## F5 BIG-IP LTM Specialist: Architect Set-Up & Deploy Sample Questions (Q18-Q23):

### NEW QUESTION # 18

An LTM device provides load balancing to a web application? The LTM device has two dual-core processors and a licensed SSL Transactions Per Second (TPS) limit of 500 CMP is enabled.

TLS connections are used between client systems and virtual servers on the LTM device, as well as from the LTM device to servers used as part of LTM pool.

TLS enabled virtual servers utilize certificates based on 2048-bit keys During a peak period. 2560 new TLS transactions per second are attempted to the web application via the LTM device.

What will happen in this scenario?

- A. 2060 new TLS transactions will be silently discarded due to the SSL TPS license limit
- B. Nothing: 2560 TLS transactions per second is within the SSI TPS license limit.
- C. 560 new TLS transactions will be silently discarded due to the SSL TPS license limit

- D. Nothing: TLS transactions per second are NOT affected by an SSL TPS license limit

**Answer: C**

#### NEW QUESTION # 19

An LTM Specialist needs to create two virtual servers.

The application has links for both HTTP and HTTPS version of application. The client must be persistence to a pool member, no matter which virtual server is accessed.

What must be selected in the Source Address Affinity persistence profile?

- A. Match across Polls
- B. Match across Services
- **C. Match across Virtual Servers**
- D. Match across Pool Members

**Answer: C**

#### NEW QUESTION # 20

An LTM device receives a response string containing "error"

Which monitor type and parameter will mark the HTTP server as down?

- **A. HTTP monitor, Receive String "error", and set the Reverse option to Yes**
- B. HTTP monitor and Receive String "error" ... flag is up
- C. HTTP monitor. Receive String "down", and set the Reverse option to Yes .... flag is
- D. HTTP monitor and Receive Disable String "error" .... flag is disable

**Answer: A**

#### NEW QUESTION # 21

An application is being load balanced through the LTM device using the configuration displayed below.

The network has been re-engineered to NAT all client connection. As a result, all client connections are hitting the same pool member.

Which changes should the LTM Specialist make in order to restore load balancing functionality while maintaining session persistence?

- A. Change the virtual server type to Standard, add an http profile, and change the persistence profile to Destination Address
- **B. Change the virtual server to Standard add an http profile, and change the persistence profile to Cookie persistence**
- C. Leave the virtual server type set Performance (Layer 4) and change the persistence type to hash
- D. Change the virtual server type to Forwarding (Layer 4) and leave the persistence type to hash source Address

**Answer: B**

#### NEW QUESTION # 22

An LTM Specialist creates an Analytics wide to show the type of browsers used to access a certain application. However, the generated statistics only sum up all transaction for that application under one item called "Aggregated." What should the LTM Specialist do to resolve this problem?

- A. Verify that the Analytics profile is assigned to the applications virtual server.
- **B. Make sure "User Agent" is selected in the Analytics profile.**
- C. Drill down into the stats to show the User Agents correlated in the Aggregated group.
- D. Make sure "User Sessions" is selected in the Analytics profile

**Answer: B**
