

CSC2 Online Test & CSC2 Reliable Study Plan

Client 1	The client is in their prime earning years. They are looking to add risk in their portfolio and is comfortable with investments with prolonged lockup periods. Tax benefits in the form of federal tax credits would certainly be a plus.
Client 2	The client is in their early earning years. While there's an appetite for more risk, the client cares a great deal about liquidity.
Client 3	The client is seeking investments that can provide offsetting tax credits for their income. The client is generally willing to take on risk and is willing to tolerate lower liquidity. The client is insistent that the tax credits can be carried forward.
Client 4	The client has a fairly stable income, but has indicated a willingness to add risk to their portfolio. While tolerant of lower liquidity, the client is particularly sensitive to high fees.

What is more, CSC2 Study Materials can fuel your speed and the professional backup can relieve you of stress of the challenge. So their profession makes our CSC2 preparation engine trustworthy.

CSI Canadian Securities Course Exam2 Sample Questions (Q148-Q153):

NEW QUESTION # 148

What actions can a government take to lower a \$40 billion national deficit?

- A. Decrease taxation
- B. Increase government spending.
- C. Increase interest rates.
- **D. Increase taxation**

Answer: D

Explanation:

To reduce a national deficit, governments can increase taxation to generate more revenue. This measure, combined with controlled spending, helps reduce the shortfall between revenues and expenditures.

* B. Increase government spending: This would increase the deficit further unless matched by revenue increases.

* C. Decrease taxation: This would reduce revenue and worsen the deficit.

* D. Increase interest rates: This impacts monetary policy and borrowing costs but does not directly reduce a fiscal deficit.

Reference:CSC Volume 1, Chapter 5, "Fiscal Policy - Addressing Budget Deficits" discusses how governments use taxation to manage deficits.

NEW QUESTION # 149

What is the likely outcome at the end of a five-year term of a rate-reset preferred share if the issuer does not redeem the shares?

- A. The shareholder exchanges the rate-reset preferred share for a floating-rate preferred share
- B. The shareholder exchanges the rate-reset preferred share for an unsecured bond
- C. The shareholder exchanges the rate-reset preferred share for a specified number of common shares.
- D. The shareholder exchanges the rate-reset preferred share for a fixed-rate preferred share.

Answer: A

Explanation:

At the end of the five-year term, if the issuer does not redeem the rate-reset preferred shares, the shareholder can choose to:

- * Continue holding the shares at the reset fixed rate.
- * Convert them into floating-rate preferred shares with rates tied to a benchmark (e.g., prime or LIBOR).

This conversion offers flexibility to the shareholder based on market conditions.

- * A. Exchange for a specified number of common shares: Rate-reset preferred shares do not have this feature.
- * B. Exchange for a fixed-rate preferred share: The fixed-rate component is reset, not exchanged.
- * C. Exchange for an unsecured bond: This is not a feature of rate-reset preferred shares.

NEW QUESTION # 150

What is one type of linked PPN in Canada?

- A. Participation
- B. Stock basket
- C. Performance
- D. Zero-coupon plus option

Answer: D

NEW QUESTION # 151

Which is a typical feature of investing in a listed private equity company?

- A. Controls and limits on private equity management to protect existing investors.
- B. Average levels of liquidity.
- C. Access to a wide range of skills and large number of personnel.
- D. Ability to act on legitimate insider information.

Answer: C

Explanation:

Investing in a listed private equity company offers the benefit of access to a broad array of skills and a large talent pool. Unlike traditional private equity investments, these entities are publicly traded and often operate with extensive resources and expertise to evaluate and manage investment opportunities.

* Key Features of Listed Private Equity Companies

* They provide liquidity compared to traditional private equity, as shares can be traded on public exchanges.

* They leverage a diverse team of analysts, strategists, and operational experts to identify and optimize investment opportunities.

* Evaluating Other Options:

* Average levels of liquidity (A): Listed private equity companies are considered to have higher liquidity relative to traditional private equity funds.

* Controls and Limits (C): These companies may not necessarily impose stricter controls than traditional private equity.

* Ability to act on legitimate insider information (D): Insider trading is strictly regulated and prohibited by law.

* Risk and Return Trade-Off: While providing advantages like transparency and liquidity, listed private equity investments may be subject to market volatility akin to other publicly traded equities.

References: Volume 2, Chapter 22: Alternative Investments - Section on Listed Private Equity.

Volume 2, Chapter 20: Investment Structures and Risks - Private Equity Analysis.

NEW QUESTION # 152

Which macroeconomic factors would have a positive impact on investor expectations and the price of securities?

- **A. Low levels of government debt and consumer indebtedness.**
- B. A decrease in government spending with corresponding tax cuts to individuals.
- C. Increased taxes on corporations with the goal of lower government debt.
- D. Targeting certain sectors of the economy with monetary policy measures and tax breaks.

Answer: A

Explanation:

Low levels of government and consumer indebtedness create a positive macroeconomic environment for investor expectations and securities prices. When debt levels are manageable, governments and consumers have greater financial flexibility, which can lead to increased economic activity and improved investor confidence.

* Why This Impacts Investor Expectations Positively:

* Low government debt allows for expansionary fiscal policies (e.g., increased spending or tax cuts) without significantly increasing borrowing costs.

* Low consumer debt supports higher disposable income, enabling more spending and investment.

* Both factors reduce the risk of higher interest rates, keeping borrowing costs low for businesses and individuals, which supports economic growth and, in turn, securities prices.

* Why Other Options Are Incorrect:

* A: Targeted monetary policies may benefit specific sectors but are not a universally positive factor for all securities.

* B: Increased taxes on corporations can reduce profitability and negatively impact investor expectations.

* D: A decrease in government spending with tax cuts could slow economic growth, negatively impacting securities prices.
