## Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q14-Q19):

### NEW QUESTION # 14

Several users have informed you that the FortiSOAR GUI is not reachable. When troubleshooting, which step should you take first?

- A. Enter the `systemctl status nginx` command to gather more information.
- B. Enter the `csadm license --show-details` command to check if there is a duplicate license.
- C. Review the `connectors.log` file to see what is happening to the HTTPS connections.
- D. Enter the `csadm services --restart nginx` command to restart only the Nginx process.

**Answer: A**

Explanation:

When troubleshooting the issue of the FortiSOAR GUI not being reachable, the first step should be to check the status of the `nginx` service, which is responsible for managing web requests. Using the command `systemctl status nginx` will provide information on whether the service is running and any potential issues or errors related to it. This approach is more efficient as it directly addresses the service responsible for the web interface, making it possible to diagnose and resolve common issues such as service failure, configuration errors, or connectivity problems.

### NEW QUESTION # 15

Which edition of license, when deployed, will serve as a primary node in a distributed deployment?

- A. MT\_Tenant
- B. Enterprise
- C. MT
- D. MT\_RegionalSOC

**Answer: C**

### NEW QUESTION # 16

Which two statements about appliance users are true? (Choose two.)

- A. Appliance users use two-factor authentication for messages sent to the API.
- B. Appliance users use time-expiring tokens for primary authentication.
- C. Appliance users do not have a login ID and do not add to the license count.
- D. Appliance users represent non-human users.

**Answer: C,D**

Explanation:

In FortiSOAR, appliance users are accounts that represent non-human entities, such as system processes or integrations. These users do not require login IDs and therefore do not contribute to the licensing user count. Appliance users are configured for backend tasks or to interact with external systems, enabling automated processes without consuming standard user licenses. This approach optimizes system resources and keeps licensing costs manageable.

### NEW QUESTION # 17

Which service on FortiSOAR is the playbook scheduler?

- A. `uwsgi`
- B. `celeryd`
- C. `cyops-torccat`
- D. `colerybeatd`

**Answer: D**

Explanation:

In FortiSOAR, the service responsible for the playbook scheduling functionality is colcrybeatd. This service manages the timing and execution of scheduled playbooks, allowing for the automation of various tasks at specified intervals. It ensures that playbooks execute according to their configured schedules, which can include tasks such as data ingestion, threat detection, or incident response actions. Proper functioning of this service is essential for the reliable automation of time-dependent processes within FortiSOAR.

### NEW QUESTION # 18

When configuring the system proxy on FortiSOAR, which two URLs should be accessible from the proxy server? (Choose two.)

- A. <https://fortiguard.com>
- B. <https://iepo.fortisoar.fortinet.com>
- C. <https://globalupdate.fortinet.net>
- D. <https://licensing.fortinet.net>

Answer: B,C

Explanation:

When configuring the system proxy for FortiSOAR, it is essential to ensure connectivity to certain URLs to maintain system updates and licensing. For FortiSOAR, access to <https://iepo.fortisoar.fortinet.com> is required for incident enrichment and analysis, while <https://globalupdate.fortinet.net> is necessary for global updates to keep the system up-to-date with the latest threat information. These connections allow FortiSOAR to communicate with Fortinet's servers to fetch updated threat intelligence and system updates, which are critical for the operational effectiveness of FortiSOAR.
