

2026 JN0-364 Sample Questions Answers: Service Provider Routing and Switching, Specialist (JNCIS-SP) - Latest Juniper Updated JN0-364 Dumps

2026 Latest Dumpexams JN0-364 PDF Dumps and JN0-364 Exam Engine Free Share: <https://drive.google.com/open?id=1qiqsKA9xCIiJMYNh9uzn0YWM6ojG8dt>

Candidates for the JN0-364 exam can rely on our practice material because it is of the greatest quality and will assist them in preparing for the Juniper certification test successfully on the first try. Dumpexams's main goal is to offer 100% actual JN0-364 Exam Questions in order to help applicants clear the JN0-364 test in a short time. We are confident that our updated JN0-364 practice questions will help you pass the Service Provider Routing and Switching, Specialist (JNCIS-SP) (JN0-364) certification exam on the first attempt.

To let the clients be familiar with the atmosphere and pace of the real JN0-364 exam we provide the function of stimulating the exam. In such a way, our candidates will become more confident by practising on it. And our expert team updates the JN0-364 Study Guide frequently to let the clients practice more. So the quality of our JN0-364 practice materials is very high and we can guarantee to you that you will have few difficulties to pass the exam.

Updated JN0-364 Dumps | JN0-364 Best Study Material

Do you want to get more respects from other people? Do you long to become a powerful people? Our JN0-364 exam torrent is compiled by professional experts that keep pace with contemporary talent development and makes every learner fit in the needs of the society. If you choose our JN0-364 Study Materials, you will pass JN0-364 exam successful in a short time. There is no doubt that our JN0-364 exam question can be your first choice for your relevant knowledge accumulation and ability enhancement.

Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q44-Q49):

NEW QUESTION # 44

Click the Exhibit button. Referring to the exhibit, R1 is advertising prefix 203.0.113.0/24 to R2 over EBGp. R2 is configured to advertise this prefix into iBGP. R3 receives the 203.0.113.0/24 route, however the route is hidden.

Which configuration statement do you need to add to R2 to solve this problem?

- A. 203.0.113.0/24 or longer
set policy-options policy-statement export-to-ibgp then local-preference
- B. set policy-options policy-statement export-to-ibgp from route-filter
- C. set policy-options policy-statement export-to-ibgp then next-hop self
- D. 50
set protocols bgp group EBGp export export-to-ibgp

Answer: C

Explanation:

R2 is advertising the EBGp-learned route into iBGP without changing the next-hop, so R3 receives the route with a next-hop of 172.16.10.1 (R1). Because that next-hop is not reachable from R3, Junos marks the route as hidden. Setting next-hop self on R2 makes the next-hop reachable (R2), so the route becomes usable on R3.

NEW QUESTION # 45

Click the Exhibit button.

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. The switch1 device is using VSTP.
- B. The ge-0/0/8, ge-0/0/9, and ge-0/0/11 interfaces are using the default interface priority.
- C. The bridge priority for switch 1 is 32k.
- D. The switch1 device is the root bridge.

Answer: C,D

Explanation:

All listed ports are in the designated role and forwarding state, and the designated bridge ID shown matches the local bridge ID, which indicates the device is acting as the root bridge for this spanning-tree instance.

The bridge ID begins with 32768, which corresponds to the default bridge priority of 32,768 (32k).

NEW QUESTION # 46

Click the Exhibit button.

Which destination IP address will be matched by the aggregate route shown in the exhibit?

- A. packets destined to 10.16.0.4
- B. packets destined to 10.16.3.79
- C. packets destined to 10.16.1.214
- D. packets destined to 10.16.4.183

Answer: B

Explanation:

The aggregate route is 10.16.2.0/23. A /23 prefix covers the address range from 10.16.2.0 through 10.16.3.255. Therefore, any destination within that range will match the aggregate route.

The address 10.16.3.79 falls within this range, so packets destined for that address match the aggregate route.

NEW QUESTION # 47

For two or more switches to participate in the same MSTP region, which parameter must match?

- A. Region name
- B. Extended system ID
- C. Root bridge priority
- D. Root bridge ID

Answer: A

Explanation:

Multiple Spanning Tree Protocol (MSTP), as defined in IEEE 802.1s and implemented in Juniper Networks Junos OS, allows for the grouping of VLANs into specific spanning tree instances. This provides significant scalability and load-balancing advantages over traditional STP or RSTP. To achieve this, switches must be grouped into logical "Regions." According to Juniper documentation, for two or more switches to be considered part of the same MSTP Region, they must possess an identical MSTP Configuration Identifier. This identifier consists of three specific attributes that must match exactly across all participating switches:

* MSTI Name (Region Name): A descriptive string (up to 32 characters) that identifies the region.

* MSTI Revision Level: A numerical value (0-65535) used to track configuration changes.

* VLAN-to-Instance Mapping: The specific table that defines which VLAN IDs are associated with which Multiple Spanning Tree Instances (MSTIs).

If even one of these parameters—such as the Region name (Option A)—differs, the switches will treat each other as being in separate regions. When switches are in different regions, they interact using the Common Spanning Tree (CST), effectively seeing the other region as a single "virtual bridge," which limits the granularity of traffic engineering.

The Extended system ID (Option B) is a component of the Bridge ID used to carry VLAN information in PVST+ but is not a region-matching requirement. Root bridge priority (Option C) and Root bridge ID (Option D) are variables used during the STP election process to determine the topology's root, but they do not define the boundaries of an MSTP region itself.

NEW QUESTION # 48

By default, which three fields are used in the ECMP load-balancing algorithm for Layer 3 IPv4 traffic? (Choose three.)

- A. source port
- B. outgoing interface index
- C. protocol
- D. destination address
- E. incoming interface index

Answer: C,D,E

NEW QUESTION # 49

.....

Both practice tests simulate the Juniper JN0-364 real exam environment and produce results of your attempts on the spot. In this way, you will be able to not only evaluate your progress but also overcome mistakes before the JN0-364 actual examination. Windows computers support the Service Provider Routing and Switching, Specialist (JNCIS-SP) JN0-364 desktop practice exam software. The Service Provider Routing and Switching, Specialist (JNCIS-SP) JN0-364 web-based practice test needs an active internet connection.
