

Exam IDP Fees | IDP Latest Test Preparation

DOWNLOAD the newest PracticeMaterial IDP PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1IE4jIw9LGUgZFHGgVc_H6TvrMxvLfVYF

Before you really attend the IDP exam and choose your materials, we want to remind you of the importance of holding a certificate like this one. Obtaining a IDP certificate likes this one can help you master a lot of agreeable outcomes in the future, like higher salary, the opportunities to promotion and being trusted by the superiors and colleagues. All these agreeable outcomes are no longer dreams for you. And with the aid of our IDP Exam Preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible. It all starts from our IDP learning questions.

You know, the time is very tight now. You must choose a guaranteed product. IDP study materials have a 99% pass rate. This will definitely give you more peace of mind when choosing our IDP exam questions. In today's society, everyone is working very hard. If you want to walk in front of others, you must be more efficient. After 20 to 30 hours of studying IDP Exam Materials, you can take the exam and pass it for sure.

Salient Features of CrowdStrike IDP Web-Based Practice Test Software

Candidates may have different ways to practice the IDP study materials, some may like to practice in paper, and some may like to practice it in the computer. We have three versions for you to meet your different needs. If you like to practice in the paper, IDP PDF version will be your choice, which can be printed into the hard one. If you like to practice on your computer, IDP Soft test engine will be your best, choice, besides it also stimulates the exam environment, you can experience the exam environment through this.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.
Topic 2	<ul style="list-style-type: none">• Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.
Topic 3	<ul style="list-style-type: none">• Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.

Topic 4	<ul style="list-style-type: none"> • User Assessment: Examines user attributes, differences between users • endpoints • entities, risk baselining, risky account types, elevated privileges, watchlists, and honeypot accounts.
Topic 5	<ul style="list-style-type: none"> • Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling • disabling rules, applying changes, and required Falcon roles.
Topic 6	<ul style="list-style-type: none"> • Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 7	<ul style="list-style-type: none"> • Domain Security Assessment: Focuses on domain risk scores, trends, matrices, severity • likelihood • consequence factors, risk prioritization, score reduction, and configuring security goals and scopes.
Topic 8	<ul style="list-style-type: none"> • Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.
Topic 9	<ul style="list-style-type: none"> • Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom • templated • scheduled workflows, branching logic, and loops.
Topic 10	<ul style="list-style-type: none"> • Threat Hunting and Investigation: Focuses on identity-based detections and incidents, investigation pivots, incident trees, detection evolution, filtering, managing exclusions and exceptions, and risk types.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

Can a specific detection be excluded altogether or just per entity?

- A. Only detections can be disabled using the Identity-Based Detection # Detection Exclusion page
- **B. All detections can be disabled, some detections support excluding entities**
- C. Adding an exclusion for a detection creates a security hole, therefore a detection cannot be excluded
- D. Only specific entities can be excluded by using the Identity-Based Detection # Detection Exclusion page

Answer: B

Explanation:

Falcon Identity Protection provides flexible control over how identity-based detections are handled through the Detection Exclusions framework. According to the CCIS curriculum, administrators can either disable an entire detection type or, where supported, exclude specific entities such as users, service accounts, or endpoints from triggering that detection.

Not all detections support entity-level exclusions. For detections that do, exclusions allow organizations to suppress known benign behavior without disabling the detection globally. This is particularly useful for service accounts or legacy systems that generate expected but non-malicious activity. When entity-level exclusion is not supported, administrators may choose to disable the detection entirely, which stops it from generating alerts across the environment.

The CCIS documentation clearly explains this dual model:

- * All detections can be disabled, regardless of type
- * Only some detections support entity-based exclusions

This approach balances operational flexibility with security integrity and avoids the misconception that exclusions automatically create security gaps. Therefore, Option B is the correct and verified answer.

NEW QUESTION # 14

Under which CrowdStrike documentation category could you find Identity Protection API information?

- A. CrowdStrike APIs
- B. CrowdStrike Store
- C. Falcon Management
- D. Tools and Reference

Answer: A

Explanation:

Identity Protection API documentation is part of CrowdStrike's centralized API documentation structure.

According to the CCIS curriculum, Identity Protection API information is located under the "CrowdStrike APIs" documentation category.

This category includes:

- * API authentication and scopes
- * Identity Protection GraphQL schemas
- * Query examples for detections, incidents, users, and risk
- * Usage guidance and limitations

CrowdStrike consolidates all API-related documentation in one location to ensure consistent access and maintenance across Falcon modules. Identity Protection APIs are not documented under Falcon Management, Store, or general reference sections.

Because all product APIs-including Identity Protection-are documented under CrowdStrike APIs, Option A is the correct and verified answer.

NEW QUESTION # 15

Which of the following actions will NOT help to decrease a domain risk score?

- A. Enforcing NTLMv2 responses
- B. Upgrading endpoints running end-of-life operating systems
- C. Upgrading endpoints running end-of-life Acrobat Reader
- D. Enabling SMB Signing within Active Directory

Answer: C

Explanation:

Falcon Identity Protection evaluates domain risk by analyzing identity-related weaknesses such as insecure authentication protocols, legacy directory configurations, and exposure to credential-based attacks. Actions that harden Active Directory and authentication mechanisms will directly reduce domain risk scores.

Measures such as enabling SMB signing, enforcing NTLMv2, and upgrading unsupported operating systems remove common identity attack paths and are explicitly recommended in the CCIS curriculum as effective domain risk remediation steps.

In contrast, upgrading end-of-life Acrobat Reader addresses an endpoint application vulnerability, not an identity or directory-related risk. While important for endpoint hygiene, it does not influence identity telemetry, authentication behavior, or domain controller security assessed by Falcon Identity Protection.

Because domain risk scoring is strictly tied to identity infrastructure and authentication posture, Option B does not contribute to lowering the domain risk score and is therefore the correct answer.

NEW QUESTION # 16

Which of the following are minimum requirements for showing the Falcon Identity Verification Dialog on the end user's machine?

- A. Internet Explorer 9 and Windows Server 2008
- B. Windows Vista and .NET 3.5
- C. Windows Server 2008 and PowerShell 5.1
- D. .NET 3.5 and PowerShell 5.1

Answer: A

Explanation:

The Falcon Identity Verification Dialog is used to prompt users for identity verification during conditional access enforcement.

According to the CCIS curriculum, Internet Explorer 9 and Windows Server 2008 represent the minimum supported requirements for rendering the Identity Verification Dialog on an end user's system.

This requirement exists because the dialog relies on supported browser and OS components to present authentication challenges reliably during enforcement workflows. Systems that do not meet these minimum requirements may fail to display the dialog.

correctly, impacting the enforcement of MFA or identity verification actions.

The other options reference runtime frameworks or PowerShell versions that are not directly responsible for rendering the verification dialog. Therefore, Option A is the correct and verified answer.

NEW QUESTION # 17

Which of the following users would most likely have a HIGH risk score?

- A. Privileged user with a Compromised Password
- B. User that has not logged in recently and is marked as Stale
- C. User that is a member of the Domain Admins group
- D. User that recently logged in from a shared endpoint

Answer: A

Explanation:

Falcon Identity Protection calculates user risk scores based on a combination of privilege level, credential exposure, and behavioral indicators. According to the CCIS curriculum, a privileged user with a compromised password represents one of the highest-risk identity scenarios.

Privileged accounts—such as administrators or service accounts with elevated access—already pose increased risk due to their access scope. When Falcon detects that such an account's credentials have been compromised, the risk escalates significantly because attackers can immediately gain high-impact access without further escalation.

The other options do not inherently represent the same level of risk:

- * Logging in from a shared endpoint may increase risk but is context-dependent.
- * Stale users are risky but typically lower risk than active compromised credentials.
- * Domain Admin group membership alone does not imply compromise.

Because credential compromise combined with privilege dramatically increases attack potential, Option B is the correct and verified answer.

NEW QUESTION # 18

.....

There are many advantages of our product and it is worthy for you to buy it. You can download and try out our IDP guide questions demo before the purchase and use them immediately after you pay for them successfully. Once you pay for it, we will send to you within 5-10 minutes. Then you can learn and practice it. We update the IDP Torrent question frequently and provide the discounts to the old client. We check the update every day, once we update, we will send it to you as soon as possible. There are many benefits to buy IDP guide torrent such as after the client pass the exam they can enter in the big company and double their wages.
