AZ-801 Exam is intended for candidates who have experience with various technologies and services in hybrid scenarios, including Azure, Windows Server, and Microsoft 365.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q158-Q163):

NEW QUESTION # 158
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the

review screen.

You have a failover cluster named Cluster1 that hosts an application named App1.

The General tab in App1 Properties is shown in the General exhibit. (Click the General tab.)

The Failover tab in App1 Properties is shown in the Failover exhibit. (Click the Failover tab.)

Server1 shuts down unexpectedly.

You need to ensure that when you start Server1, App1 continues to run on Server2.

Solution: From the General settings, you move Server2 up.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:
Explanation
Server1 and Server2 are both unticked so the order they are listed in has no effect on whether the cluster will fail back.

NEW QUESTION # 159

You have an on-premises server that runs Windows Server and has the Web Server (IIS) server role installed.

The server hosts a web app that connects to an on-premises Microsoft SQL Server database.

You plan to migrate the web app to an Azure App Services web app. The database will remain on-premises.

You need to ensure that the migrated web app can access the database.

What should you configure in Azure?

- A. an Azure SQL managed instance
- B. Azure Extended Network
- C. a Hybrid Connection
- D. an on-premises data gateway

Answer: C

Explanation:

NEW QUESTION # 160

You have a failover cluster named Cluster1 that contains three nodes.

You plan to add two file server cluster roles named File1 and File2 to Cluster1. File1 will use the File Server for general use role. File2 will use the Scale-Out File Server for application data role.

What is the maximum number of nodes for File1 and File2 that can concurrently serve client connections? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation
Graphical user interface, application Description automatically generated

NEW QUESTION # 161

You have two servers that have the Web Server (IIS) server role installed. The servers are configured as shown in the following table.

Both servers are configured to enable website deployment by using the Web Deployment Tool. Server1 hosts a website named Site1 that has Web Deploy Publishing configured.

You plan to migrate Site1 to Server2.

You need to perform a pull synchronization of Site1 by using the Web Deployment Agent Service.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

https://docs.microsoft.com/en-us/iis/publish/using-web-deploy/synchronize-iis

NEW QUESTION # 162

Your network contain an Active Directory Domain Services (AD DS) domain named contoso.com. The domain was built by using domain controllers that run Windows Server 2025. You plan to deploy a custom app. The app will require a domain controller that runs a legacy version of Windows Server. What is the oldest version of Windows Server that you can use for the domain controller in contoso.com?

- A. Windows Server 2016
- B. Windows Server 2022
- C. Windows Server 2019
- D. Windows Server 2012 R2

Answer: A
