

Latest Linux Foundation KCNA Questions - KCNA Questions Pdf

What's more, part of that Prep4sures KCNA dumps now are free: <https://drive.google.com/open?id=1LuCxDizSc4ZGVHflcN5WTjWbA776OK>

Although at this moment, the pass rate of our Linux Foundation KCNA exam braindumps can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our Kubernetes and Cloud Native Associate KCNA Preparation materials win a place in the field of exam question making forever.

You feel tired when you are preparing hard for Linux Foundation KCNA exam, do you know what other candidates are doing? Look at the candidates in IT certification exam around you. Why are they confident when you are nervous about the exam? Is your ability below theirs? Of course not. Have you wondered why other IT people can easily pass Linux Foundation KCNA test? The answer is to use Prep4sures Linux Foundation KCNA questions and answers which can help you sail through the exam with no mistakes. Don't believe it? Do you feel it is amazing? Have a try. You can confirm quality of the exam dumps by experiencing free demo. Hurry up and click Prep4sures.com

>> Latest Linux Foundation KCNA Questions <<

Start Exam Preparation with Prep4sures Linux Foundation KCNA Practice Questions

If you search reliable exam collection materials on the internet and find us, actually you have found the best products for your KCNA certification exams. We are famous for the high pass rate of our KCNA exam materials, that's why many old customers trust us and choose us directly before they have KCNA Exams to attend. Before purchasing we can provide free PDF demo for your downloading so that you can know our product quality deeper and you can purchase KCNA study guide clearly not only replying on your imagination.

Linux Foundation Kubernetes and Cloud Native Associate Sample Questions (Q189-Q194):

NEW QUESTION # 189

You are implementing a GitOps workflow for your Kubernetes cluster. Which of the following best practices should you consider?

- A. Organize your Git repository with a clear directory structure for different namespaces and applications.
- B. Store all your Kubernetes configurations in a single Git repository, regardless of their purpose or scope.
- C. Use a separate Git repository for each Kubernetes resource, such as deployments, services, and ingress.
- D. Ensure that all changes to your Kubernetes configurations are reviewed and approved before being deployed.
- E. Use Git tags to mark specific releases of your Kubernetes configurations.

Answer: A,D,E

Explanation:

Option C promotes organization and maintainability by structuring your repository, while option D enables tracking specific releases through Git tags. Option E emphasizes the importance of code reviews and approvals to ensure the integrity of your deployments. These practices collectively contribute to a robust and well-managed GitOps workflow.

NEW QUESTION # 190

Have a pod 'hello' and a container in that pod 'green'. Which of the following commands would get the logs for that container?

- A. alias k='kubectl'
k logs -p hello green
- B. alias k='kubectl'
k logs -p hello -c green
- C. alias k='kubectl'
k get logs -p hello -c green
- D. alias k='kubectl'
k logs hello -c green

Answer: D

Explanation:

<https://kubernetes.io/docs/reference/generated/kubectl/kubectl-commands#logs>

NEW QUESTION # 191

Fluentd is the only way to export logs from Kubernetes cluster or applications running in cluster

- A. True
- B. False

Answer: B

Explanation:

<https://github.com/cncf/landscape#trail-map>

NEW QUESTION # 192

Which command lists the running containers in the current Kubernetes namespace?

- A. kubectl ps
- B. kubectl get pods
- C. kubectl ls
- D. kubectl show pods

Answer: B

Explanation:

The correct answer is A: kubectl get pods. Kubernetes does not manage "containers" as standalone top-level objects; the primary schedulable unit is the Pod, and containers run inside Pods. Therefore, the practical way to list what's running in a namespace is to list the Pods in that namespace. kubectl get pods shows Pods and their readiness, status, restarts, and age-giving you the canonical view of running workloads.

If you need the container-level details (images, container names), you typically use additional commands and output formatting:

* kubectl describe pod <pod> to view container specs, images, states, and events

* kubectl get pods -o jsonpath=... or -o wide to surface more fields

* kubectl get pods -o=json to inspect .spec.containers and .status.containerStatuses But among the provided options, kubectl get pods is the only real kubectl command that lists the running workload objects in the current namespace.

The other options are not valid kubectl subcommands: kubectl ls, kubectl ps, and kubectl show pods are not standard Kubernetes CLI operations. Kubernetes intentionally centers around the API resource model, so listing resources uses kubectl get <resource>. This also aligns with Kubernetes' declarative nature: you observe and manage the state via API objects, not by directly enumerating OS-level processes.

So while the question says "running containers," the Kubernetes-correct interpretation is "containers in running Pods," and the appropriate listing command in the namespace is `kubectl get pods`, option A.

NEW QUESTION # 193

What is the practice of bringing financial accountability to the variable spend model of cloud resources?

- **A. FinOps**
- B. CloudCost
- C. DevOps
- D. FaaS

Answer: A

Explanation:

The practice of bringing financial accountability to cloud spending-where costs are variable and usage-based-is called FinOps, so D is correct. FinOps (Financial Operations) is an operating model and culture that helps organizations manage cloud costs by connecting engineering, finance, and business teams. Because cloud resources can be provisioned quickly and billed dynamically, traditional budgeting approaches often fail to keep pace. FinOps addresses this by introducing shared visibility, governance, and optimization processes that enable teams to make cost-aware decisions while still moving fast.

In Kubernetes and cloud-native architectures, variable spend shows up in many ways: autoscaling node pools, over-provisioned resource requests, idle clusters, persistent volumes, load balancers, egress traffic, managed services, and observability tooling. FinOps practices encourage tagging/labeling for cost attribution, defining cost KPIs, enforcing budget guardrails, and continuously optimizing usage (right-sizing resources, scaling policies, turning off unused environments, and selecting cost-effective architectures). Why the other options are incorrect: FaaS (Function as a Service) is a compute model (serverless), not a financial accountability practice. DevOps is a cultural and technical practice focused on collaboration and delivery speed, not specifically cloud cost accountability (though it can complement FinOps). CloudCost is not a widely recognized standard term in the way FinOps is. In practice, FinOps for Kubernetes often involves improving resource efficiency: aligning requests/limits with real usage, using HPA/VPA appropriately, selecting instance types that match workload profiles, managing cluster autoscaler settings, and allocating shared platform costs to teams via labels/namespaces. It also includes forecasting and anomaly detection, because cloud-native spend can spike quickly due to misconfigurations (e.g., runaway autoscaling or excessive log ingestion). So, the correct term for financial accountability in cloud variable spend is FinOps (D).

NEW QUESTION # 194

.....

Three formats of Linux Foundation KCNA practice material are always getting updated according to the content of real Linux Foundation KCNA examination. The 24/7 customer service system is always available for our customers which can solve their queries and help them if they face any issues while using the KCNA Exam product. Besides regular updates, Prep4sures also offer up to 1 year of free real Kubernetes and Cloud Native Associate (KCNA) exam questions updates.

KCNA Questions Pdf: <https://www.prep4sures.top/KCNA-exam-dumps-torrent.html>

Get the Most Recent Linux Foundation KCNA Exam Questions for Guaranteed Success: It would be really helpful to purchase Kubernetes and Cloud Native Associate (KCNA) exam dumps right away, With the high-relevant and perfect accuracy of KCNA Questions Pdf- Kubernetes and Cloud Native Associate training dumps, lots of IT candidates has passed their KCNA Questions Pdf- Kubernetes and Cloud Native Associate exam test successfully, Linux Foundation Latest KCNA Questions To cater to the needs of exam candidates, our experts have been assiduously worked for their quality day and night.

All teams involved need to understand that test script Intereactive KCNA Testing Engine automation doesn't happen automatically, no matter what the vendor claims, By using the powerful features in Excel to build lists of file names Intereactive KCNA Testing Engine in large numbers and use Automator to process those lists into hundreds of folders in minutes.

2026 Latest KCNA Questions | Pass-Sure KCNA Questions Pdf: Kubernetes and Cloud Native Associate 100% Pass

Get the Most Recent Linux Foundation KCNA Exam Questions for Guaranteed Success: It would be really helpful to purchase Kubernetes and Cloud Native Associate (KCNA) exam dumps right away.

With the high-relevant and perfect accuracy KCNA of Kubernetes and Cloud Native Associate training dumps, lots of IT candidates has passed their Kubernetes and Cloud Native Associate exam test successfully, To cater to the needs of exam Latest KCNA Questions candidates, our experts have been assiduously worked for their quality day and night.

And Prep4sures provides 365 days updates, Our KCNA real dumps materials are always imitated all the time, but never be surpassed.
