## C\_ACDET\_2506 Latest Practice Questions - Latest C\_ACDET\_2506 Test Objectives

Real4dumps SAP C\_ACDET\_2506 exam braindump has a high hit rate which is 100%. It can guarantee all candidates using our dumps will pass the exam. Of course, it is not indicate that you will succeed without any efforts. What you need to do, you must study all the questions in our Real4dumps dumps. Only in this way can you easily deal with the examination. How about it feels? When you prepare the exam, Real4dumps can help you save a lot of time. It is your guarantee to pass C\_ACDET\_2506 Certification. Do you want to have the dumps? Hurry up to visit Real4dumps to purchase C\_ACDET\_2506 exam materials. In addition, before you buy it, you can download the free demo which will help you to know more details.

## SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q30-Q35):

### NEW QUESTION # 30

A customer requests a dynamic list from CSV.  
Which field type supports that?

- A. Computed Field
- B. Single-Select Enum
- C. Hyperlink
- **D. Flex Master Data-based field**

**Answer: D**

### NEW QUESTION # 31

The customer wants to have a field to hold Contract Storage Locations and the address. Those locations are loaded from an external system, and the user should be able to search for storage locations. What should be used to hold the valid storage locations?

- A. Create a new field of type Date, where each date entry is tied to a unique Storage Location and its corresponding address, allowing users to select locations based on historical data entries.
- B. Create a new field of type Text, with a custom Validation where the available Storage Locations are listed.
- C. You should load a new Enumeration Type and call it Storage Location and load the location addresses.  
Create a new field of type Enumeration with a custom filter to only Enumerations of type show Storage Locations.
- **D. You should create a new Flex Master Data (FMD) Template with appropriate attributes and call it Storage Location. Once the template is published and sample data loaded, you can create a custom field and select the type Storage Location.**

**Answer: D**

Explanation:

For managing searchable lists of storage locations with associated attributes like addresses, the best SAP Ariba practice is to use a Flex Master Data (FMD) Template. This allows you to model the storage locations and related information dynamically. After creating the FMD template and loading the data (e.g., from CSV imports), you can create a custom field referencing the FMD type. This approach enables users to search, filter, and select valid locations efficiently, while also allowing the underlying data to be maintained separately and updated independently of the configuration.

Using text fields with validation or enumerations is insufficient for large or dynamic datasets and doesn't scale well. Date fields are unrelated to this scenario.

FMD provides a scalable and flexible solution for complex master data requirements like storage locations.

### NEW QUESTION # 32

Which of the following data elements must be manually loaded into the Production environment after full configuration migration is completed using the Intelligent Configuration Manager (ICM)? Note: There are 2 correct answers to this question.

- **A. Enumerations**
- B. User to Group Mapping
- **C. Relation and Relation Entries**
- D. Units of Measure

**Answer: A,C**

### NEW QUESTION # 33

When you have created a new custom field and marked it as reportable, saved and published your changes, but the field does not show up in reports. How can you resolve the issue?

- **A. Run the "Retrieve flexible fields metadata for reporting" task under Reporting Manager.**
- B. You did not assign the custom field to the appropriate report category.
- C. Custom fields must be created in the same module where reports are generated.
- D. Wait 2 hours for the schema to refresh automatically.

**Answer: A**

Explanation:

After publishing a custom reportable field, the "Retrieve flexible fields metadata for reporting" task must be run to update the reporting schema with the new field metadata. Without this manual step, the reports do not recognize the new field despite it being published. The system does not perform automatic timed refreshes of the schema. Module location or report category assignment is not a prerequisite for report visibility in SAP Ariba's analytics.

#### NEW QUESTION # 34

Which of the following languages is used to define defaults on fields within SAP Ariba?

- A. ABAP
- B. Python
- C. Ariba expression language
- D. JavaScript

**Answer: C**

Explanation:

SAP Ariba uses its proprietary Ariba expression language, based on OGNL (Object-Graph Navigation Language), to define default value expressions on fields. This language supports logical conditions, comparisons, and public Java method calls to create dynamic defaulting logic. ABAP, Python, and JavaScript are not supported languages for field default expressions in SAP Ariba. This expression language provides a concise and powerful way to tailor defaults based on context.

#### NEW QUESTION # 35

.....

The third format is desktop C\_ACDET\_2506 practice exam software that can be accessed easily after installing it on your Windows PC or Laptop. These formats are there so that the students can use them as per their unique needs and prepare successfully for C\_ACDET\_2506 the on first try. The C\_ACDET\_2506 mock tests are specially built for you to evaluate what you have studied.
