

100% Pass High Hit-Rate F5 - F5CAB3 Cert

Using these F5 F5CAB3 practice test software you will identify your mistakes, gain confidence and learn time-management skills. It will help you to prepare better for the final F5CAB3 exam. DumpsTests F5 F5CAB3 Valid Dumps - Free Demo Download & Refund Guarantee F5 F5CAB3 exam dumps are the best option if you really want to pass the BIG-IP Administration Data Plane Configuration exam on your first attempt.

People who want to pass the exam have difficulty in choosing the suitable F5CAB3 study materials. They do not know which study materials are suitable for them, and they do not know which the study materials are best. Our company can promise that the F5CAB3 Study Materials from our company are best among global market. As is known to us, the F5CAB3 study materials from our company are the leading practice materials in this dynamic market.

Proven Way to Pass the F5CAB3 Exam on the First Attempt

DumpsTests is one of the trusted and reliable platforms that is committed to offering quick BIG-IP Administration Data Plane Configuration (F5CAB3) exam preparation. To achieve this objective DumpsTests is offering valid, updated, and Real F5CAB3 Exam Questions. These DumpsTests F5CAB3 exam dumps will provide you with everything that you need to prepare and pass the final F5CAB3 exam with flying colors.

F5 BIG-IP Administration Data Plane Configuration Sample Questions (Q46-Q51):

NEW QUESTION # 46

A BIG-IP Administrator uses backend servers to host multiple services per server. There are multiple virtual servers and pools defined, referencing the same backend servers.

Which load balancing algorithm is most appropriate to have an equal number of connections on each backend server?

- A. Least Connections (member)
- B. Predictive (member)
- C. Least Connections (node)
- D. Predictive (node)

Answer: C

Explanation:

Least Connections (node) balances connections across the physical server regardless of how many services or pool members exist on that node.

NEW QUESTION # 47

Users are unable to reach an application. The Virtual Server shows a red diamond status in the Configuration Utility. What is the cause?

- A. All pool members are down
- B. All pool members are disabled
- C. HTTPS traffic sent to HTTP Virtual Server
- D. Virtual Server is disabled

Answer: A

Explanation:

A red diamond indicates the Virtual Server is enabled but unavailable due to all pool members being down.

NEW QUESTION # 48

Refer to the exhibit.

DNS queries from two internal DNS servers are being load-balanced to external DNS servers via a virtual server on a BIG-IP device. The DNS queries originate from:

192.168.10.100

192.168.10.200

and target:

192.168.2.150

All DNS queries destined for the external DNS servers fail.

Which property change should the BIG-IP Administrator make in the Virtual Server to resolve this issue?

(Choose one answer)

- A. Source Address to 192.168.10.0/24
- B. Type to Performance (HTTP)
- C. Protocol to UDP
- D. Protocol profile (Client) to DNS_OPTIMIZED

Answer: C

Explanation:

DNS traffic is primarily transported using UDP port 53. In the exhibit, the Virtual Server is configured with the Protocol set to TCP, which prevents standard DNS queries from being processed correctly. BIG-IP Virtual Servers must be configured with the correct Layer 4 protocol to match the application traffic they are handling.

According to the BIG-IP Administration: Data Plane Configuration documentation:

* The Protocol setting on a Virtual Server defines whether traffic is processed as TCP, UDP, or another supported transport protocol.

* Standard DNS queries and responses use UDP, while TCP is only required for DNS zone transfers (AXFR) or exceptionally large responses.

* When a DNS Virtual Server is incorrectly configured with TCP, UDP-based DNS queries are dropped, causing all requests to fail.

Why the other options are incorrect:

* A. Protocol profile (Client) to DNS_OPTIMIZED A DNS profile enhances DNS functionality but does not correct an incorrect transport protocol configuration.

* B. Type to Performance (HTTP) Performance (HTTP) Virtual Servers are designed for HTTP traffic and are not suitable for DNS services.

* C. Source Address to 192.168.10.0/24 The existing source IPs already fall within the allowed range, so this setting does not address the failure.

Correct Resolution:

Changing the Protocol to UDP aligns the Virtual Server with standard DNS transport requirements, allowing DNS queries to be successfully processed and load-balanced.

NEW QUESTION # 49

Some users who connect to a busy Virtual Server have connections reset by the BIG-IP system. Pool member resources are NOT a factor.

What is a possible cause?

- A. Server SSL profile not reconfigured
- B. Connection Rate Limit is set too high
- C. Rewrite profile not configured

- **D. Connection Limit is set too low**

Answer: D

Explanation:

When the connection limit is reached, BIG-IP resets new connections, even if pool members are healthy.

NEW QUESTION # 50

Which Virtual Server type prevents the use of a default pool?

- A. Performance (Layer 4)
- **B. Forwarding (IP)**
- C. Performance (HTTP)
- D. Standard

Answer: B

Explanation:

Forwarding (IP) virtual servers forward traffic based on routing decisions and do not use pools or pool members.

NEW QUESTION # 51

.....

We believe that the greatest value of F5CAB3 training guide lies in whether it can help candidates pass the examination, other problems are secondary. And at this point, our F5CAB3 study materials do very well. We can proudly tell you that the passing rate of our F5CAB3 Exam Questions is close to 100 %. That is to say, almost all the students who choose our products can finally pass the exam. What are you waiting for? Just rush to buy our F5CAB3 learning braindumps!
