You can take full advantage of the fragmented time to learn, and eventually pass the authorization of Project-Management exam.

NCARB Project-Management Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Resource Management: This section of the exam measures the skills of project managers and covers how to determine the right team composition and manage time allocation for successful project delivery. It focuses on evaluating criteria for assembling teams and ensuring resources are properly managed to execute the project within agreed terms.
Topic 2	<ul style="list-style-type: none">Project Execution: This section of the exam measures skills of architectural associates and covers the management of project execution through administrative procedures rather than design decisions. It addresses evaluating budgets, managing scope changes, preparing project documentation in line with delivery methods, and securing necessary approvals from relevant authorities.
Topic 3	<ul style="list-style-type: none">Contracts: This section of the exam measures the skills of project managers and covers the analysis of contracts that govern the relationships between architects, owners, contractors, and consultants. It highlights verifying adherence to agreements, interpreting key contractual elements, and ensuring consultant work is properly integrated into the project.
Topic 4	<ul style="list-style-type: none">Project Work Planning: This section of the exam measures the skills of architectural associates and covers the development and communication of an effective project work plan. It emphasizes maintaining schedules, setting clear criteria for work planning, and ensuring consistent communication with stakeholders, including owners, contractors, consultants, and internal staff.
Topic 5	<ul style="list-style-type: none">Project Quality Control: This section of the exam measures skills of project managers and covers procedures for ensuring quality and maintaining the Standard of Care throughout the project. It focuses on applying regulatory requirements, reviewing documentation for quality, reducing risks and liabilities, and managing the design process to preserve its objectives

They constantly use their industry experiences to provide the precise logic verification. The Project-Management prep material is compiled with the highest standard of technology accuracy and developed by the certified experts and the published authors only. The test bank is finished by the senior lecturers and products experts. The Project-Management Exam Dump includes the latest Project-Management PDF test questions and practice test software which can help you to pass the test smoothly. The test questions cover the practical questions in the test NCARB certification and these possible questions help you explore varied types of questions which may appear in the test and the approaches you should adapt to answer the questions.

NCARB ARE 5.0 Project Management (PjM) Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

Subsequent to the preparation of construction documents, prior to permitting, the enactment of codes or laws requires changes to the project.

Which of the following should occur?

- A. The architect should seek no compensation.
- B. The architect should seek compensation from the governing body.
- C. The architect should be compensated for the changes as an additional service.
- D. The owner should seek compensation from the governing body.

Answer: C

Explanation:

According to AIA B101, Section 4.2 (Additional Services), changes required by the enactment or revision of codes, laws, or regulations after the preparation of construction documents are considered Additional Services. The architect is entitled to additional compensation for the time and work required to revise the documents accordingly.

NEW QUESTION # 43

The main goals on a large project are ease of communication and commitment from the project team.

Which scheduling technique should be used?

- A. Milestone chart
- B. Critical path method
- C. Interactive bar chart

Answer: C

Explanation:

Interactive bar charts are ideal for large projects where team commitment and communication are priorities.

Unlike a simple milestone chart or the more complex Critical Path Method (CPM), interactive bar charts provide a visual, time-based representation of tasks that facilitates easy understanding across disciplines.

When developed in a collaborative setting (such as pull-planning or in-person planning sessions), these charts help the project team see their roles, identify dependencies, and commit to deliverables.

The ARE 5.0 Handbook (Project Management division) describes interactive bar charts as excellent tools for collaborative environments where schedule visibility and team accountability are essential.

These charts promote communication across team members and are easier for non-technical stakeholders to interpret.

NEW QUESTION # 44

While conducting a site visit for a residential tower delivered through the design-build method, an architect observes several construction workers without hard hats and other unsafe working conditions.

How should the architect proceed?

- A. Request that the contractor review safety precautions that need to be taken with construction workers.
- B. Immediately instruct construction workers on which safety precautions need to be taken.
- C. Document the unsafe working conditions and send a memo to the owner copying the contractor.
- D. Document the unsafe working conditions and send a memo to the contractor copying the owner.

Answer: D

Explanation:

Although safety is primarily the contractor's responsibility (per AIA A201), the architect has an ethical and limited contractual obligation to report unsafe site conditions observed during site visits. The correct action is to document the issue in writing and notify the contractor, while copying the owner. Directing the contractor's crew is outside the architect's authority.

NEW QUESTION # 45

The architect is on site to evaluate the completed work by the contractor. During the evaluation, the architect notices a structural connection that deviates from the contract documents.

According to AIA B101, to which party should the architect report this observed deviation?

- A. Owner
- B. Building inspector
- C. Contractor
- D. Structural engineer

Answer: A

Explanation:

Per AIA B101 § 3.6.2.1, the architect is required to notify the owner of any deviations from the contract documents observed during site visits. While the architect may also discuss it with the contractor and engineer, the formal obligation is to report it to the owner. The contractor is ultimately responsible for conformance with contract documents, and further action (like issuing a notice of nonconformance or requiring correction) may follow.

NEW QUESTION # 46

During the CD phase, it is discovered that the owner's food service consultant made a mistake that results in the owner asking the architect to revise the design.

How should the architect proceed?

- A. Issue a change order
- B. Proceed to bidding and make changes in construction
- C. Submit an additional services request

Answer: C

Explanation:

Comprehensive Detailed Explanation:

If the owner's food service consultant made an error and the architect is asked to revise the design to address it, that request falls outside the architect's basic services and is considered an Additional Service. Per AIA B101, the architect should submit a formal request for additional services, outlining the scope and cost of the requested changes.
