## Reliable ARA-C01 Test Objectives & Reliable ARA-C01 Exam Price

Choosing valid Snowflake dumps means closer to success. Before you buy our products, you can download the free demo of ARA-C01 test questions to check the accuracy of our dumps. Besides, there are 24/7 customer assisting to support you in case you may have any questions about ARA-C01 Dumps PDF or download link.

## Snowflake SnowPro Advanced Architect Certification Sample Questions (Q35-Q40):

### NEW QUESTION # 35

A user has the appropriate privilege to see unmasked data in a column.

If the user loads this column data into another column that does not have a masking policy, what will occur?

- **A. Unmasked data will be loaded in the new column.**
- B. Masked data will be loaded into the new column.
- C. Unmasked data will be loaded into the new column and no users will be able to see the unmasked data.
- D. Unmasked data will be loaded into the new column but only users with the appropriate privileges will be able to see the unmasked data.

**Answer: A**

Explanation:

According to the SnowPro Advanced: Architect documents and learning resources, column masking policies are applied at query time based on the privileges of the user who runs the query. Therefore, if a user has the privilege to see unmasked data in a column, they will see the original data when they query that column. If they load this column data into another column that does not have a masking policy, the unmasked data will be loaded in the new column, and any user who can query the new column will see the unmasked data as well.

The masking policy does not affect the underlying data in the column, only the query results.

Snowflake Documentation: Column Masking

Snowflake Learning: Column Masking

### NEW QUESTION # 36

You will be using a multi cluster warehouse. You will statically control the available resources (i.e. servers) and you have large numbers of concurrent user sessions and/or queries and the numbers do not fluctuate significantly.

Which mode will you use for the warehouse?

- A. Auto-Scale
- B. Minimized
- **C. Maximized**

**Answer: C**

### NEW QUESTION # 37

Which of the below approach results in performance improvement through linear scaling of data ingestion workload?

- A. Organize data by granular path
- B. Resize virtual warehouse
- **C. All of the above**
- D. Split large files into recommended range of 10 MB to 100 MB

**Answer: C**

### NEW QUESTION # 38

What transformations are supported in the below SQL statement? (Select THREE).

CREATE PIPE ... AS COPY ... FROM (...)

- A. Type casts are supported.
- **B. Data can be filtered by an optional where clause.**
- **C. Columns can be omitted.**
- **D. Columns can be reordered.**
- E. Incoming data can be joined with other tables.
- F. The ON ERROR - ABORT statement command can be used.

**Answer: B,C,D**

Explanation:

The SQL statement is a command for creating a pipe in Snowflake, which is an object that defines the COPY INTO <table> statement used by Snowpipe to load data from an ingestion queue into tables1. The statement uses a subquery in the FROM clause to transform the data from the staged files before loading it into the table2.

The transformations supported in the subquery are as follows<sup>2</sup>:

Data can be filtered by an optional WHERE clause, which specifies a condition that must be satisfied by the rows returned by the subquery. For example:

SQLAI-generated code. Review and use carefully. More info on FAQ.

```
create pipe mypipe as
copy into mytable
from (
  select * from @mystage
  where col1 = 'A' and col2 > 10
);
```

Columns can be reordered, which means changing the order of the columns in the subquery to match the order of the columns in the target table. For example:

SQLAI-generated code. Review and use carefully. More info on FAQ.

```
create pipe mypipe as
copy into mytable (col1, col2, col3)
from (
  select col3, col1, col2 from @mystage
);
```

Columns can be omitted, which means excluding some columns from the subquery that are not needed in the target table. For example:

SQLAI-generated code. Review and use carefully. More info on FAQ.

```
create pipe mypipe as
copy into mytable (col1, col2)
from (
  select col1, col2 from @mystage
);
```

The other options are not supported in the subquery because<sup>2</sup>:

Type casts are not supported, which means changing the data type of a column in the subquery. For example, the following statement will cause an error:

SQLAI-generated code. Review and use carefully. More info on FAQ.

```
create pipe mypipe as
copy into mytable (col1, col2)
from (
  select col1::date, col2 from @mystage
);
```

Incoming data can not be joined with other tables, which means combining the data from the staged files with the data from another table in the subquery. For example, the following statement will cause an error:

SQLAI-generated code. Review and use carefully. More info on FAQ.

```
create pipe mypipe as
copy into mytable (col1, col2, col3)
from (
  select s.col1, s.col2, t.col3 from @mystage s
  join othertable t on s.col1 = t.col1
);
```

The ON ERROR - ABORT statement command can not be used, which means aborting the entire load operation if any error occurs. This command can only be used in the COPY INTO <table> statement, not in the subquery. For example, the following statement will cause an error:

SQLAI-generated code. Review and use carefully. More info on FAQ.

```
create pipe mypipe as
copy into mytable
from (
  select * from @mystage
  on error abort
);
```

2: Transforming Data During a Load | Snowflake Documentation

At which object type level can the APPLY MASKING POLICY, APPLY ROW ACCESS POLICY and APPLY SESSION POLICY privileges be granted?

- A. Schema
- B. Table
- **C. Global**
- D. Database

**Answer: C**

Explanation:

The object type level at which the APPLY MASKING POLICY, APPLY ROW ACCESS POLICY and APPLY SESSION POLICY privileges can be granted is global. These are account-level privileges that control who can apply or unset these policies on objects such as columns, tables, views, accounts, or users.

These privileges are granted to the ACCOUNTADMIN role by default, and can be granted to other roles as needed. The other options are incorrect because they are not the object type level at which these privileges can be granted. Database, schema, and table are lower-level object types that do not support these privileges. References: Access Control Privileges | Snowflake Documentation, Using Dynamic Data Masking

| Snowflake Documentation, Using Row Access Policies | Snowflake Documentation, Using Session Policies | Snowflake Documentation

## NEW QUESTION # 40

.....

As the saying goes, opportunities for those who are prepared. If you have made up your mind to get respect and power, the first step you need to do is to get the ARA-C01 certification, because the certification is a reflection of your ability. If you have the ARA-C01 Certification, it will be easier for you to get respect and power. Our company happened to be designing the ARA-C01 exam question.
