最新的 Analytics Engineers dbt-Analytics-Engineering 免費考試真題 (Q110-Q115):

問題 #110

You need a materialization that automatically adapts to upstream schema changes while still preserving query performance. Which dbt materialization offers this kind of flexibility?

- A. Snapshot
- **B. View**
- C. Incremental
- D. Ephemeral

答案：B

解題說明：

Views are dynamically built at query time, inheriting their schema from the underlying sources, thus providing built-in adaptation.

問題 #111

You want to automatically deploy updates to your documentation site hosted on a cloud service whenever changes to your dbt project are committed to your main branch. Which of the following is essential for this setup?

- A. Write a custom script to check for project changes and handle deployment.
- B. Implementing a CI/CD pipeline that includes dbt build steps.
- C. Enabling webhooks in your Git repository provider.
- D. Configuring dbt Cloud to trigger documentation deploys.

答案： A,B,C

解題說明：

A). A CI/CD pipeline is needed to automate running dbt commands and the deployment process. B: Webhooks allow your CI/CD system to get notified when changes are pushed to your repository, triggering the pipeline. D: A custom script could provide flexibility for check conditions and deployment logic-

問題 #112

You need to regularly run performance tests to benchmark a time-sensitive incremental model. These tests involve more complex setup than standard dbt tests. How could you efficiently integrate them into your workflow?

- A. Define the performance tests as their own dbt project, triggered separately-
- B. Write the tests as generic tests and use dbt's built-in warning thresholds.
- C. Create a dbt operation (macro) to encapsulate the test logic and invoke it as needed.
- D. Convert them into dbt seeds to easily execute them alongside model runs-

答案： A,C

解題說明：

A provides separation and specialized configuration if needed. C offers reusability and the ability to run from within a dbt workflow. B (seeds) isn't suitable for complex testing logic. D (generic tests) lack the power required for performance benchmarking.

問題 #113

After configuring a dbt package, you notice its models depend on a source table absent from your warehouse. How do you typically address this?

- A. Update your source definitions to include the required table.
- B. File an issue or submit a pull request to the package's repository.
- C. Rewrite the package's model from scratch within your project to remove the dependency.
- D. Override the package model's SQL query to reference an existing table in your warehouse.

答案： D

解題說明：

Start by fulfilling the package's dependencies. If the table is truly generic, then customizing the SQL (B) might be the next step.

問題 #114

A non-technical user needs to access a specific table generated by your dbt project. Which of the following is the LEAST suitable option?

- A. Grant them access to the output from dbt docs generate.
- B. Share query results as a CSV file.
- C. Set up a read-only connection to the database and guide them with SQL queries.
- D. Create a dashboard in a BI tool connected to your data warehouse.

答案： C

解題說明：

Providing direct database access to non-technical users carries risks. Options A, C, and D provide information without exposing the user to unnecessary complexity.

問題 #115
