

值得信賴的D-PWF-OE-00考試備考經驗&資格考試中的領導者和有效的新版D-PWF-OE-00題庫上線

2026 Fast2test最新的D-PWF-OE-00 PDF版考試題庫和D-PWF-OE-00考試問題和答案免費分享：<https://drive.google.com/open?id=14f-wnwj00jsEilwjPo2aHL9CMg7Vp-LR>

你覺得成功很難嗎？覺得IT認證考試很難通過嗎？你現在正在為了EMC的D-PWF-OE-00認證考試而歎氣嗎？其實這完全沒有必要。IT認證考試其實沒有你想像的那麼神秘，我們可以利用適當的工具去戰勝它。只要你選對了工具，成功簡直就是一件輕而易舉的事情。你想知道什麼工具最好嗎？現在告訴你。Fast2test的D-PWF-OE-00考古題是最好的工具。這個考古題為你搜集並解析了很多優秀的過去考試考過的問題，並且根據最新的大綱加入了很多可能出現的新問題。這是一個可以保证你一次通过考试的考古題。

EMC D-PWF-OE-00 考試大綱：

主題	簡介
主題 1	Expanding a PowerFlex Cluster: This domain focuses on cluster expansion and maintenance including using maintenance modes, adding nodes, configuring Storage Data Servers and Meta Data Managers, and understanding PowerFlex integration with APEX.
主題 2	PowerFlex Logical Entities: This section focuses on configuring the logical structures within PowerFlex including templates, resource groups, protection domains, fault sets, and storage pools that organize and manage storage resources.
主題 3	PowerFlex Storage: This domain addresses daily storage operations including creating and managing volumes, configuring shared file systems, and working with storage data targets.

D-PWF-OE-00考試備考經驗 |輕鬆通過Dell PowerFlex Operate Exam | 馬上下載安裝

伴隨著 EMC 認證，越來越多的客戶注意到 EMC 的重要性，目前是經濟衰退的時期，找一份工作不容易，考取 EMC 認證的證書當然是有用的，能夠幫助你穩定你的位置，增加求職的法碼。如果你正在準備 D-PWF-OE-00 考試題目和答案的電子圖書的形式或自我測試軟體，以獲得適當的知識和技能，急需通過 D-PWF-OE-00 考試，可以憑藉 Fast2test 考題網最新的題庫順利通過該考試。

最新的 Converged Infrastructure D-PWF-OE-00 免費考試真題 (Q24-Q29):

問題 #24

What actions are taken when reconfiguring Storage Data Servers during cluster expansion?

(Choose two).

- A. Reallocate storage pools for load balancing
- **B. Configure Fault Sets for the new nodes**
- **C. Validate new node compatibility with existing SDS configurations**
- D. Enable data deduplication on new SDS nodes

答案: **B,C**

解題說明:

When expanding a cluster by adding new Storage Data Server (SDS) nodes:

Validate new node compatibility (Option A): Before adding a node, you must ensure it matches the hardware compatibility list (HCL). More importantly, to prevent performance bottlenecks ("stragglers"), the new nodes should ideally match the CPU, RAM, and most importantly, the drive type/performance of the existing nodes in the Storage Pool.

Configure Fault Sets for the new nodes (Option C): If the cluster is configured to use Fault Sets (which is recommended for larger clusters to ensure rack-level availability), the new node must be explicitly assigned to a specific Fault Set before it is added. You cannot add a node to a Protection Domain that uses Fault Sets without specifying which Fault Set it belongs to.

問題 #25

What are the benefits of using shared file systems in PowerFlex? (Choose two).

- **A. Provides high availability for shared data**
- **B. Simplifies data sharing between nodes**
- C. Enables deduplication and compression
- D. Enhances fault tolerance

答案: **A,B**

解題說明:

PowerFlex File (NAS) is designed for concurrent access.

Simplifies data sharing between nodes (Option A): The core benefit of a shared file system (NFS/SMB) is that multiple compute nodes (Clients) can access the exact same files simultaneously. This is essential for clustered applications, user home directories, or shared logs.

Provides high availability for shared data (Option D): PowerFlex File uses clustered NAS headers (NAS Nodes). If one NAS node fails, the IP address and file handles are automatically failed over to a surviving NAS node. This ensures that clients do not lose access to the data, maintaining high availability.

問題 #26

Which prerequisites must be met to enable replication between PowerFlex clusters? (Choose two).

- **A. Configure network connectivity between clusters**
- B. Assign replication roles to volumes
- C. Enable snapshot scheduling on both clusters
- **D. Define VLAN tagging for replication traffic**

答案: **A,D**

問題 #27

Which conditions must be met to begin a PowerFlex upgrade? (Choose two).

- **A. All nodes must be online**
- B. Metadata Managers must be active
- C. All fault sets must be reconfigured
- **D. Cluster health status must be green**

答案: **A,D**

解題說明:

To ensure a successful and non-disruptive upgrade (NDU), the PowerFlex cluster must be in a stable and healthy state before the process begins.

Cluster health status must be green (Option B): This is the primary indicator. A "Green" health state implies that there are no critical errors, no rebuilds or rebalances in progress, and sufficient capacity is available. If the cluster is in a "Red" (Critical) or "Orange" (Degraded) state, the upgrade wizard in PowerFlex Manager (or the CLI pre-check) will block the operation to prevent data loss. All nodes must be online (Option A): All configured Storage Data Servers (SDS) and Metadata Managers (MDM) must be reachable. If a node is offline or disconnected, the orchestration engine cannot verify redundancy or place that node into maintenance mode safely.

問題 #28

Post-installation tasks in PowerFlex include configuring protection domains and fault sets. True. False.

- A. False
- **B. True**

答案: B

解題說明:

* True: After the initial software deployment (Day 0), the system consists of installed MDM/SDS software but no logical storage structure.

* Day 1 Tasks: The administrator's first tasks are to:

* Create a Protection Domain (grouping the SDS nodes).

* (Optional but recommended) Configure Fault Sets within that Protection Domain for rack awareness.

* Create Storage Pools within the PD.

* Add Devices (Drives) to the Pool.

Only after these "post-installation" tasks are complete can volumes be created and mapped to hosts.

問題 #29
