Oracle 1z0-076 Test Prep | Vce 1z0-076 Files

Our 1z0-076 test braindumps are carefully developed by experts in various fields, and the quality is trustworthy. What's more, after you purchase our products, we will update our 1z0-076 exam questions according to the new changes and then send them to you in time to ensure the comprehensiveness of learning materials. We also have data to prove that 99% of those who use our 1z0-076 Latest Exam torrent to prepare for the exam can successfully pass the exam and get 1z0-076 certification. As long as you decide to choose our 1z0-076 exam questions, you will have an opportunity to prove your abilities, so you can own more opportunities to embrace a better life.

If you really want to pass the 1z0-076 exam faster, choosing a professional product is very important. Our 1z0-076 study materials can be very confident that we are the most professional in the industry's products. We are constantly improving and just want to give you the best 1z0-076 learning braindumps. And we have engaged for years to become a trustable study flatform for helping you pass the 1z0-076 exam.

>> Oracle 1z0-076 Test Prep <<

Vce 1z0-076 Files | 1z0-076 Relevant Exam Dumps

You can set time to test your study efficiency, so that you can accomplish your test within the given time when you are in the real 1z0-076 exam. Moreover, you can adjust yourself to the exam speed and stay alert according to the time-keeper that we set on our 1z0-076 training materials. Therefore, you can trust on our 1z0-076 Study Guide for this effective simulation function will eventually improve your efficiency and assist you to succeed in the 1z0-076 exam. Just have a try on our free demo of 1z0-076 exam questions!

Oracle Database 19c: Data Guard Administration Sample Questions (Q89-Q94):

NEW QUESTION # 89

Examine this list of possible steps:

1. Raise the compatibility level on both databases.
2. Restart SQL Apply on the upgraded logical standby database.
3. Start SQL Apply on the old primary database.
4. Perform a Switchover to the logical standby database.
5. Upgrade the logical standby database.
6. Upgrade the old primary database.

Which is the minimum number of steps in the correct order, to perform a rolling release upgrade of a data guard environment using an existing logical standby database and to enable the new functionality?

- A. 4,6,5,2,3,1
- B. 5,2,4,6,3,1
- C. 5,2,4,1
- D. 1,5,2,4,6,3
- E. 5,2,4,3,6,1

Answer: D

Explanation:

The process of performing a rolling release upgrade in a Data Guard environment using a logical standby database generally involves these steps:

Raise the compatibility level on both databases (1): Ensuring both the primary and logical standby databases are operating with the same and correct compatibility level is essential before starting the upgrade process.

Upgrade the logical standby database (5): Apply the database upgrade to the logical standby first, which allows the primary database to continue serving the workload without interruption.

Restart SQL Apply on the upgraded logical standby database (2): Once the logical standby has been upgraded, SQL Apply must be restarted to apply the redo data from the primary database, which is still running the earlier version.

Perform a switchover to the logical standby database (4): After confirming that the logical standby database is successfully applying redo data, perform a switchover to make it the new primary database.

Upgrade the old primary database (6): With the new primary database now in place, upgrade the old primary database (which is now the new standby) to the new Oracle Database release.

Start SQL Apply on the old primary database (3): Finally, start SQL Apply on what is now the standby database to synchronize it with the new primary database.

NEW QUESTION # 90

Which three are true about using Flashback database through role transitions in a Data Guard environment?

- A. Logical standby databases retain their current role when you flash back through to a point in time before the switchover occurred which caused this database to become a logical standby.
- B. Physical standby databases retain their current role when you flash back to a point in time before a reinstate occurred which caused this database to become a physical standby.
- C. Physical standby databases retain their current role when you flash back to a point in time before the switchover occurred which caused this database to become a physical standby.
- D. Logical standby database roles are reverted to their original role when you flash back to a point in time before the switchover occurred which caused this database to become a logical standby.
- E. Flashback database may not be used to undo a physical standby database activation.

Answer: B,C,E

NEW QUESTION # 91

Which two are true about database roles in an Oracle Data Guard configuration?

- A. A Physical Standby Database can be converted into a Logical Standby Database.
- B. A Snapshot Standby Database can be a fast-start failover target.
- C. A Logical Standby Database can cascade redo to a terminal destination.

- D. A Logical Standby Database can be converted to a Snapshot Standby Database.
- E. A configuration consisting only of a primary and one or more physical standby databases can support a rolling release upgrade.

Answer: A,E

Explanation:
A Physical Standby Database can indeed be converted into a Logical Standby Database, providing flexibility in a Data Guard configuration. This allows for the database to switch roles and supports SQL apply operations, enabling more granular control over the data and transactions being replicated and applied. Additionally, having a configuration with a primary database and one or more physical standby databases allows for rolling upgrades to be performed. This means that each database in the Data Guard configuration can be upgraded in a phased manner, minimizing downtime and ensuring high availability during the upgrade process.

NEW QUESTION # 92
Which TWO statements are true about configuring Oracle Net Service in a Data Guard environment?

- A. A static service must be registered with the local listener to enable DGMGRL to restart instances during the course of broker operations.
- B. Installing the oracle-database-preinstall-19c package is NOT sufficient to set up operating system kernel parameters for Oracle Net.
- C. It is necessary to use the failover clause for an address_list with multiple address lists in the tnsnames.ora file.
- D. Enterprise Manager does not require static service registration to restart instances during the course of broker operations.
- E. Install the oracle-database-preinstall-19c package to set the kernel parameters for Oracle Net based on the Data Guard best practice guidelines.

Answer: A,B

Explanation:
A static service must be registered with the local listener to enable DGMGRL to restart instances during the course of broker operations (A): For DGMGRL (Data Guard Manager Command-Line Interface) to perform instance management operations, such as restarting instances, a static service registration in the listener is required. This allows the broker to connect to the database instance even when the instance is not fully up and the dynamic service registration is not available.
Installing the oracle-database-preinstall-19c package is NOT sufficient to set up operating system kernel parameters for Oracle Net (C): While the oracle-database-preinstall-19c package automates the setting of several kernel parameters to meet the preinstallation requirements for Oracle Database, it does not specifically tailor all settings for Oracle Net in a Data Guard configuration. Additional manual configuration may be required to optimize Oracle Net services for Data Guard operations.

Oracle Net Services Administrator's Guide

NEW QUESTION # 93
Your Data Guard configuration consists of these components and settings:
1. A primary database
2. A remote physical standby database
3. Real-time query is enabled
4. Redo transport mode is synchronous
5. Protection mode is maximum availability
6. The Data Guard broker is used
You notice that the standby destination fails to acknowledge reception of redo within net_timeout period of time.
Which is true in this scenario?

- A. Real-time query will be disabled on the physical standby.
- B. The protection mode will automatically change to Maximum Performance.
- C. Synchronous redo transport mode connections to the standby database are terminated.
- D. The physical standby database instance is shut down by the Data Guard broker.

Answer: C

Explanation:

In a Data Guard configuration where the protection mode is set to Maximum Availability and synchronous redo transport is enabled, if the standby destination fails to acknowledge the reception of redo within the net_timeout period, the primary database will terminate the synchronous redo transport mode connections to the standby database to protect the primary database from hanging (C). The primary database then operates in a Maximum Performance mode until the issue is resolved. This behavior ensures that the primary database can continue to process transactions even when the standby database is temporarily unavailable.
References:The Oracle Data Guard Broker documentation and Oracle Data Guard Concepts and Administration guide detail the behavior of different protection modes and the response to network timeouts, including the fallback to asynchronous redo transport to maintain primary database availability.

NEW QUESTION # 94

......

We all known that most candidates will worry about the quality of our product, In order to guarantee quality of our study materials, all workers of our company are working together, just for a common goal, to produce a high-quality product; it is our 1z0-076 exam questions. If you purchase our 1z0-076 Guide Torrent, we can guarantee that we will provide you with quality products, reasonable price and professional after sales service. I think our 1z0-076 test torrent will be a better choice for you than other study materials.
