html> The exhibit in this

Q shows a successful TLS connection from the remote host (reception) in the mail log.

messages, such as filter actions, anti-virus and anti-spam verdicts, and delivery attempts. If there is a successful TLS connection, there will be a TLS success entry in the mail logs. Likewise, a failed TLS connection produces a TLS failed entry. If a message does not have an associated TLS entry in the log file, that message was not delivered over a TLS connection.

NEW QUESTION # 426

Under which two circumstances is a CoA issued? (Choose two)

- A. A new Identity Service Engine server is added to the deployment with the Administration persona
- B. A new Identity Source Sequence is created and referenced in the authentication policy.
- C. A new authentication rule was added to the policy on the Policy Service node.
- **D. An endpoint is deleted on the Identity Service Engine server.**
- **E. An endpoint is profiled for the first time.**

Answer: D,E

Explanation:

The profiling service issues the change of authorization in the following cases:

- Endpoint deleted- When an endpoint is deleted from the Endpoints page and the endpoint is disconnected or removed from the network.

An exception action is configured-If you have an exception action configured per profile that leads to an unusual or an unacceptable event from that endpoint. The profiling service moves the endpoint to the corresponding static profile by issuing a CoA.

- An endpoint is profiled for the first time-When an endpoint is not statically assigned and profiled for the first time; for example, the profile changes from an unknown to a known profile.

+ An endpoint identity group has changed- When an endpoint is added or removed from an endpoint identity group that is used by an authorization policy.

The profiling service issues a CoA when there is any change in an endpoint identity group, and the endpoint identity group is used in the authorization policy for the following:

++ The endpoint identity group changes for endpoints when they are dynamically profiled ++ The endpoint identity group changes when the static assignment flag is set to true for a dynamic endpoint - An endpoint profiling policy has changed and the policy is used in an authorization policy- When an endpoint profiling policy changes, and the policy is included in a logical profile that is used in an authorization policy. The endpoint profiling policy may change due to the profiling policy match or when an endpoint is statically assigned to an endpoint profiling policy, which is associated to a logical profile. In both the cases, the profiling service issues a CoA, only when the endpoint profiling policy is used in an authorization policy. Reference:

https://www.cisco.com/c/en/us/td/docs/security/ise/2-1/admin_guide/b_ise_admin_guide_21/b_ise_admin_guide_20_chapter_010100.html

++ The endpoint identity group changes when the static assignment flag is set to true for a dynamic endpoint - An endpoint profiling policy has changed and the policy is used in an authorization policy- When an endpoint profiling policy changes, and the policy is included in a logical profile that is used in an authorization policy. The endpoint profiling policy may change due to the profiling policy match or when an endpoint is statically assigned to an endpoint profiling policy, which is associated to a logical profile. In both the cases, the profiling service issues a CoA, only when the endpoint profiling policy is used in an authorization policy.
