UiPath UiPath-ADAv1 시험요강:

주제	소개
주제 1	• Version Control Integration: The section highlights the benefits of version control by demonstrating the use of Studio's Git integration for adding projects, cloning repositories, committing changes, and managing branches.
주제 2	• Workflow Analyzer: Here, the topic introduces the Workflow Analyzer tool, explaining its use for project analysis and validation, and providing guidance on configuring its settings.
주제 3	• Exception Handling: This topic focuses on error management, showcasing the use of Try Catch, Throw, and Rethrow activities, along with the Retry Scope feature, to handle exceptions gracefully.
주제 4	• Logging: The section provides insights into interpreting robot execution logs and adhering to logging best practices, ensuring effective issue identification and resolution.
주제 5	• Object Repository: This topic covers the creation, publication, and consumption of UI Libraries, including the use of static and dynamic descriptors, offering a structured approach to UI element management.
주제 6	• Data Manipulation: This topic covers a range of data manipulation techniques, including string manipulation using VB.Net methods and the RegEx Builder. It also guides users through working with arrays, lists, and dictionaries, as well as building and iterating through DataTables.

주제 7	• Variables and Arguments: This topic introduces data types and delves into creating, managing, and utilizing variables, arguments, and global constants • variables. It also clarifies the distinctions between these concepts, ensuring a comprehensive understanding of data handling in automation projects.
주제 8	• Excel Automation: The section delves into Excel Automation, showcasing the use of modern Excel activities and workbook-level operations.
주제 9	• Libraries and Templates: This topic covers the creation, publication, and consumption of process libraries, along with the sharing and access of templates, promoting efficient project development and standardization.
주제 10	• Studio Interface: Here, the topic guides users through installing Studio Community Edition and connecting to Orchestrator. It covers profile differences, backstage view options, compatibility modes, and package management. Additionally, it offers an in-depth exploration of the Studio interface and its various elements.
주제 11	• Working with Files and Folders: Here, you explore creating, managing, and navigating local files and folders, providing a foundation for file system automation.
주제 12	• Business Knowledge: This topic covers the fundamental concepts of business process automation, highlighting its value proposition. It also explores key ideas related to business processes, offering a comprehensive understanding of this domain.
주제 13	• Orchestrator: This topic covers the definition of Orchestrator entities, tenant entities, and folder entities, along with their respective functionalities. It also provides practical guidance on robot provisioning, workspace management, role assignments, and logging features.
주제 14	• Control Flow: The section explains the functionality of control flow activities and their impact on workflow types. It covers the use of sequence and flowchart layouts. Lastly, it focuses on implementing IF, For Each, and While activities, among others.
주제 15	• Platform Knowledge: The section provides an overview of UiPath's product suite, including Studio and Robot variants, Orchestrator, and Integration Service, showcasing their unique contributions. It also emphasizes the benefits of Academy, Forum, and Marketplace in the UiPath ecosystem.
주제 16	• PDF Automation: The section focuses on data extraction from native and scanned PDFs, including single and multiple document scenarios.
주제 17	• Implementation Methodology: The section offers an overview of project implementation stages, interpretation of PDDs and SDDs, and the conduct of automation project peer reviews, ensuring a structured approach to development.
주제 18	• Integration Service: The section introduces Integration Service, explaining its purpose and demonstrating the use of connectors and triggers in automation projects to interact with external systems.

최신 UiPath Certified Professional - Developer Track UiPath-ADAv1 무료샘플문제 (Q272-Q277):

질문 # 272
Which of the following activities can be used to get the state of a button (enabled/disabled)?

- A. Find Element
- B. Get Text
- C. Check App State
- D. Get Attribute

정답：D

설명：
The "Get Attribute" activity can be used to get the state of a button (enabled/disabled). This activity retrieves the value of a specified attribute of a UI element, and the "enabled" attribute can be used to determine if a button is currently enabled or disabled.

질문 # 273
A developer is working with a Purchase Order automation process. The number of shipped containers and the number of items per container are extracted in two strings:
* "ShippedContainers"
* "ItemsPerContainer"
The robot must calculate the total number of items in all shipped containers as an Integer.
Which expression is suitable for calculating the total number of boxes?

- A. Convert.ToInt32(ShippedContainers) * Convert.ToInt32(ItemsPerContainer)
- B. ShippedContainers.ToInt32() * ItemsPerContainer.ToInt32()
- C. String.ToInt32(ShippedContainers) * String.ToInt32(ItemsPerContainer)
- D. CInt(ShippedContainers * ItemsPerContainer)

정답：A

설명：
To convert string values to integers and multiply them, we should use:
Convert.ToInt32(ShippedContainers) * Convert.ToInt32(ItemsPerContainer) Why is Option D Correct?
* Convert.ToInt32() is a standard .NET method that safely converts strings to integers.
* This method handles null values better than .ToInt32().
* It ensures that arithmetic operations can be performed correctly.
Why Other Options Are Incorrect?
* A (ShippedContainers.ToInt32()) #
* ToInt32() is not a valid method for String objects in VB.NET.
* B (String.ToInt32()) #
* String.ToInt32() does not exist in VB.NET.
* C (CInt(ShippedContainers * ItemsPerContainer)) #
* The multiplication must be done after conversion, not before.

질문 # 274
When should the Show Elements button be used in the Computer Vision wizard?

- A. Filtering out specific UI elements from being processed by the Computer Vision engine.
- B. Highlighting all Ul elements that have been identified by the Computer Vision analysis.
- C. Displaying a list of all available UI elements and their properties.
- D. Activating a real-time view of the target app's UI during automation.

정답：B

설명：

Explanation

The Show Elements button in the Computer Vision wizard is used to toggle the highlighting of all UI elements that have been detected by the Computer Vision engine on the target application. This helps to visualize the accuracy and scope of the UI element recognition and to select the desired UI element for automation. (UiPath Automation Developer study guide) References:

질문 # 275

A developer wants to extract hidden text from a pdf file. Which output method(s) should be used?

- A. FullText and Native
- B. OCR
- C. FullText only
- D. Native only

정답：C

설명：

Explanation

To extract hidden text from a pdf file, the output method that should be used is FullText only. The FullText output method is one of the options available in the Read PDF Text activity, which reads all the characters from a specified pdf file and stores them in a string variable3. The FullText output method extracts the text from the pdf file as it is, without keeping the formatting or the position of the text. The FullText output method can also extract the hidden text from the pdf file, which is the text that is not visible on the screen, but can be copied and pasted into another application4. For example, the hidden text can be the metadata, comments, or annotations of the pdf file. The FullText output method is suitable for extracting hidden text from a pdf file, as it does not depend on the visibility or the layout of the text. The other output methods, such as Native or OCR, are not suitable for extracting hidden text from a pdf file, as they rely on the appearance or the position of the text on the screen. The Native output method preserves the formatting and the position of the text, but it cannot extract the text that is not visible or selectable5. The OCR output method converts the text from the pdf file into an image and then extracts the text from the image, but it cannot extract the text that is not displayed or recognized by the OCR engine6.

질문 # 276

Which Scraping method should be used for the Get Text activity to capture hidden text from an application?

- A. Default
- B. Text attribute
- C. Native
- D. Full text

정답：D

설명：

The Get Text activity is used to extract the text value of a specified UI element. It does not use any of the scraping methods by default, but it can be configured to use the Full Text method in the Properties panel. The Full Text method is able to capture hidden text from an application, as well as the entire visible text and editable text. The Full Text method uses an internal OCR engine that works with most applications and languages.
