## Proven and Recommended Way to Pass Salesforce Slack-Dev-201 Certification Exam

When you click into TrainingDumps's site, you will see so many people daily enter the website. You can not help but be surprised. In fact, this is normal. TrainingDumps is provide different training materials for alot of candidates. They are using our training materials tto pass the exam. This shows that our Salesforce Slack-Dev-201 Exam Training materials can really play a role. If you want to buy, then do not miss TrainingDumps website, you will be very satisfied.

## Salesforce Certified Slack Developer Sample Questions (Q110-Q115):

### NEW QUESTION # 110

A company wants to implement a Slack app for employees to quickly report IT issues. What is the most efficient feature to use for initiating the IT issue reporting process?

- A. Set up a dedicated IT support channel where employees post their issues
- B. Create a bot that employees can message to report IT issues
- C. Use a global shortcut that opens a form for employees to report IT issues

- D. Implement a slash command in various channels for reporting IT issues

**Answer: C**

Explanation:

Use a global shortcut that opens a form for employees to report IT issues A global shortcut is an effective way to allow employees to report IT issues from anywhere in Slack quickly. It ensures that the reporting process is easily accessible and provides a structured form for capturing the necessary details about the issue.

Why not the other options:

\*A dedicated channel can become cluttered and may not offer the quickest response or tracking capabilities.

\*Messaging a bot might be less direct and could require navigating through a conversation to report an issue.

\*A slash command, while useful, requires employees to remember the command and doesn't offer the same level of immediate, structured input as a global shortcut.

### NEW QUESTION # 111

How does a published App Directory app differ from a distributed app in Slack?

- A. Published App Directory apps can be installed in multiple workspaces, but distributed apps are restricted to a single workspace
- B. Distributed apps are exclusively used for internal communication, whereas published App Directory apps are for external stakeholders
- **C. A published App Directory app has been approved by Slack and is listed in the Slack App Directory, whereas a distributed app is not necessarily listed there**
- D. A published App Directory app is only used for specific industries, while a distributed app is for general use across all types of businesses

**Answer: C**

Explanation:

A published App Directory app has been approved by Slack and is listed in the Slack App Directory, whereas a distributed app is not necessarily listed there A published App Directory app differs from a distributed app primarily in its listing status. A published App Directory app has undergone Slack's approval process and is listed in the Slack App Directory, making it publicly discoverable and available for installation by any Slack user. In contrast, a distributed app can be shared across multiple workspaces but is not necessarily listed in the App Directory.

Why not the other options:

\*The categorization of apps is not based on specific industries.

\*The use for internal versus external communication does not define these categories of apps.

\*Both published App Directory apps and distributed apps can be installed across multiple workspaces.

### NEW QUESTION # 112

Why might a developer choose to contain a Slack app to a single workspace?

- A. To ensure maximum exposure and user adoption across a wide range of diverse workspaces
- **B. When the app contains functionality or information that is specific and proprietary to a particular organization's workflow**
- C. For the purpose of testing the app in a live environment with real users from different organizations
- D. To facilitate easier monetization by reaching a larger, more diverse audience across multiple workspaces

**Answer: B**

Explanation:

When the app contains functionality or information that is specific and proprietary to a particular organization's workflow Containing a Slack app to a single workspace is often chosen when the app includes functionality or information that is tailored specifically to the workflows, processes, or data of a particular organization. This ensures that the app remains relevant and useful within the context it was designed for, without exposing proprietary or sensitive information to a broader audience.

Why not the other options:

\*Containing an app to a single workspace limits its exposure and is not suited for widespread adoption.

\*Containing an app to one workspace does not facilitate broader monetization opportunities.

\*Testing with users from different organizations would require distribution beyond a single workspace.

### NEW QUESTION # 113

A company is planning to develop a Slack app that integrates with their external project management system. This app needs to synchronize project updates and allow task assignments within Slack. When should a collaborative team be set up for this development?

- A. As soon as the project is approved
- B. Only during the coding phase of the app
- C. Once user feedback is received post-deployment
- D. After the first version of the app is completed

**Answer: A**

Explanation:

As soon as the project is approved Setting up a collaborative team right from the project's approval ensures that all aspects of the app, from understanding the integration requirements to designing the user interface, are considered and addressed effectively. Early collaboration helps in aligning the app development with the business needs and technical constraints.

Why not the other options:

\*Waiting until the coding phase may lead to overlooking design and integration considerations.

\*Completing the first version without collaboration could result in missing critical functionality and integration needs.

\*Waiting for user feedback post-deployment misses out on the essential collaborative input during development phases.

### NEW QUESTION # 114

You are building a Slack app for an organization that does not allow inbound internet connections due to security policies. Which method of receiving events from Slack would be most appropriate for this app?

- A. Socket Mode using WebSockets
- B. HTTP-based event delivery with a VPN
- C. HTTP-based event delivery with IP whitelisting
- D. HTTP-based event delivery with a publicly accessible endpoint

**Answer: A**

Explanation:

Socket Mode using WebSockets Socket Mode using WebSockets is ideal in environments with strict inbound connection restrictions, as it allows the app to receive events from Slack over a WebSocket connection initiated from within the organization's network.

Why not the other options:

\*HTTP-based event delivery requires a publicly accessible endpoint, which conflicts with the organization's security policies.

\*Using a VPN for HTTP-based event delivery still involves managing inbound connections, which may not be feasible under the organization's security constraints.

\*HTTP-based event delivery with IP whitelisting still requires opening the network for inbound connections, which the organization's policies may not permit.

### NEW QUESTION # 115

.....

If you buy our Slack-Dev-201 training quiz, you will find three different versions are available on our test platform. According to your need, you can choose the suitable version for you. The three different versions of our Slack-Dev-201 study materials include the PDF version, the software version and the online version. We can promise that the three different versions are equipped with the high quality. If you purchase our Slack-Dev-201 Preparation questions, it will be very easy for you to easily and efficiently find the exam focus and pass the Slack-Dev-201 exam.
