최신DS0-001시험문제집인증덤프데모문제다운

Exam : **DS0-001**

Title : CompTIA DataSys+
Certification Exam

https://www.passcert.com/DS0-001.html

그 외, Pass4Test DS0-001 시험 문제집 일부가 지금은 무료입니다：https://drive.google.com/open?
id=1v6jNbFG0YmTfsvXqB3AE64DbvBc1wyWM

Pass4Test는IT업계전문가들이 그들의 노하우와 몇 년간의 경험 등으로 자료의 정확도를 높여 응시자들의 요구를
만족시켜 드립니다. 우리는 꼭 한번에CompTIA DS0-001시험을 패스할 수 있도록 도와드릴 것입니다. 여러분은
CompTIA DS0-001시험자료 구매로 제일 정확하고 또 최신시험버전의 문제와 답을 사용할 수 있습니다. Pass4Tes의
인증시험적중 율은 아주 높습니다. 때문에 많은 IT인증시험준비중인분들에세 많은 편리를 드릴수 있습니다.100%
정확도 100%신뢰.여러분은 마음편히 응시하시면 됩니다.

CompTIA DS0-001 시험요강：

주제	소개
주제 1	• Database Fundamentals: This topic covers database structure types, SQL code development and modification based on scenarios, comparison of scripting methods and environments, and the impact of programming on database operations.
주제 2	• Business Continuity: Finally, this topic covers the importance of disaster recovery techniques. Moreover, the topic explains backup and restore best practices and processes.
주제 3	• Database Deployment: In this topic, you'll find discussions on database planning and design aspects. It also focuses on the implementation, testing, and deployment phases of databases.

주제 4	• Data and Database Security: This topic focuses on data security concepts, governance and regulatory compliance purposes, implementing authentication and authorization policies and best practices. Additionally, the topic discusses database infrastructure security, and understanding types of attacks and their effects on data systems.
주제 5	• Database Management and Maintenance: Here, you'll learn about monitoring and reporting for database management and performance, common database maintenance processes, documentation production, and relevant tools usage. Lastly, the topic focuses on implementing data management tasks.

DS0-001 100％시험패스 덤프자료 - DS0-001퍼펙트 공부문제

Pass4Test는 IT업계에서 유명한 IT인증자격증 공부자료를 제공해드리는 사이트입니다. 이는Pass4Test 의 IT전문가가 오랜 시간동안 IT인증시험을 연구한 끝에 시험대비자료로 딱 좋은 덤프를 제작한 결과입니다. CompTIA인증 DS0-001덤프는 수많은 덤프중의 한과목입니다. 다른 덤프들과 같이CompTIA인증 DS0-001덤프 적중율과 패스율은 100% 보장해드립니다. CompTIA인증 DS0-001시험에 도전하려는 분들은Pass4Test 의CompTIA인증 DS0-001덤프로 시험을 준비할것이죠?

최신 CompTIA DataSys+ DS0-001 무료샘플문제 (Q19-Q24):

질문 # 19
Which of the following can be used to protect physical database appliances from damage in a server room? (Choose two.)

- A. Biometric access systems
- B. Database control systems
- C. Fire suppression systems
- D. Key card systems
- E. Camera systems
- F. Cooling systems

정답：C,F

설명：
The two options that can be used to protect physical database appliances from damage in a server room are fire suppression systems and cooling systems. Fire suppression systems are systems that detect and extinguish fires in a server room using water, gas, foam, or other agents. Fire suppression systems help prevent damage to physical database appliances caused by fire hazards such as overheating, electrical faults, or flammable materials. Cooling systems are systems that regulate the temperature and humidity in a server room using fans, air conditioners, chillers, or other devices. Cooling systems help prevent damage to physical database appliances caused by excessive heat or moisture that may affect their performance or lifespan. The other options are either not related or not effective for this purpose. For example, biometric access systems, camera systems, and key card systems are systems that control the access to a server room using fingerprints, facial recognition, video surveillance, or magnetic cards; these systems help prevent unauthorized entry or theft of physical database appliances, but not damage caused by environmental factors; database control systems are systems that manage the functionality and security of databases using software tools or commands; these systems help protect logical database appliances from errors or attacks, but not physical damage caused by environmental factors.
Reference: CompTIA DataSys+ Course Outline, Domain 5.0 Business Continuity, Objective 5.4 Given a scenario, implement disaster recovery methods.

질문 # 20
Which of the following is recommended in order to provide encrypted data communication pathways for information as it is transmitted over a network?

- A. TLS
- B. NFS
- C. TCP/IP
- D. SMB

정답：A

설명：
The option that is recommended in order to provide encrypted data communication pathways for information as it is transmitted over a network is TLS. TLS, or Transport Layer Security, is a protocol that provides secure communication over the internet by encrypting the data using cryptographic algorithms and keys. TLS also provides authentication and integrity by verifying the identity of the parties involved and ensuring that the data has not been altered or tampered with. TLS can be used to protect various types of data, such as web traffic, email, instant messaging, voice over IP, etc. The other options are either not related or not sufficient for this purpose. For example, TCP/IP, or Transmission Control Protocol/Internet Protocol, is a set of protocols that defines how data is transmitted and routed over the internet, but does not provide encryption or security; NFS, or Network File System, is a protocol that allows users to access and share files over a network, but does not provide encryption or security; SMB, or Server Message Block, is a protocol that allows users to access and share files, printers, and other resources over a network, but does not provide encryption or security. Reference: CompTIA DataSys+ Course Outline, Domain 4.0 Data and Database Security, Objective 4.2 Given a scenario, implement security controls for databases.

질문 # 21
A database administrator is conducting a stress test and providing feedback to a team that is developing an application that uses the Entity Framework. Which of the following explains the approach the administrator should use when conducting the stress test?

- A. Review application tables and columns, and report findings.
- B. Check the clustered and non-clustered indexes, and report findings.
- C. Write queries directly into the database and report findings.
- D. Capture business logic, check the performance of codes, and report findings.

정답：D

설명：
The approach that the administrator should use when conducting the stress test is to capture business logic, check the performance of codes, and report findings. This will help the administrator to evaluate how well the application handles high volumes of data and transactions, identify any bottlenecks or errors in the code, and provide feedback to the development team on how to improve the application's efficiency and reliability. The other options are either too narrow or too broad in scope, and do not address the specific needs of an application that uses the Entity Framework. Reference: CompTIA DataSys+ Course Outline, Domain 4.0 Data and Database Security, Objective 4.3 Given a scenario, monitor database performance and security.

질문 # 22
Which of the following concepts applies to situations that require court files to be scanned for permanent reference and original documents be stored for ten years before they can be discarded?

- A. Global regulations
- B. Data retention policies
- C. Data loss prevention
- D. Data classification

정답：B

설명：
The concept that applies to situations that require court files to be scanned for permanent reference and original documents be stored for ten years before they can be discarded is data retention policies. Data retention policies are rules or guidelines that specify how long data should be kept and when it should be deleted or archived. Data retention policies are often based on legal, regulatory, or business requirements, and help organizations manage their data lifecycle, storage, and compliance. The other options are either not related or not specific to this situation. For example, data loss prevention is a process that aims to prevent data from being leaked, stolen, or corrupted; data classification is a process that assigns labels or categories to data based on its sensitivity, value, or risk; global regulations are laws or standards that apply to data across different countries or regions. Reference: CompTIA DataSys+ Course Outline, Domain 4.0 Data and Database Security, Objective 4.1 Given a scenario, apply security principles and best practices for databases.

질문 # 23

A database administrator is assisting developers with finding the best tables and columns to include in an application. Which of the following resources is the most relevant for this task?

- A. SOP documents
- B. Data dictionary
- C. ERD
- D. Transaction log

정답：B

설명：

A data dictionary provides detailed information about database tables, columns, and their attributes, helping developers understand the structure and relationships to select the best tables and columns for the application.

질문 # 24
