Exam GICSP Collection Pdf & GICSP Answers Free

The made from ExamsLabs is designed by way of specialists and is often updated to mirror the present day modifications inside the GICSP content. The GICSP recognizes that scholars may also have distinctive learning patterns and options. Consequently, the ExamsLabs gives PDF format, desktop exercise examination software program, and GICSP examination questions to assist customers prepare for the GIAC GICSP examination correctly.

GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q11-Q16):

NEW QUESTION # 11

What is the role of a Distributed Control System (DCS) at Level 2 in an ICS environment?

Response:

- A. Storing large datasets for future analysis
- B. Conducting business planning and logistics
- **C. Managing real-time process control and monitoring**
- D. Handling external network traffic

Answer: C

NEW QUESTION # 12

What is the primary function of Level 2 devices in the Purdue Enterprise Reference Architecture (PERA)?

Response:

- **A. Managing supervisory control and monitoring**
- B. Conducting business operations and logistics
- C. Real-time control of field devices

- D. Managing access to corporate applications

Answer: A

NEW QUESTION # 13

Which device is responsible for executing control logic in a typical Level 1 ICS environment?

Response:

- A. Sensor
- B. Firewall
- **C. Programmable Logic Controller (PLC)**
- D. Human-Machine Interface (HMI)

Answer: C

NEW QUESTION # 14

What is a recommended practice for configuring enforcement boundary devices in an ICS control network?

- **A. Enable full packet collection for all allowed and denied traffic rules on next-generation firewalls**
- B. Use an egress policy that allows everything out except for that which is explicitly denied
- C. Create a rule which drops inbound packets containing a source address from within the protected network
- D. Create one rule for each authorized conversation in a stateless access control list

Answer: A

Explanation:

Enforcement boundary devices like firewalls play a critical role in ICS network security. A best practice is to:

Enable full packet collection for all allowed and denied traffic (B) on next-generation firewalls. This facilitates deep inspection, detailed logging, and auditing, which are vital for detecting anomalous or malicious activity.

Other options are less effective or counterproductive:

(A) Dropping inbound packets with source addresses from the protected network is generally illogical and may disrupt normal traffic.

(C) Stateless access control is less secure and less manageable than stateful inspection.

(D) Default allow egress policies increase risk by permitting unnecessary outbound traffic.

GICSP stresses detailed logging and stateful inspection as core security controls for enforcement points.

NEW QUESTION # 15

Implementing VLANs can provide which of the following?

- A. Sandboxing ICS application memory from other system resources
- B. Separation of duties for different guest OSES on a virtual host
- C. Stopping unauthorized access to ICS controller diagnostic ports
- **D. Segmenting control device traffic from other network services**

Answer: D

Explanation:

VLANs (Virtual LANs) allow logical segmentation of a physical network, which can be used to separate control device traffic from other network services (A), improving security and performance.

Sandboxing (B) relates to application or OS memory isolation, not VLANs.

Separation of duties for guest OSES (C) is related to virtualization, not VLANs.

Preventing access to diagnostic ports (D) requires port security or access control, not VLAN segmentation alone.

GICSP highlights VLANs as a fundamental technique for network segmentation in ICS security architectures.
