

Free PDF Quiz Microsoft - DP-100 - Designing and Implementing a Data Science Solution on Azure—High-quality New Cram Materials

2026 Latest Prep4away DP-100 PDF Dumps and DP-100 Exam Engine Free Share: https://drive.google.com/open?id=1QFhot-cpf2FJVtJI7EKig37G_cyHcMd3

If you still have questions with passing the exam, choose us, and we will help you pass the exam successfully. Our DP-100 training materials contain the both the questions and answers. You can have a practice through different versions. If you prefer to practice on paper, then DP-100 Pdf Version will satisfy you. If you want to have a good command of the DP-100 exam dumps, you can buy all three versions, which can assist you for practice.

There are a lot of experts and professors in our company. All DP-100 study torrent of our company are designed by these excellent experts and professors in different area. We can make sure that our Microsoft DP-100 test torrent has a higher quality than other study materials. The aim of our design is to improving your learning and helping you gains your Designing and Implementing a Data Science Solution on Azure DP-100 Certification in the shortest time. If you long to gain the certification, our Designing and Implementing a Data Science Solution on Azure guide torrent will be your best choice.

Microsoft DP-100 Exam Dumps - Pass Your Exam In First Attempt [2026]

As we all know, no pain, no gain. If you want to enter a better company, you must have the competitive force. DP-100 learning materials will offer you such opportunity to pass the exam and get the certificate successfully, so that you can improve your competitive force. Also, you need to spend certain time on practicing the DP-100 Exam Dumps, so that you can get the certificate at last. Besides, we pass guarantee and money back guarantee if you fail to pass the exam after buying DP-100 learning materials. We

also offer you free update for one year, and the update version will be sent to your email automatically.

Microsoft Designing and Implementing a Data Science Solution on Azure Sample Questions (Q35-Q40):

NEW QUESTION # 35

You create an Azure Machine Learning workspace.

You need to use the shared file system of the workspace to store a clone of a private Git repository.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation

NEW QUESTION # 36

You create an Azure Machine Learning workspace and a new Azure DevOps organization. You register a model in the workspace and deploy the model to the target environment.

All new versions of the model registered in the workspace must automatically be deployed to the target environment.

You need to configure Azure Pipelines to deploy the model.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation

Graphical user interface, text, application, email Description automatically generated

Step 1: Create an Azure DevOps project

Step 2: Create a release pipeline

Sign in to your Azure DevOps organization and navigate to your project.

Go to Pipelines, and then select New pipeline.

Step 3: Install the Machine Learning extension for Azure Pipelines

You must install and configure the Azure CLI and ML extension.

Step 4: Create a service connection

How to set up your service connection

Graphical user interface, text, application, email Description automatically generated

Select AzureMLWorkspace for the scope level, then fill in the following subsequent parameters.

Graphical user interface, text, application Description automatically generated

Note: How to enable model triggering in a release pipeline

Go to your release pipeline and add a new artifact. Click on AzureML Model artifact then select the appropriate AzureML service connection and select from the available models in your workspace.

Enable the deployment trigger on your model artifact as shown here. Every time a new version of that model is registered, a release pipeline will be triggered.

NEW QUESTION # 37

You are tuning a hyperparameter for an algorithm. The following table shows a data set with different hyperparameter, training error, and validation errors.

Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic.

Answer:

Explanation:

□ Explanation

□ Box 1: 4

Choose the one which has lower training and validation error and also the closest match.

Minimize variance (difference between validation error and train error).

□ Box 2: 5

Minimize variance (difference between validation error and train error).

NEW QUESTION # 38

You manage an Azure Machine Learning workspace.

You plan to train a natural language processing (NLP) model that will assign labels 'or designated tokens in unstructured text You need to configure the NLP task by using automated machine learning.

Which configuration values should you use? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

□

Answer:

Explanation:

□ Explanation:

□

NEW QUESTION # 39

You are building an experiment using the Azure Machine Learning designer.

You split a dataset into training and testing sets. You select the Two-Class Boosted Decision Tree as the algorithm.

You need to determine the Area Under the Curve (AUC) of the model.

Which three modules should you use in sequence? To answer, move the appropriate modules from the list of modules to the answer area and arrange them in the correct order.

□

Answer:

Explanation:

□ Explanation:

Step 1: Train Model

Two-Class Boosted Decision Tree

First, set up the boosted decision tree model.

1. Find the Two-Class Boosted Decision Tree module in the module palette and drag it onto the canvas.

2. Find the Train Model module, drag it onto the canvas, and then connect the output of the Two-Class Boosted Decision Tree module to the left input port of the Train Model module.

The Two-Class Boosted Decision Tree module initializes the generic model, and Train Model uses training data to train the model.

3. Connect the left output of the left Execute R Script module to the right input port of the Train Model module (in this tutorial you used the data coming from the left side of the Split Data module for training).

This portion of the experiment now looks something like this:

□

Step 2: Score Model

Score and evaluate the models

You use the testing data that was separated out by the Split Data module to score our trained models. You can then compare the results of the two models to see which generated better results.

Add the Score Model modules

1. Find the Score Model module and drag it onto the canvas.

2. Connect the Train Model module that's connected to the Two-Class Boosted Decision Tree module to the left input port of the Score Model module.

3. Connect the right Execute R Script module (our testing data) to the right input port of the Score Model module.

□

Step 3: Evaluate Model

To evaluate the two scoring results and compare them, you use an Evaluate Model module.

1. Find the Evaluate Model module and drag it onto the canvas.

2. Connect the output port of the Score Model module associated with the boosted decision tree model to the left input port of the Evaluate Model module.

3. Connect the other Score Model module to the right input port.

NEW QUESTION # 40

.....

Our DP-100 exam braindumps are set high standards for your experience. That is the reason why our DP-100 training questions gain well brand recognition and get attached with customers all these years around the world. Besides, our DP-100 learning questions are not only high effective but priced reasonably. Their prices are acceptable for everyone and help you qualify yourself as and benefit your whole life.
