At QuestionsTube, you can read HPE7-A01 free demo questions in pdf file, so you can check the questions and answers before deciding to download the HP HPE7-A01 practice questions. These free demo questions are parts of the HPE7-A01 exam questions. Download and read them carefully, you will find that the HPE7-A01 test questions of QuestionsTube will be your great learning materials online. Share some HPE7-A01 exam online questions below.

1. What is true regarding 802.11k?

P.S. Free 2026 HP HPE7-A01 dumps are available on Google Drive shared by CertkingdomPDF: https://drive.google.com/open?id=1GTJI7Lwe-2o-fp2qbAwR9_L1xNMJP3pt

The price for HPE7-A01 training materials is quite reasonable, and no matter you are a student or you are an employee at school, you can afford it. HPE7-A01 exam dumps are edited by experienced experts, therefore the quality can be guaranteed. HPE7-A01 training materials contain both questions and answers, and it's convenient for you to check the answers after finish practicing. In addition, HPE7-A01 Exam Dumps cover most knowledge points of the exam, and you can also improve your ability in the process of learning.

The HP HPE7-A01 exam consists of 60 multiple-choice questions that cover a range of topics related to wireless networking, including network fundamentals, wireless LAN design, installation and configuration, troubleshooting, and security. HPE7-A01 exam is timed and candidates have 90 minutes to complete it. To pass the exam, candidates must score at least 65%.

Aruba, a Hewlett Packard Enterprise company, is a leading provider of secure wireless access solutions. Aruba's products and solutions are designed for enterprise-level networks, and the HPE7-A01 Certification Exam is a testament to an individual's expertise in Aruba's technologies. HPE7-A01 exam covers topics such as WLAN design and deployment, security, troubleshooting, and network management. The HPE7-A01 certification exam is an excellent way for individuals to demonstrate their skills and knowledge in Aruba's wireless access solutions.

Aruba Certified Campus Access Professional Exam Interactive Testing Engine & HPE7-A01 Latest Training Guide & Aruba Certified Campus Access Professional Exam Self-Paced Training

Free demo for HPE7-A01 exam materials is available, we recommend you to have a try before buying HPE7-A01 exam dumps, so that you can have a deeper understanding of what you are going to buy. HPE7-A01 training materials contain both questions and answers, and you can have a quickly check after practicing. We have a professional team to collect and research the latest information for the exam, and you can receive the latest information for HPE7-A01 Exam Dumps if you choose us. We have online and offline service for HPE7-A01 exam dumps, and the staff possesses the professional knowledge for the exam, if you have any questions, you can consult us.

HPE7-A01 exam covers a broad range of topics, including ArubaOS switches, Aruba Mobility Controllers, and ClearPass Policy Manager. It also tests the candidate's ability to design, deploy, and troubleshoot Aruba wireless and wired network solutions. Aruba Certified Campus Access Professional Exam certification exam is a rigorous test of the candidate's technical knowledge and practical skills in the areas of network infrastructure.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q60-Q65):

NEW QUESTION # 60

A customer is concerned about unprotected traffic between an AOS-CX switch and a gateway, running on AOS10. What is a feasible option to protect this traffic?

- A. Implement an MD5 HMAC function to protect PAPI between the AOS-CX switches and the gateway
- B. no action is needed, an RSA certificate already encrypts the traffic
- C. Implement a GRE tunnel to protect PAPI between the AOS-CX switches and the gateway
- **D. Implement an IPSec tunnel to protect PAPI between the AOS-CX switches and the gateway**

Answer: D

Explanation:

According to the Aruba Documentation Portal, PAPI (Port Aggregation Protocol) is a protocol that allows multiple physical ports to be aggregated into a single logical port for increased bandwidth and performance.

PAPI can be used between AOS-CX switches and gateways, or between AOS-CX switches and other devices.

Option A: Implement an IPSec tunnel to protect PAPI between the AOS-CX switches and the gateway This is because option A shows how to implement an IPSec tunnel between two devices using the interface command and the ipsec command. An IPSec tunnel can provide encryption and authentication for PAPI traffic between two devices, such as an AOS-CX switch and a gateway. Therefore, option A is a feasible option to protect this traffic.

I hope this helps you. If you need more information, please let me know.

NEW QUESTION # 61

The administrator notices that wired guest users that have exceeded their bandwidth limit are not being disconnected. Access Tracker in ClearPass indicates a disconnect CoA message is being sent to the AOS-CX switch.

An administrator has performed the following configuration

```
Access1(config)# ip dns host oppm.arubatraining.com 10.254.1.23 vrf mgmt
Access1(config)# radius-server host oppm.arubatraining.com key plaintext aruba123 vrf mgmt
Access1(config)# aaa group server radius oppm
Access1(config-sg)# server oppm.arubatraining.com vrf mgmt
Access1(config-sg)# exit
Access1(config)# aaa accounting port-access start-stop interim 5 group oppm
Access1(config)# radius dyn-authorization client oppm.arubatraining.com secret-key plaintext aruba123 vrf mgmt
Access1(config)# radius dyn-authorization enable
```

What is the most likely cause of this issue?

- A. The SSL certificate for CPPM has not been added as a trust point on the switch

- B. Change of Authorization has not been globally enabled on the switch
- C. There is a mismatch between the RADIUS secret on the switch and CPPM.
- D. There is a time difference between the switch and the ClearPass Policy Manager

Answer: D

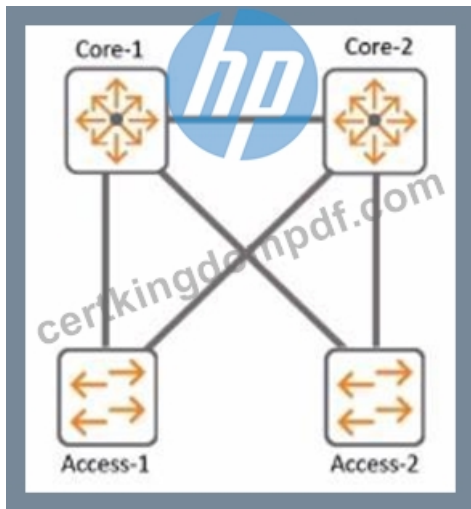

Explanation:

Change of Authorization (CoA) is a feature that allows ClearPass Policy Manager (CPPM) to send messages to network devices such as switches to change the authorization state of a user session. CoA requires that both CPPM and the network device support this feature and have it enabled. For AOS-CX switches, CoA must be globally enabled using the command `radius-server coa enable`. If CoA is not enabled on the switch, the disconnect CoA message from CPPM will be ignored and the user session will not be terminated. References:

https://www.arubanetworks.com/techdocs/ClearPass/6.7/PolicyManager/index.htm#CPPM_UserGuide/Admin/C

NEW QUESTION # 62

Refer to the exhibit. In the Core-2 configuration of spanning-tree instance 2 priority 0, what needs to be configured to enable the root for VLAN 20 while VLAN 10 remains root on Core-1?

- A. Spanning-tree priority 0 VLAN 20
- B. Spanning-tree instance 2 VLAN 20
- C. Spanning-tree priority root VLAN 20
- D. Spanning-tree VLAN 20

Answer: B

NEW QUESTION # 63

A network administrator is attempting to troubleshoot a connectivity issue between a group of users and a particular server. The administrator needs to examine the packets over a period of time from their desktop; however, the administrator is not directly connected to the AOS-CX switch involved with the traffic flow.

What statements are correct regarding the ERSPAN session that needs to be established on an AOS-CX switch? (Select two)

- A. On the source AOS-CX switch, the destination specified is the administrator's desktop
- B. The encapsulation protocol used is GRE.
- C. The encapsulation protocol used is VXLAN.
- D. On the source AOS-CX switch, the destination specified is the switch to which the administrator's desktop is connected
- E. The encapsulation protocol is UDP.

Answer: A,B

Explanation:

These are the correct statements regarding the ERSPAN session that needs to be established on an AOS-CX switch for a network administrator to examine the packets over a period of time from their desktop. ERSPAN (Encapsulated Remote Switched Port Analyzer) is a feature that allows an AOS-CX switch to mirror traffic from one or more source ports or VLANs to a remote

destination IP address over a GRE (Generic Routing Encapsulation) tunnel. The destination IP address must be the IP address of the administrator's desktop, which must have a packet capture tool installed to receive and analyze the mirrored traffic. The encapsulation protocol used for ERSPAN is GRE, which adds a header to the mirrored packets with information such as source and destination IP addresses, session ID, etc.

The other statements are incorrect because they either do not specify the correct destination IP address or do not use ERSPAN or GRE.

NEW QUESTION # 64

What steps are part of the Key Management workflow when a wireless device is roaming from AP1 to AP2?
(Select two.)

- **A. The Key Management service receives a list of all AP1's neighbors from AirMatch.**
- B. A client associates and authenticates with the AP2 after roaming from AP1
- C. The Key Management service then generates R1 keys for AP2's neighbors.
- **D. AP1 will cache the client's information and send it to the Key Management service**
- E. The Key Management service receives from AirMatch a list of all AP2's neighbors

Answer: A,D
