

HPE6-A78 Real Dumps | HPE6-A78 Dump

P.S. Free 2026 HP HPE6-A78 dumps are available on Google Drive shared by PDF4Test: <https://drive.google.com/open?id=1ekkk19T82WNuUTju81T2tX-s0FgAO8PM>

Certification has become a prerequisite for employment and career growth in the HP industry for reputable companies. To advance comfortably in your career, passing the HPE6-A78 exam is a valuable validation of your expertise. However, many test takers struggle to find updated Aruba Certified Network Security Associate Exam (HPE6-A78) dumps and fail to prepare effectively in a short period, resulting in a loss of time, money, and motivation.

HPE6-A78 certification exam is a comprehensive test of an individual's knowledge and skills in network security. It is designed to test an individual's ability to design secure wireless networks, configure and troubleshoot network security solutions, and implement policies for securing wireless networks. Aruba Certified Network Security Associate Exam certification provides IT professionals with a credential that demonstrates their expertise and commitment to network security, which is highly valued by employers in today's competitive job market.

HP HPE6-A78 Dump, HPE6-A78 Actual Exam Dumps

If you are willing to buy our HPE6-A78 dumps pdf, I will recommend you to download the free dumps demo first and check the accuracy of our HPE6-A78 practice questions. Maybe there are no complete HPE6-A78 study materials in our trial, but it contains the latest questions enough to let you understand the content of our HPE6-A78 Braindumps. Please try to instantly download the free demo in our exam page.

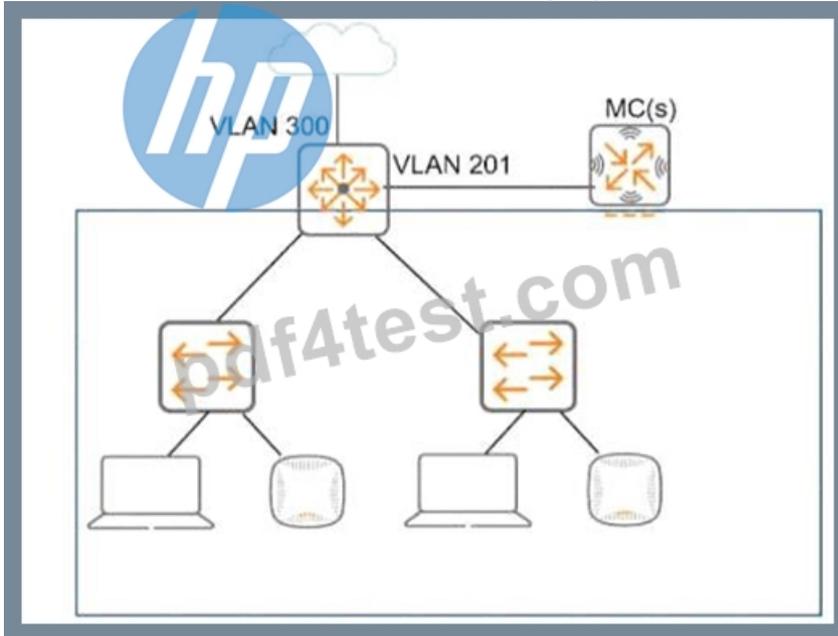

To prepare for the HPE6-A78 exam, candidates can participate in Aruba training courses, attend webinars, and read Aruba product documentation. They can also use third-party study materials such as practice exams, study guides, and online forums. It is essential to have hands-on experience in configuring and managing Aruba network security solutions to pass the exam successfully.

HPE6-A78 exam consists of 60 multiple-choice questions that must be answered within 90 minutes. HPE6-A78 Exam is available in English and costs \$200. The passing score for the exam is 65%. HPE6-A78 exam can be taken at any Pearson VUE testing center, and candidates must register for the exam on the Pearson VUE website.

HP Aruba Certified Network Security Associate Exam Sample Questions (Q169-Q174):

NEW QUESTION # 169

Refer to the exhibit, which shows the current network topology.

You are deploying a new wireless solution with an Aruba Mobility Master (MM), Aruba Mobility Controllers (MCs), and campus APs (CAPs). The solution will include a WLAN that uses Tunnel for the forwarding mode and implements WPA3-Enterprise security. What is a guideline for setting up the VLAN for wireless devices connected to the WLAN?

- A. Assign the WLAN to a single new VLAN which is dedicated to wireless users
- B. Use wireless user roles to assign the devices to different VLANs in the 100-150 range
- C. Use wireless user roles to assign the devices to a range of new VLAN IDs.
- D. Assign the WLAN to a named VLAN which specified 100-150 as the range of IDs.

Answer: B

Explanation:

When setting up VLANs for a wireless solution with an Aruba Mobility Master (MM), Aruba Mobility Controllers (MCs), and campus APs (CAPs), it is recommended to use wireless user roles to assign devices to different VLANs. This allows for greater flexibility and control over network resources and policies applied to different user groups. Wireless user roles can dynamically assign devices to the appropriate VLAN based on a variety of criteria such as user identity, device type, location, and the resources they need to access. This approach aligns with the ArubaOS features that leverage user roles for network access control, as detailed in Aruba's configuration and administration guides.

NEW QUESTION # 170

What is the purpose of an Enrollment over Secure Transport (EST) server?

- A. It helps admins to avoid expired certificates with less management effort.
- B. It provides a more secure alternative to private CAs at less cost than a public CA.
- C. It acts as an intermediate Certification Authority (CA) that signs end-entity certificates.
- D. It provides a secure central repository for private keys associated with devices' digital certificates.

Answer: A

Explanation:

EST (Enrollment over Secure Transport) is a protocol designed to streamline the certificate management process. It enables automated and secure enrollment, renewal, and revocation of digital certificates, which significantly reduces the management overhead typically associated with digital certificates. With EST, administrators can more easily manage certificates' lifecycle, ensuring that expired certificates are promptly replaced or renewed without significant manual intervention.

NEW QUESTION # 171

You have been asked to find logs related to port authentication on an ArubaOS-CX switch for events logged in the past several hours. But, you are having trouble searching through the logs. What is one approach that you can take to find the relevant logs?

- A. Configure a logging filter for the "port-access" category, and apply that filter globally.
- B. Enable debugging for "portaccess" to move the relevant logs to a buffer.
- C. Specify a logging facility that selects for "port-access" messages.
- **D. Add the "-C and *-c port-access" options to the "show logging" command.**

Answer: D

NEW QUESTION # 172

A company has Aruba Mobility Controllers (MCs), Aruba campus APs, and ArubaOS-Switches. The company plans to use ClearPass Policy Manager (CPPM) to classify endpoints by type. This company is using only CPPM and no other ClearPass solutions.

The ClearPass admins tell you that they want to use HTTP User-Agent strings to help classify endpoints. What should you do as a part of configuring the ArubaOS-Switches to support this requirement?

- A. Create a device fingerprinting policy that includes HTTP, and apply the policy to edge ports.
- B. Create remote mirrors that collect traffic on edge ports, and mirror it to CPPM's IP address.
- **C. Configure CPPM as the sFlow collector, and make sure that sFlow is enabled on edge ports.**
- D. Connect the switches to CPPM's span ports, and set up mirroring of HTTP traffic on the switches.

Answer: C

Explanation:

ArubaOS-Switches can use sFlow technology to sample network traffic and send the samples to a collector, such as ClearPass Policy Manager (CPPM), for analysis. sFlow can be configured to capture various types of traffic, including HTTP, which typically contains User-Agent strings that can be used for device fingerprinting and classification.

To support the requirement for using HTTP User-Agent strings to classify endpoints, the switches would need to be configured to send sFlow samples containing HTTP traffic to CPPM. CPPM would then analyze these samples and use the User-Agent strings to classify the devices.

Therefore, the correct action to configure ArubaOS-Switches would involve:

Configuring CPPM as the sFlow collector on the switches.

Enabling sFlow on the edge ports that connect to endpoints.

This approach allows the network traffic to be analyzed by CPPM without requiring any additional mirroring or redirection of traffic, which would be resource-intensive and potentially disruptive to network performance.

NEW QUESTION # 173

What is symmetric encryption?

- A. It simultaneously creates ciphertext and a same-size MAC.
- **B. It uses the same key to encrypt plaintext as to decrypt ciphertext.**
- C. It uses a Key that is double the size of the message which it encrypts.
- D. It any form of encryption that ensures that the ciphertext is the same length as the plaintext.

Answer: B

NEW QUESTION # 174
