## **CompTIA DS0-001 CompTIA DataSys+ Certification Exam Exam Questions Get Excellent Scores**

Everyone has different learning habits, DS0-001 exam simulation provide you with different system versions: PDF version, Software

version and APP version. Based on your specific situation, you can choose the version that is most suitable for you, or use multiple versions at the same time. After all, each version of DS0-001 Preparation questions have its own advantages. If you are very busy, you can only use some of the very fragmented time to use our DS0-001 study materials. And each of our DS0-001 exam questions can help you pass the exam for sure.

## CompTIA DataSys+ Certification Exam Sample Questions (Q33-Q38):

### NEW QUESTION # 33

What combination of backup strategies provides the fastest backup restoration time?

- **A. Full backups and differential backups**
- B. Full backups and incremental backups
- C. Partial backups and incremental backups
- D. Incremental backups and differential backups

**Answer: A**

### NEW QUESTION # 34

A business analyst is using a client table and an invoice table to create a database view that shows clients who have not made purchases yet. Which of the following joins is most appropriate for the analyst to use to create this database view?

- A. RIGHT JOIN ON Client.Key = Invoice.Key WHERE BY Client.Key IS NULL
- **B. LEFT JOIN ON Client.Key = Invoice.Key WHERE BY Invoice.Key IS NULL**
- C. LEFT JOIN ON Client.Key = Invoice.Key
- D. INNER JOIN ON Client.Key = Invoice.Key

**Answer: B**

Explanation:

The join that is most appropriate for the analyst to use to create this database view is option D.

This join uses the LEFT JOIN clause to combine the client table and the invoice table based on the matching values in the Key column. The WHERE clause filters out the rows where the Invoice.Key column is not null, meaning that the client has made a purchase. The result is a view that shows only the clients who have not made any purchases yet. The other options either do not produce the desired result or have syntax errors. For example, option A would show only the clients who have made purchases, option B would show only the invoices that do not have a matching client, and option C would show all the clients regardless of their purchase status.

### NEW QUESTION # 35

Over the weekend, a company's transaction database was moved to an upgraded server. All validations performed after the migration indicated that the database was functioning as expected. However, on Monday morning, multiple users reported that the corporate reporting application was not working.

Which of the following are the most likely causes? (Choose two.)

- A. The new database server has its own reporting system, so the old one is not needed.
- B. The reporting jobs that could not process during the database migration have locked the application.
- C. The reporting application cannot keep up with the new, faster response from the database.
- **D. The reporting application's mapping to the database location was not updated.**
- E. The database server is not permitted to fulfill requests from a reporting application.
- **F. The access permissions for the service account used by the reporting application were not changed.**

**Answer: D,F**

Explanation:

The most likely causes of the reporting application not working are that the access permissions for the service account used by the reporting application were not changed, and that the reporting application's mapping to the database location was not updated. These two factors could prevent the reporting application from accessing the new database server. The other options are either irrelevant or unlikely to cause the problem.

### NEW QUESTION # 36

A database administrator would like to create a table named XYZ. Which of the following queries should the database administrator use to create the table?

- A. 

```
Append Table XYZ(  
column1 datatype;  
column2 datatype);
```
- B. 

```
Select Table XYZ(  
column1 datatype,  
column2 datatype);
```
- C. 

```
Create Table XYZ(  
column1 datatype;  
column2 datatype);
```
- D. 

```
Create Table XYZ(  
column1 datatype,  
column2 datatype);
```

**Answer: D**

Explanation:

The query that the administrator should use to create the table is option B. This query uses the CREATE TABLE statement to define a new table named XYZ with three columns: ID, Name, and Age. Each column has a data type and a constraint, such as NOT NULL, PRIMARY KEY, or CHECK. The other options either have syntax errors, use incorrect keywords, or do not specify the table name or columns correctly.

### NEW QUESTION # 37

Which of the following are logical infrastructure security measures? (Choose two.)

- A. Time locks
- B. Firewall
- C. Strong passwords
- D. Camera systems
- E. Port security
- F. Key cards

**Answer: B,C**

Explanation:

Firewalls and strong passwords are logical security measures that protect digital infrastructure by controlling access and authentication.

### NEW QUESTION # 38

.....

Our company can provide the anecdote for you--our DS0-001 study materials. Under the guidance of our DS0-001 exam practice, you can definitely pass the exam as well as getting the related certification with the minimum time and efforts. We would like to extend our sincere appreciation for you to browse our website, and we will never let you down. The advantages of our DS0-001 Guide materials are too many to count and you can free download the demos to have a check before purchase.
